PREFACE

This report presents the results of the 2007 Informal Sector Survey (ISS) that was conducted from March to July 2007. This is the second survey to be undertaken in Botswana. The first one was conducted in 1999.

The purpose of the ISS was to provide up-to-date information to policy makers, researchers and program managers, for them to use during the planning, implementation, monitoring and evaluation of the informal sector in Botswana. The main objectives were to collect data that would provide information required to shed light on; size of the informal sector employment; contribution of the informal sector to the economy; common activities in the informal sector and proportion of household income generated by the informal sector.

The definition of the informal sector during the survey was in accordance with the 1993 System of National Accounts (1993 SNA), which defines informal sector businesses by a number of attributes, such as: non registration of a company with the Registrar of Companies or legal professionals; informal accounts or none; 5 or less paid employees; expenditure not easily distinguishable from household ones; enterprise often temporary or mobile or in owner's home. Paid domestic workers and subsistence farming were excluded from the informal sector definition.

The report is divided into the following chapters; Chapter 1 which gives general information about the survey, Chapter 2 presents the socio-economic information on households that own businesses, Chapter 3 describes characteristics of business households and Chapter 4 gives information about informal sector businesses.

All efforts have been made to include as many tables as possible in the report, but given the nature of this survey we could not accommodate all users' needs. However, users are free to request for more detailed tables according to their needs.

ACKNOWLEDGEMENT

I would like to take this opportunity to express my appreciation to all those who made the 2007 Informal Sector Survey (ISS) possible. I am grateful to the efforts of officials at both the General Government and the private sector (Technical working group, Reference group, CSO staff) who supported the survey.

Finally, I highly appreciate all field staff and more importantly, the survey respondents whose participation was important to the success of the survey and all other whose input led to the successful completion of the survey, in one way or the other.

BACKGROUND

The 2007 Informal Sector Survey is a national representative survey. This is the second ISS survey conducted by the CSO as part of its household survey program. The primary purpose of the survey is to provide policymakers and planners with information on the size of the informal sector, characteristics of the informal sector operators, the number of people employed in the informal sector and difficulties faced by informal sector operators in Botswana

BUSINESSES IN THE INFORMAL SECTOR

Survey results indicate that the number of informal sector businesses in Botswana is estimated at 40,421. This is an increase of *72.3 percent* compared to the 1999 ISS which estimated 23,454 informal businesses. Informal business are mostly found in cities/towns and urban villages than in rural areas. Majority of informal businesses are operated by females (*67.6 percent*) than men (*32.4 percent*). Education has a marked effect on operators of informal businesses, with those with no or less education more likely to run an informal sector business.

The results further indicated that the majority of informal sector business operators are engaged in “Wholesale & Retail Trade” at *40.5 percent*, followed by “Real Estate” at *20.3 percent*. Most of the operators started their businesses from their own savings (*80.8 percent*) with very few (*1.3 percent*) getting help from “Commercial Banks”.

DIFFICULTIES FACED BY INFORMAL BUSINESS OPERATORS

Quite a number (*38.1 percent*) of informal business operators cited “Non-payment of goods & services supplied on credit” to their customers. This is a shift as compared to the 1999 ISS which cited “Unavailability of credit facilities” as the major problem. “High competition” and “Lack of capital” were also mentioned as some of the difficulties experienced by informal business operators at *20.3* and *15.6 percent* respectively.

INFORMAL SECTOR EMPLOYEES

The 2007 Informal Sector Survey shows that there were 16,980 persons employed (excludes business owners) by the sector in Botswana. A large number (*66.8 percent*) of them were aged 20-34 years old. Furthermore, most of the employees (*76.1 percent*) were “Never married”; followed by “Married”.

1 INTRODUCTION

The informal sector plays a critical role in the economic structure of many developing countries. In most countries, informal sector enterprises are an important provider of employment and income opportunities in both rural and urban areas. As in any other developing countries, the informal sector in Botswana has expanded very fast over the years. Any policy decision concerning the informal sector in Botswana requires accurate information about the size, structure and contribution of the sector to employment and Gross Domestic Product (GDP). In particular, there is need to know the number, size of informal sector enterprises, their sectoral distribution and where to find them. Therefore there is a need for policy makers to be aware of the extent of its growth, gains and challenges as to make evidence based decisions in order to support and sustain the sector.

Accurate information of the informal sector in Botswana had been a problem prior to the first ever Informal Sector Survey conducted in the 1999/2000. Based on the first survey, a decision was made to continuously conduct the ISS as part of CSO's on-going household survey programs to update the informal sector data. It was therefore necessary to conduct the second survey in 2007 to update information on the informal sector. This report presents the field survey findings of the 2007 Informal Sector Survey.

1.1 Survey Objectives

The 2007 Informal Sector Survey was carried out to provide information on the characteristics of informal sector, number of businesses engaged in the informal sector, contribution of the informal sector to the economy and economic activities carried out in the informal sector.

The specific objectives were:

- To establish the number of persons employed in the informal sector at the national level.
- To estimate the contribution of the informal sector to Gross Domestic Product (GDP).
- To identify economic activities done in the informal sector
- To identify the location of informal sector enterprises.
- To identify difficulties faced by informal sector business operators.

1.2 Organization and Methodology of the survey

1.2.1 The Survey sample

The 2007 Informal Sector Survey was designed to allow estimates at the national and districts levels. A stratified two-stage probability sample design was used in sample (business households) selection. The first stage was the selection of Enumeration Areas (EAs) from a total of 3,201 EAs as per the 2001 Population and Housing Census. A total of 562 EAs were selected and enumerated. At the second stage of sampling, business households were systematically selected from a fresh list of occupied business households prepared at the beginning of the survey field work (i.e. listing of business households in the selected EAs). Overall 6,467 business households were systematically selected and 6,115 responded, which yielded a household response rate of *94.6 percent*. Within the 6,115 completed households 6,335 eligible respondents were identified as informal sector respondents, of which 5,650 were successfully interviewed, yielding an individual response rate of *89.2 percent*.

1.2.2 Questionnaires

Two questionnaires were used for the 2007 ISS, namely the Household Questionnaire and the Individual Questionnaire; all were in English.

The Household Questionnaire was used to record all the usual members and visitors in the household. The main purpose of the Household Questionnaire was to identify people who were eligible for the individual interview. Some basic information was collected on the characteristics of each person listed, including age, sex, education and relation to the head of the household.

The Individual Questionnaire collected information on the persons who were self-employed. Questions asked were on the registration of business; number of people who usually work in the business; whether the business kept formal set of accounts and their place of operations, among others. The information was used to identify operators of businesses in the informal sector. The operators were asked questions on the following:

- Source of capital
- Difficulties they faced
- Technical assistance needed
- Source of raw material
- Number of people employed

Both questionnaires were pre-tested before finalized and administered to the respondents.

1.2.3 Training of Field Staff

The CSO recruited and trained staff to serve as supervisors, enumerators, coders and editors. Training took three weeks and it included lectures, presentations, practical demonstration of interviewing in small groups as well as field practice.

1.2.4 Field work

Twelve data collection teams began work beginning of March 2007 and completed in July 2007. A team consisted of two enumerators, one supervisor and one driver. Field supervision was coordinated from CSO; Quality control teams routinely visited teams to review their work and monitor quality of data collected.

1.2.5 Response rates

Household and individual response rates are depicted in Table 1-1 below. A total of 10,246 business households were identified, of which 6,467 households were selected. Of the 6,467 selected households, 6,115 were successfully interviewed. In these interviewed households, 6,335 people were identified as eligible for the individual questionnaire, of which 5,650 were interviewed, yielding a response rate of *89.2 percent*.

2 BUSINESS HOUSEHOLDS CHARACTERISTICS

This chapter presents information on the socioeconomic characteristics of the business households and the individual survey respondents such as age, sex, education etc.

2.1 Total Population in business Households

Table 2-1 shows that total population in business households as estimated by the 2007 Informal Sector Survey was 224,230. Compared with the 1999 Informal Sector Survey, there was an increase of 1,623 persons (*0.7 percent*) from 222,607. Of the 224,230 population, females constituted *54.0 percent*. The results further indicate that *38.6 percent* of persons living in business households as per the 2007 Survey were more concentrated in urban villages, followed by Cities/towns with *36.5 percent*. The majority of those residing in urban areas were females with *54.4 percent*.

Table 2-1: Total population in Business Households by Region and Sex - 2007 and 1999

Region	2007				1999			
	Male	Female	Total	Percent	Male	Female	Total	Percent
Cities/Towns	38,355	43,585	81,940	36.5	36,837	43,172	80,009	35.9
Urban	39,455	46,988	86,443	38.6	35,193	44,488	79,681	35.8
Rural	25,441	30,406	55,847	24.9	27,573	35,344	62,917	28.3
Total	103,251	120,979	224,230	100.0	99,603	123,004	222,607	100.0

About 117,059 (*58.4 percent*) of the total population aged 5 years and over stated that they have left school, followed by those still attending by 64,844 (*32.3 percent*), see Table 2.6.

2.2 Currently Employed in business Households

Employed persons refers to those who did some work in the reference period either for payment in cash or in kind (paid employees) or who were in self employment for profit or family gain as well as persons temporarily absent from these activities but definitely going to return to them (e.g. on leave or sick). Some work was defined as one hour or more in engagement in an activity within the reference period of seven days. It should be noted that any economic work took precedence over all other activities.

2.2.1 Currently Employed

There were 77,241 employed persons aged 12 years and over in the business households estimated by the 2007 Survey, an increase of 8,858 (13.0 percent) when compared to the 1999 Informal Sector Survey figure. About 33,818 or 43.8 percent of the employed were males and 43,423 (56.2 percent) were females. Amongst the employed population, 43.8 percent were “Employees”, followed by “Self-Employed without Employees” with 36.8 percent. There were more females (75.0 percent) among the “Self-employed without employees”, see Table 2.10.

2.2.2 Currently Employed by Industry

Figure 2-1 and Table 2.11 shows the comparison of male and female employees’ distribution by industry. The main employers of business household’s members were “Wholesale & Retail Trade” (27.4 percent), Real Estate (12.3 percent) and “Manufacturing” with 10.0 percent.

Women dominance was in “Private Households” (88.1 percent), “Hotels & Restaurant” (77.1 percent), “Wholesale & Retail Trade” (72.2 percent) and “Education” with 67.4 percent. Males dominated in industries such as “Construction” (91.2 percent), Mining (82.3 percent), “Water & Electricity” (75.9 percent), and “Agriculture” with 71.8 percent.

Figure 2-1: Currently Employed Population in the Business Households by Industry

Furthermore, Table 2.11 shows that majority of the persons reported as employees were found in “Public Administration” (20.1 percent) industry, followed by “Retail Trade” with 14.6 percent and “Education” with 9.2 percent. Among the “Self-Employed without Employees”, “Wholesale & Retail Trade” dominated by 42.3 percent, followed by “Real Estate” with 18.7 percent.

2.2.3 Currently Employed by Occupation

The most common occupations among the employed population in the business households as depicted in Figure 2-2 were “Service Workers” which accounted for 24.7 percent, followed by “Elementary Occupations” (18.6 percent) and “Admin/Managers” (16.3 percent). Among the “Service Workers”, females accounted for 73.3 percent.

Figure 2-2: Currently Employed Population in the Business Households by Occupation

The majority of male Self-employed (36.0 percent) worked as “Admin/Managers”, followed by those in “Craft & Related Workers” with 21.6 percent. Furthermore, most of female self-employed contributed 38.7 percent in the “Service Workers” followed by those in “Admin/Managers” with 21.3 percent (Also see Table 2.10).

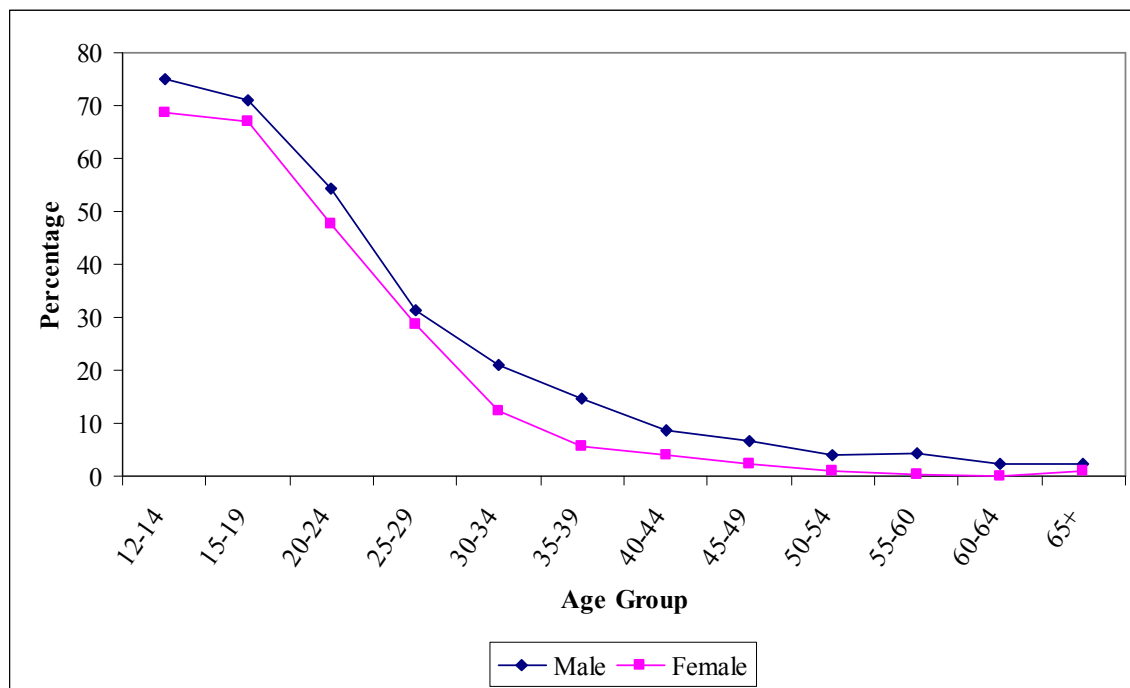

2.3 Currently unemployed in business Households

Unemployed persons are those individuals who did not do any work in the reference period (last 7 days) either for payment in cash or kind or who were not in self-employment for profit or family gain, but willing to work, available to work and actively seeking work. This excludes individuals who were temporarily absent from the above-mentioned activities and were definitely going to return to them.

The total economically active population known as Labour Force (i.e. employed and unemployed) in business households was 96,808, of which 19,567 were unemployed. The 2007 Informal Sector Survey unemployment rate was 20.2 percent, higher than the 17.5 percent estimated in the 1999 Informal Sector Survey. Furthermore, the result show that the majority of the unemployed were males (23.6 percent); refer to Table 2.22.

The distribution of unemployment rates by age groups in the business households are illustrated in Figure 2-3 and also shown in Table 2.23. A significant number of the unemployed persons were aged below 30 years (43.7 percent) with the dominant age groups being 12-14 (71.7 percent), 15-19 (69.0 percent) and 20-24 (50.9 percent).

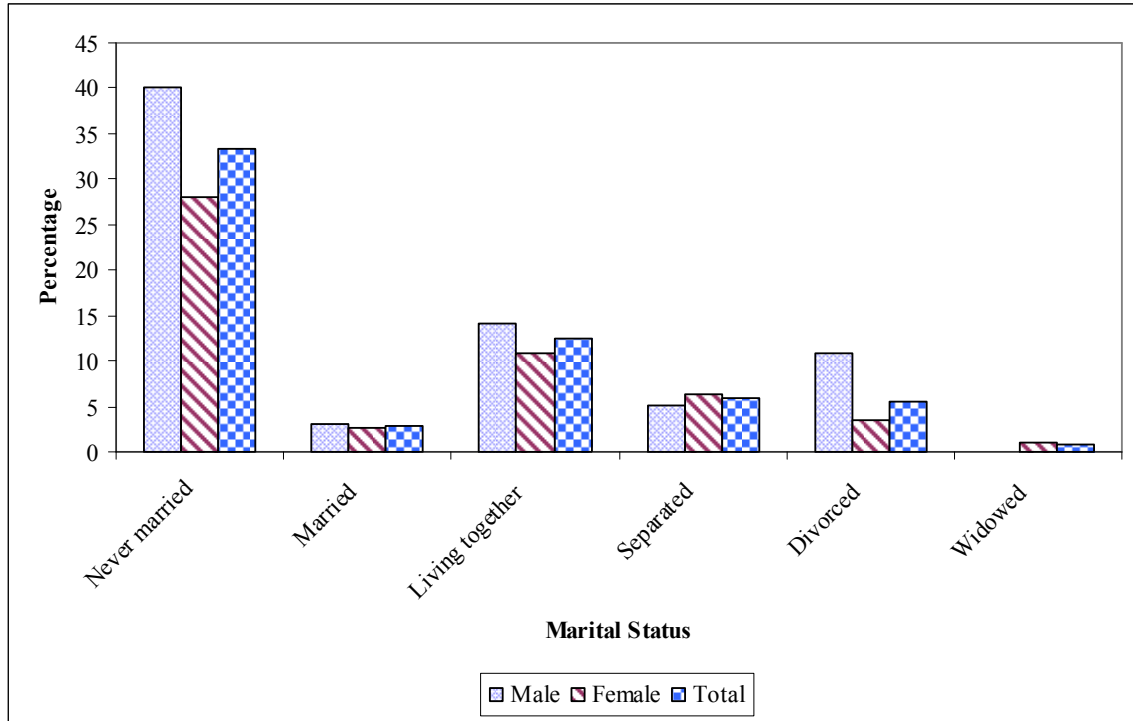

Figure 2-3: Unemployment rate by Age Group and Sex

The unemployment rate in business households according to marital status and sex are displayed in Figure 2-4. Most of the unemployed reported that they were “Never Married”

(33.4 percent), followed by the “Living together” with 12.4 percent. Males dominated in the “Never Married” and “Living Together” categories with 40.2 and 14.0 percent respectively.

Figure 2-4: Unemployment rate by Marital Status and Sex

3 HOUSEHOLD ENTERPRISES' CHARACTERISTICS

This Section outlines various characteristics of household enterprises/businesses in Botswana. The businesses consist of both formal and informal enterprises. There are two types of activities done by the enterprises; Main and Secondary activities. The Main business activity is the one which normally earns or generate more income or revenue than the other. Secondary activity is not the major source of income but comes second after the main in terms of income generated.

3.1 Household Enterprises

The 2007 Informal Sector Survey estimated the total number of enterprises as 44,277 of which 28,183 (*63.7 percent*) were owned by females. The number of enterprises increased by *54.1 percent* as compared to 28,726 enterprises estimated by the 1999 Informal Sector Survey; refer to Table 3.1.

3.1.1 Household Enterprises by Industry

The majority of enterprises were found in the “Wholesale & Retail” with 17,610 (*39.8 percent*), followed by “Real Estate”, “Manufacturing” and “Hotels & Restaurant” with *20.2*, *11.9* and *8.3 percent* respectively. Females dominate in almost all the industries except “Construction”, “Transport” and “Health & Social Work”; refer to Table 3.1.

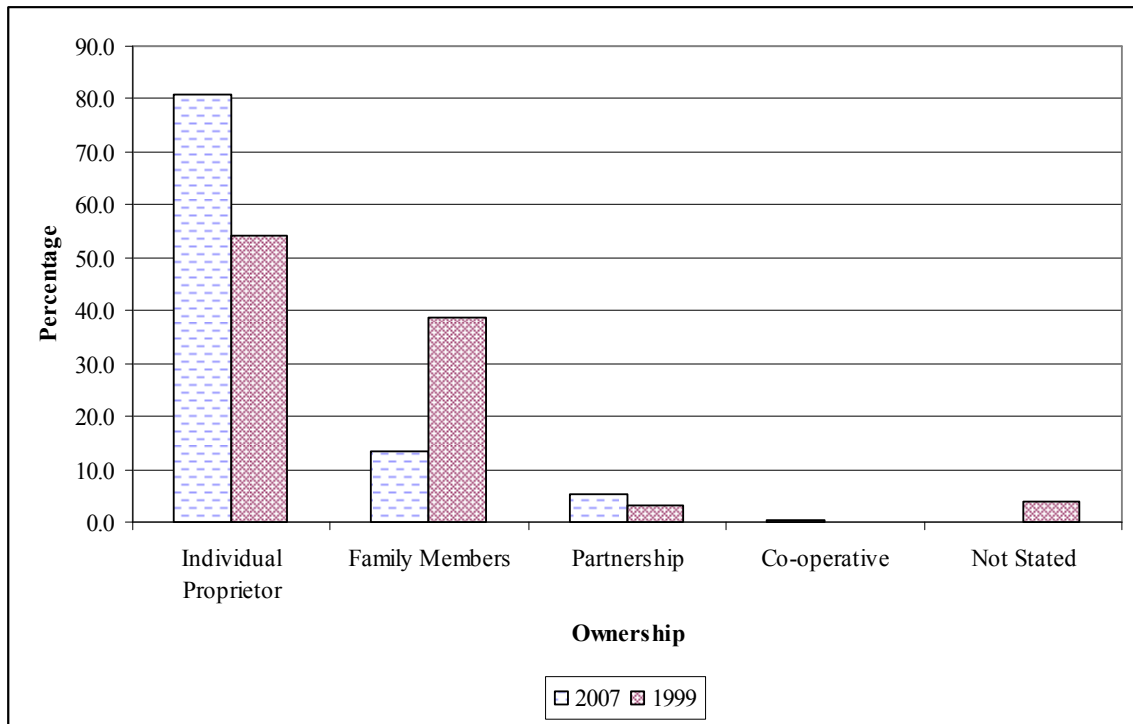

3.1.2 Household Enterprises by District

As depicted in Table 3.2, the majority of the enterprises were found in Gaborone (*22.6 percent*), followed by Kweneng East with *14.7 percent* while Francistown constituted *10.8 percent*. Other districts accounted for less than *5 percent*.

3.1.3 Household Enterprises by Ownership

Distribution of individual enterprises by ownership indicates that *81.0 percent* of businesses are owned by “Individual Proprietors”, “Family Members” ownership contributed *13.4 percent* while “Partnership” constituted *5.4 percent*. The same pattern as above was observed in the 1999 Informal Sector Survey. A graphical presentation of household enterprises by ownership is shown in Figure 3-1.

Figure 3-1: Ownership of Business – 2007 and 1999

3.1.4 Place of Operation of Business

Figure 3-2 shows business place of operation. Most of the businesses (*54.1 percent*) are operated “Within Own Home”, followed by “In Another Permanent building” with *13.2 percent* and *8.1 percent* were operating “On a Footpath, Street or Open Space”. (Also refer to Table 3.4).

Figure 3-2: Business by Place of Operation - 2007

3.1.5 Usual employment

As shown in Table 3.5, *71.7 percent* of the business enterprises under the main activity had “no employees”; *19.1 percent* had “1 to 5 employees” and *9.2 percent* had “more than 5 employees”. The majority (*73.2 percent*) of businesses with “no employees” were operated by females.

3.1.6 Usual Months of Business Operation

The survey results indicate that the majority (*79.9 percent*) of Business Enterprises reported that they usually operate the whole year, with more than half of the operators being females (*63.7 percent*); refer to Table 3.6.

3.1.7 Reasons of Operating Less Than 12 months

As presented in Table 3.7, the major cause of operating a business enterprise less than 12 months was because they were fairly new; constituting *80.1 percent*. This was followed by Seasonal factors with *9.8 percent*.

4 INFORMAL SECTOR BUSINESSES

The chapter summarizes the results of the informal sector businesses after screening all the formal enterprises. More detailed information, among others; place of operation; source of capital; difficulties affecting operation is presented.

4.1 GENERAL INFORMATION

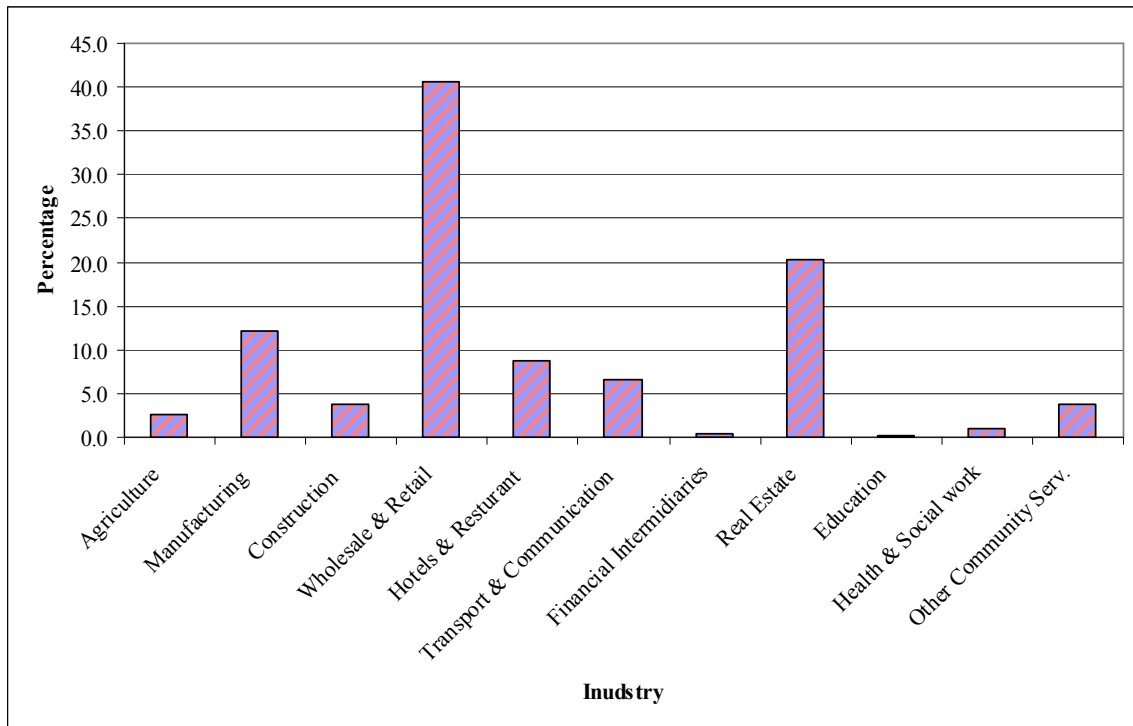

After screening all non-informal enterprises, the 2007 Informal Sector Survey estimated the total number of informal businesses as 40,421, of which *67.6 percent* were owned by females and *32.4 percent* by males. The number of informal business enterprises increased by *72.3 percent* as compared to 23,454 businesses estimated by the 1999 Informal Sector Survey. The significant increase could be attributable to the decline in the formal employment opportunities in the economy, and the establishment of various industry support agencies by the government.

4.1.1 Informal Business by Industry

Most of the businesses 16,384 (*40.5 percent*) were in “Wholesale & Retail Trade” industry; followed by “Real Estate” with *20.3 percent* and “Manufacturing” with *12.2 percent*. This trend was also observed in the 1999 Informal Sector Survey. This reveals that a pronounced majority of the informal sector enterprises are active in the tertiary sector, especially in trade. This is not surprising, given that primary and secondary activities require a large amount of initial investment capital, which is often not affordable to informal enterprises. Interestingly, the 2007 ISS shows that a significant number of informal enterprises are engaged in secondary activities such as manufacturing and construction.

Female ownership dominated in almost all the industries except in “Construction” and, “Health & Social Services”; refer to Table 4.1.

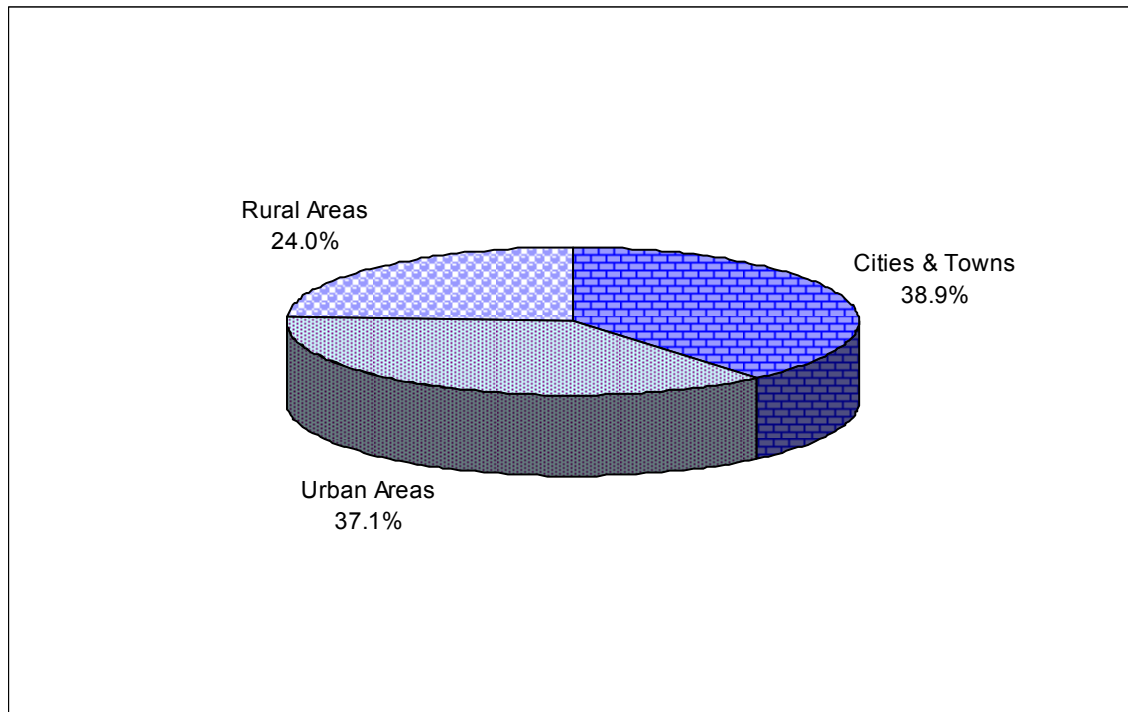

Figure 4-1: Informal Businesses by Industry – 2007

4.1.2 Informal Business by Region and District

Informal sector activities turn to be more concentrated in cities & towns, and urban villages recording *38.9* and *37.1 percent* respectively as shown in Figure 4-2. Gaborone contributed *20.0 percent* of the informal sector businesses; followed by Kweneng East and Francistown with *15.4* and *10.9 percent* respectively; see Table 4.3.

Figure 4-2: Informal Sector Businesses by Region

4.1.3 Informal Business Source of Capital

The majority (*80.8 percent*) of the businesses were financed from operators own cash savings; followed by Loans from friends & relatives with *3.9 percent* (See Table 4.2). Agriculture seems to feature as source of capital for some informal businesses as this accounted for *1.7 percent*, Commercial Banks and SHHA accounted for *1.3 percent* each while CEDA loans accounted for *0.4 percent* in the main activity.

4.1.4 Difficulties Affecting Operation of Informal Business

Difficulties affecting informal businesses in their operations are shown in Table 4.5. “Non-payment of Goods & Services Supplied on Credit” was cited as the major problem (*38.1 percent*). This was followed by “High Competition” with *20.3 percent* and “Lack of Capital/Equipment” accounted for *15.6 percent*. In 1999, the major difficulties facing small businesses were “Unavailability of Credit Facilities” (*26.3 percent*); non-Payments of Goods & Services Supplied on Credit” (*19.3 percent*) and “Lack of Space” (*14.3 percent*).

4.1.5 Location of Raw Material

As shown in Table 4.6, most of the informal sector businesses (*52.8 percent*) obtain their raw materials from “Local Areas in the same district”. About *29.6 percent* of businesses reported that they do not need “Raw materials/supplies” and *12.7 percent* source their materials from “Other District”.

4.1.6 Form of Assistance Needed

The most useful assistance required by the informal sector businesses was to have “Better Access to Loans”, which recorded *56.5 percent*; followed by the “provision of a permanent site” with *23.5 percent* and “assistance with marketing” with *6.7 percent*; See Table 4.7.

4.1.7 Type of Training Required

“Book keeping/financial/accounting” was reported by *34.3 percent* of informal businesses as the major type of training required; followed by “Managerial” skills at *27.3 percent*. A significant number (*16.3 percent*) of informal enterprises reported that they need “Technical skills” through formal training, Table 4.8.

4.2 Informal Sector Business Operator’s Characteristics

Table 4-1 shows that the majority of the informal sector businesses are operated by head of households; accounting for *67.0 percent*. Almost all informal businesses are operated by citizens; *96.1 percent*. Most (*87.6 percent*) of persons operating informal businesses had attended formal education. Informal business operators with no training accounted for *74.1 percent*. The results show that there is a positive correlation between informal business operators and those with no training.

“Never married” persons are more likely to operate an informal business than “Married” people. This is explained by *39.6 percent* of businesses operated by the “Never married” as compared to *33.8 percent* by “Married” persons, Table 4.16.

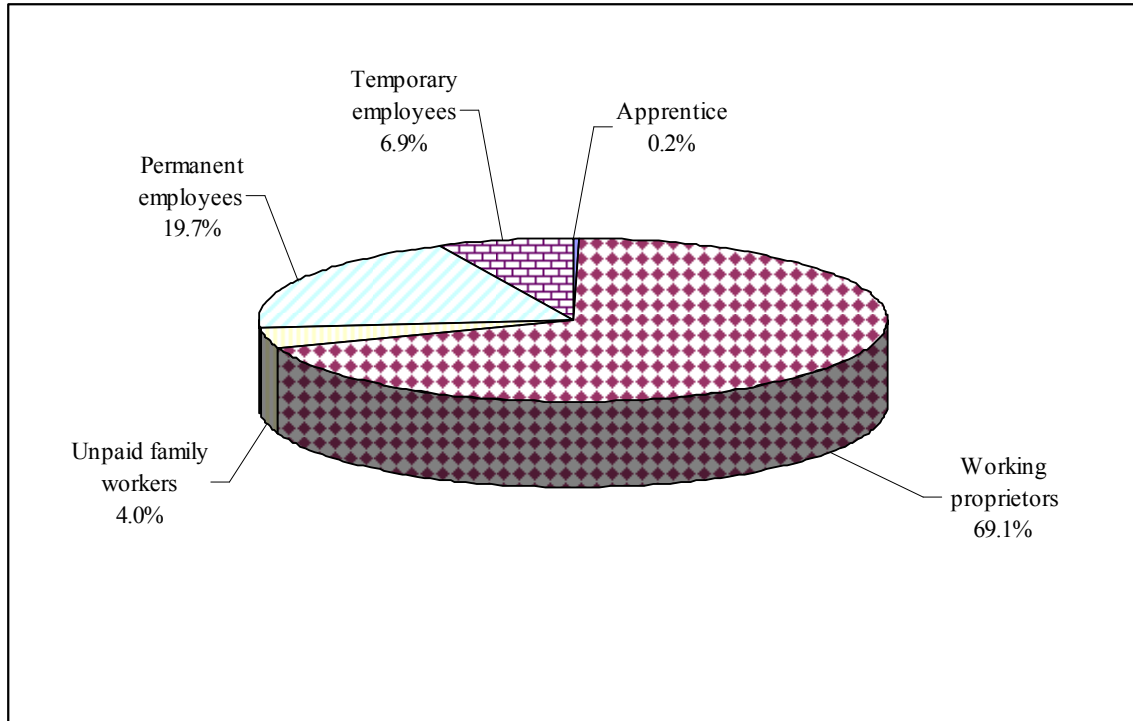

As shown in Table 4.19, *17.6 percent* of informal business operators had certificate and out of this, *45.3 percent* had either a vocational or brigade certificate. Degree holders constituted *2.8 percent* of the business operators.

Table 4.18 shows that *67.8 percent* of informal sector operators had no employees and *15.7 percent* were working for someone else. Among operators with no employees, females accounted for *74.0 percent*. Most of those working for someone else were employed in the Public Administration as elementary workers (*28.7 percent*); see Table 4.21.

4.3 Informal Sector Employment

Informal sector operators were requested to provide information on the number of persons that were employed in their businesses as at last month. The results show that there were 60,386 persons employed in the informal sector, of which *60.7 percent* were females. This had almost trebled as compared to the 1999 figure of 22,499. The majority of employees was “Working Proprietors” (*69.1 percent*); followed by “Paid Permanent” and “Temporary employees” with *19.7* and *6.9 percent* respectively as depicted in Figure 4-3.

Figure 4-3: Employees in Informal businesses as at end of last month

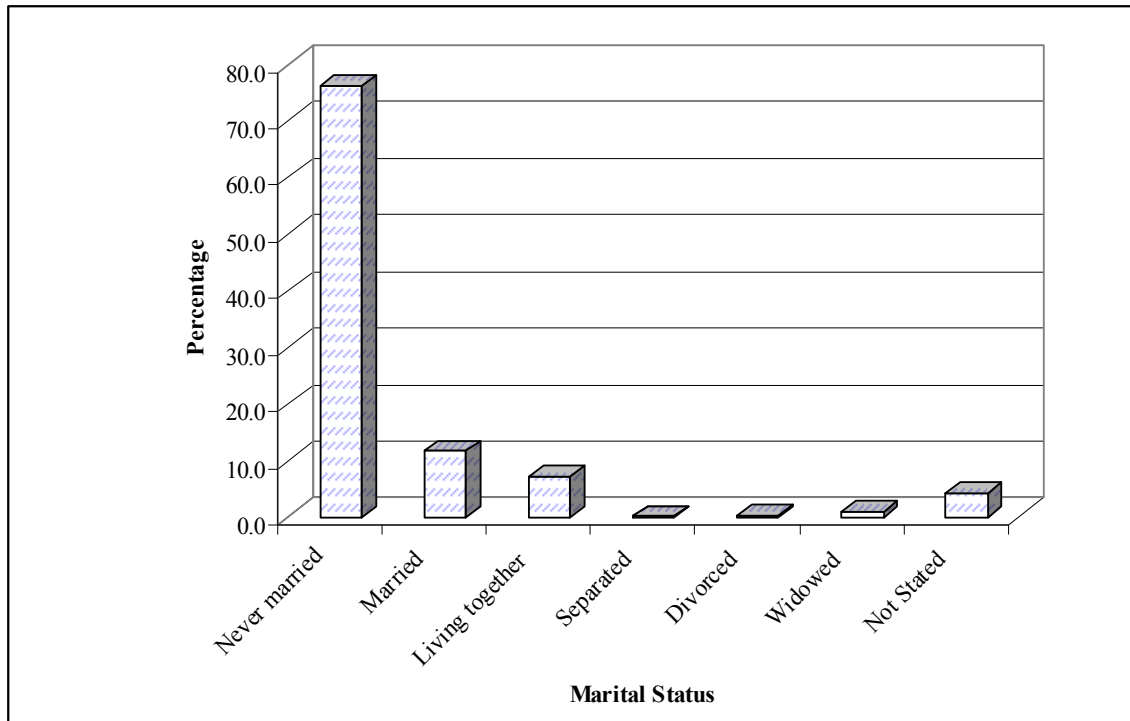

Most of the persons in the informal sector employment, 55,044 (91.2 percent) were full time employees. Wholesale & Retail Trade recorded the highest number of employees with 37.3 percent; followed by Real Estate and Manufacturing with 17.2 and 11.5 percent respectively. Among the full time citizen Wholesale & Retail Trade workers, 70.9 percent were females; Table 4.23.

Table 4.27 shows persons currently working as employees in the informal sector excluding the owner of the business. Of the 16,980 reported as currently working as employees, 51.4 percent were males. The majority (66.8 percent) of the employees were aged 20-34 years old.

Figure 4-4 shows that most of the employees (76.1 percent) reported as “Never Married”; followed by “Married” persons with 11.6 percent and “Living Together” with 7.0 percent. Among the “Married” employees, 59.7 percent were males.

Figure 4-4: Percentage Informal Sector Employees by Marital Status

Distribution of employees by school attendance shows that *87.5 percent* had “Left School” while *6.8 percent* had never attended, Table 4.29.

Those employees who completed junior secondary education constituted *48.3 percent* of the total employees; followed by senior secondary and primary education with *28.0* and *20.7 percent* respectively; see Table 4.30.
