PREFACE

This report follows our strategic resolve to disaggregate 2011 Population and Housing Census report, but also many of our statistical outputs, to cater for specific data-needs of users. Therefore, data and commentary contained herein, is one of a series of district profiles presenting disaggregated data to the level of village, abstracted from the 2011 Population and Housing Census results. For definitive interpretation, villages covered in this report are of 500 or more inhabitants. The analysis aims at providing ready information to facilitate planning and policy making. It presents information on composition, distribution and gender.

In addition, the report presents information on marital status, orphan-hood, religion, access to water and sanitation and sources of energy among others. It is our sincere hope that information and analysis contained herein, is found to be very useful, but also ignites reciprocal engagements with data users to offer feedback on how forthcoming reports can be improved.

Anna N. Majelantle
Statistician General

TABLE I.2: SUMMARY OF KEY INDICATOR FOR FOR CENTRAL MAHALAPYE 2011

INDICATOR		VALUE
Total Population	Total	118,875
	Male	57,547
	Female	61,328
Population change 2001 - 2011		8.3
Population growth rate 2001 - 2011		0.8
Sex Ratio		93.8
Population urban		53.5
Population density		7.2
Crude Birth Rate		28.1
Crude death rate		9.5
Natural Rate of Increase (% per annum)		0.68
General Fertility Rate (per 1000 women 15 – 49)		118.0
Mean age at childbearing		29.3
Infant mortality rate		21
Child mortality rate		12
Under five mortality rate		32
Life expectancy at birth (years)	Males	60.0
	Females	65.0
	Total	
Mean ages (years)	Males	24.8
	Females	27.6
	Total	
Median ages (years)	Males	19.0
	Females	23.0
	Total	
Population groups		
Infants (0- 1)		5.7
Under-fives (0 -4)		13.3
School going (6 – 13)		16.8
Labour force (15 – 64)		55.6
Youth (18 – 35)		43.9
Elderly (65+)		6.6
Dependency ratio		82.5
Proportion with access to improved sanitation		81.6
Proportion with access to improved source of water		96.5
Proportion with seeing defects in one or both eyes		1.7
Proportion with hearing defects in both ears		0.8
Defects of speech		0.4
Inability to use both legs		0.6
Inability to use one or both arms		0.3
Inability to speak		0.1
Moderate to severe mental retardation		0.3
Unemployment rate	Males	14.6
	Females	13.3
	Total	13.9
Literacy rate	Males	74.6
	Females	76.7
	Total	75.7
Proportion of population 12 years and over who are married		16.1
Proportion 12 years and over who are cohabiting		21.2
Proportion of population 17 years and less with mother deceased		6.4
Proportion of population 17 years and less with father deceased		12.7
Proportion of population 17 years and less with both parents deceased		2.6

1.0 Background and Commentary

The Population and Housing Census (PHC) is the most representative form of enumeration since it covers as many people and topics as possible. It is the total enumeration of households and throughout the country. The census is carried out after every ten years in Botswana. This report covers indicators and counts of the 2011 census and makes comparisons, in some instances, with the previous census of 2001. There are two types of enumeration methods. One is de jure type and the other is de facto. De jure method refers to enumeration of population according to usual residence and excludes visitors but includes absent residents. De facto method, on the other hand, refers to enumeration of population according to where one spent the census night and it includes visitors but excludes absent resident.

The 2011 PHC used defacto enumeration. An important aspect about the 2011 census is its wide disaggregation of information by important variables of sex, gender, locality among others. The disaggregation formed the basis of this report. The report presents information on localities with 500 or more inhabitants.

1.1 Background to the Report

This report was necessitated by the need for disaggregated data at all levels. Statistics Botswana with assistance of the United Nations Population Fund (UNFPA) undertook work on producing a geographically disaggregated and gender sensitive information.

1.2 Importance of the report

Demographic and socio-demographic information is critical in the development efforts of a country. The tendency has been to produce national averages to represent the situation of all people within the countries. Hence, data on the district and locality level have not been fully published and used by the localities even when available. This masked the wide disparities in demographic, health and other socio-economic indicators within the country. The outlook of these have, therefore, been overlooked hence conditions of large sections of the communities have remained largely unknown.

2.0 Total Population and growth

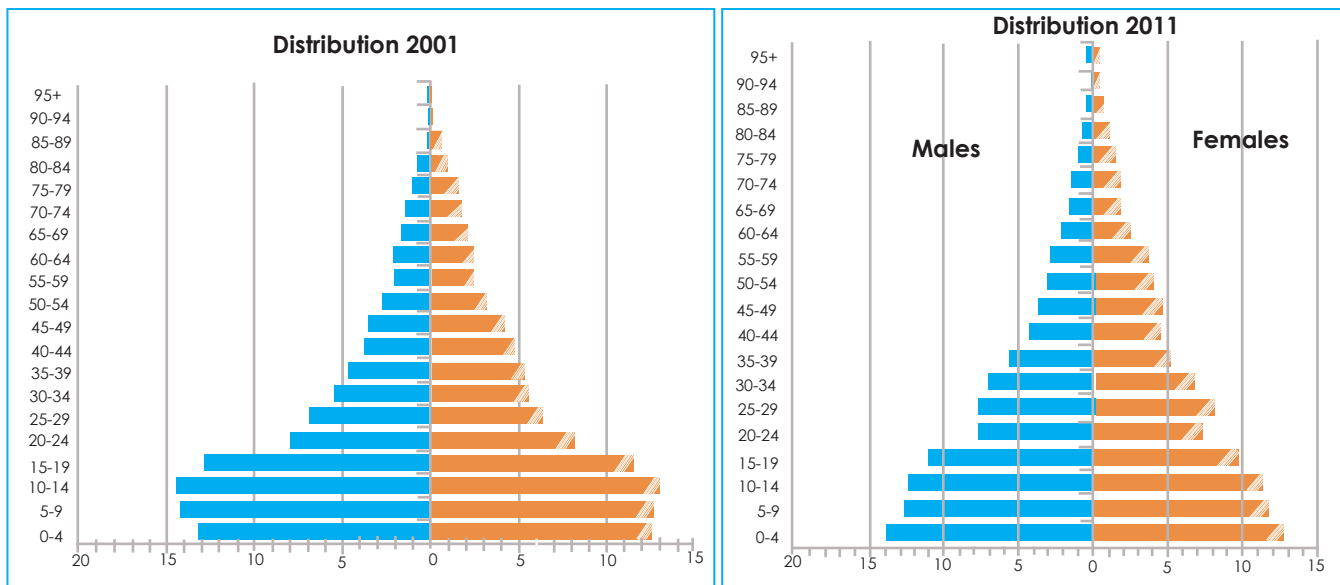

The 2011 Population and Housing Census estimated the total sub district population at 118,875. This was an increase of 6.6 percent from the 2001 count of 109,811. The increase represented an annual increment of 0.8 percent. That is, between 2001 and 2011, the sub district population was growing by 0.8 percent every year. The district is headquartered in the village of Mahalapye, which contributes 39 percent of the total sub district population. The village grew by an estimated 6.6 percent between 2001 and 2011.

The highest growth was recorded in the villages of Moralane at 88.7 percent, Mokgenene at 61.0 percent and Otse at 55.6 percent. Other villages which recorded significant growth over the period were Mokoswane at 53.6 percent and Mmutlana at 42.9 percent. On the other hand some villages lost population between 2001 and 2011. These included Tumasera, which lost 29.4 percent of its population. This was mainly due to designation of Seleka as a village, which was part of Tumasera in 2001. Other villages which recorded net loss of population were Kalamare at minus 8.2 percent, Moshopha which lost 7.7 percent of its 2001 population. While the reasons for the net loss cannot be ascertained, the villages outlined above do not have significant economic activities and job opportunities, thereby experiencing a net outmigration of population mainly of job opportunities elsewhere. The population is, therefore, susceptible to migration to areas with better job opportunities.

3.0 Population Composition

Just like the rest of the country, the sub district has a youthful population. Infants aged a year and below made up 5.7 percent of the sub district population, while those aged under five years made 13.3 percent.

Figure 2: Mahalapye District Population Age – Sex 2011 Distribution

The distributions in the above pictures show a broad base denoting a high proportion of infants and children up to the age of 19. These are children and youths of school going age up to senior secondary level. After the age of 19, there is a marked reduction of youth in the ages 20 years and above. These are probably youths in tertiary education which may not be provided in the sub district. In addition, some have moved to other centres in search of jobs and better opportunities for self-improvement.

3.1 Labour Force

Labour force is defined as the population aged 15 to 64 years regardless of whether they are currently engaged in any economic activity or not. This population constituted 55.9 percent of the sub district population. Mahalapye village had the highest percent of persons in this aged bracket at 61.1 percent followed by Shoshong at 59.8 percent. The villages of Chadibe and Matlhako had the lowest percent of people within the labour force bracket at 43.5 and 43.4 percent respectively.

3.2 The youth

The youth are described as those aged between 18 and 35 years. This group made up 27.2 percent of the sub district population. Dibete Station had the highest proportion of youths at 32.4 percent, followed by Mahalapye at 31.7 percent. Other villages with significant proportion of youths included, Shakwe at 29.2 and Kodibelong at 27.4 percent.

3.3 The elderly

The elderly population refers to those who are aged 65 years and above. The group is assumed to be economically inactive, thereby, also classified as a dependent group. The high proportion in this age presents the country with a huge dependency burden as this group has special needs including need for special care and provision of pensions among others.

Overall, 6.6 percent of the sub district population were the elderly. This proportion is higher than the national average of 5.5 percent. The village of Pilikwe had the highest proportion of elderly population at 10.5 percent. The village was closely followed by Makwate at 9.2 percent, Moshopha and Kalamare at 9.1 percent each. Mahalapye had the lowest percent of elderly population at 5.3 percent.

4.0 Access to Sanitation

Access to sanitation facilities was measured at household level by assessing whether it has access to flush toilet either in-house, communal or shared with a neighbour or had access to a sanitary pit latrine. Overall, 81.6 percent of the sub district households had access to sanitation facilities. While 16.9 percent of the sub district households

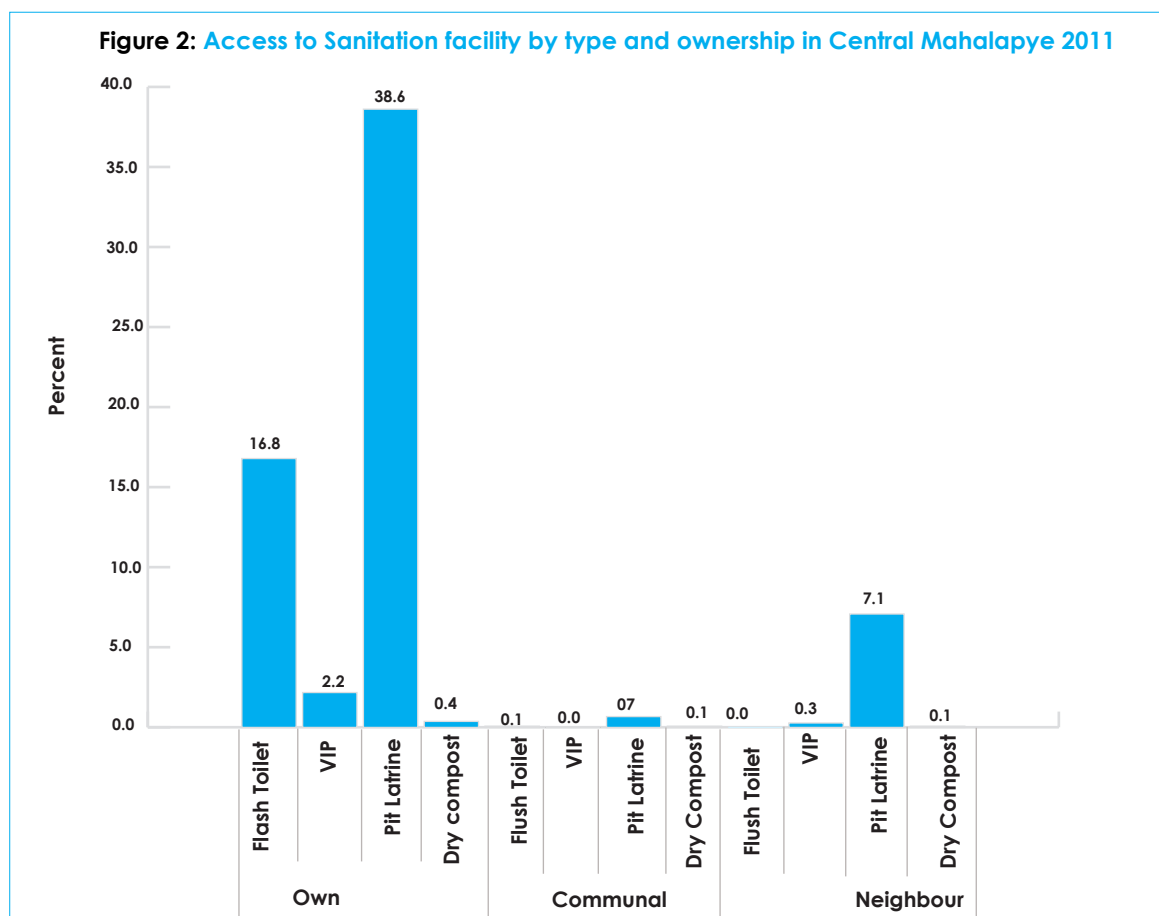

had access to flush toilets, additional, 45.8 percent had access to pit latrines out of which 38.6 percent used their own pit latrines, 7.1 percent from a neighbour and 0.1 used a communal pit latrine.

The village of Mahalapye had the highest proportion of households which used own flush toilets at 28.0 percent followed by Piliikwe with 19.4 percent. On the other hand, the use of pit latrine was still prevalent in most villages, including the urban village of Mahalapye where 38.6 percent used pit latrines. The highest percent of those who used pit latrines were found in the village of Matlhako at 71 percent of the households.

Regarding overall access to toilet facilities, which included pit latrines, Matlhako had the highest access at 98 percent while Moralane and Mokgenene had the least access at 25.0 and 33.3 percent respectively.

5.0 Access to portable water

Providing safe drinking water has been a priority for Government since the early years of independence. As a signatory of the Millennium Declaration, the Botswana is committed to ensuring that majority of its population have access to improved water source. Improved water source referred to piped water indoors, outdoors, neighbour's tap, communal tap, bowser or tanker and borehole.

Overall, 96.5 percent of the sub district households had access to water from one of the sources mentioned above. The lowest proportion of those who had access to improved water source was found in the settlement of Tewane with 79.5 percent of the house. Other villages in the sub district had more than 90 percent of the households with access to improved water sources.

6.0 Disability

Disability may be generally defined as a condition which may restrict a person's mental, sensory, or mobility functions to undertake or perform a task in the same way as a person who does not have a disability.

The population of the sub-district was assessed for its ability to see with one or two eyes, ability to hear with one or both ears, speaking, ability to use one or both legs, ability to use one or both arms and retardation. Though disability in the sub district was low, the common form of disability was defects of seeing in one or both eyes as it affected 1.7 percent of the district population. This form of disability was more prevalent in Mmutlana where it affected 5.4 percent of the village population. The second most common form of disability in the sub district was inability to hear with one or both ears and affected 0.8 percent of the district population.

Disabilities may have far-reaching consequences at household and societal levels. These include increased need for care by the family; social relationships may be disturbed and the family structure may disintegrate; economic burdens on families may lead to poverty; low socio-economic level and low education lead to less development and lower productivity in society and the demand for care by the society/state may be increased .

7.0 Employment and unemployment

Employment was estimated for persons aged 15 years and above. The overall labour force for the sub district was 29,200 or 24.6 percent of the sub district population. Overall unemployment for the sub district was estimated at 13.9 percent and showed a picture not familiar to other districts where females have less unemployment rate than their male counterparts; where the latter realized 14.6 percent against 13.3 percent for females.

8.0 Literacy

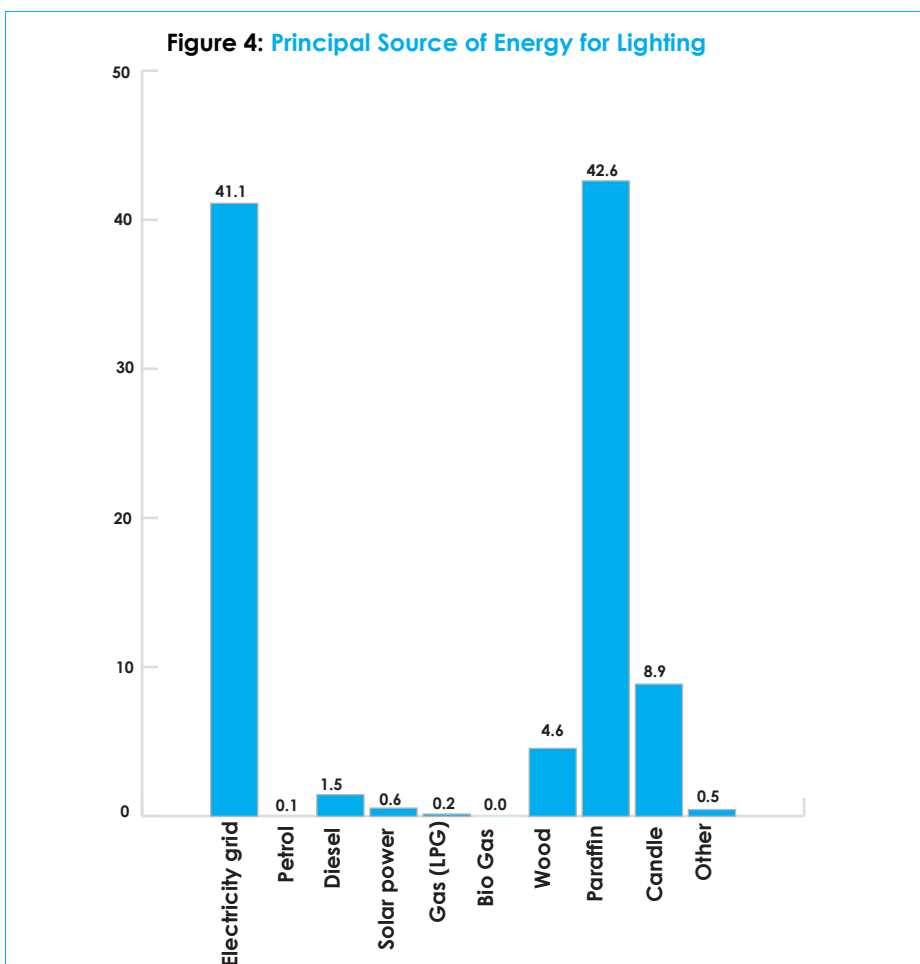

Literacy rate was estimated for population aged 10 years and above who had completed standard four or above. Those were assumed to be literate and used to estimate literacy rate. Overall, 81.6 percent of the sub district population was estimated to be literate. The highest literacy rate was estimated in Ngwapa at 88.0 percent followed by Mahalapye at 87.6 percent. Literacy rate was lowest in Kodibeleng and Moralane at 61.6 and 61.0 percent respectively.

9.0 Source of Fuel for lighting

Figure 1 shows that paraffin and electricity are the leading sources of energy for lighting for more than 80 percent of the sub district households. Paraffin was the leading source as it was used by 42.6 percent of the households followed by electricity with 41.1 percent.

The largest proportion of those who used electricity for lighting was found in Mahalapye at 63.2 percent followed by Machaneng, Sefhare and Pilikwe at 46.4, 45.2 and 44.9 percent respectively.

The commonest source of fuel for lighting in the sub district was paraffin, which was used by 42.6 percent of the households. The data shows that paraffin was used in villages where connection to the electricity grid was limited. A significant proportion (8.9%) of the district households used candle for lighting.

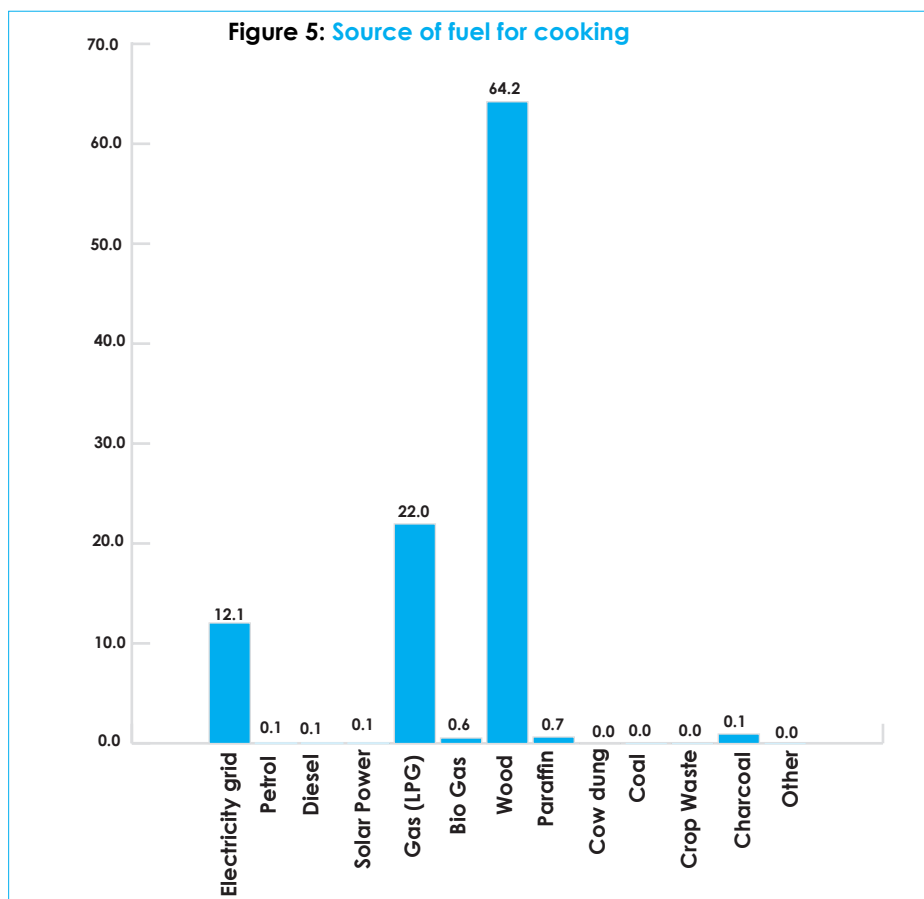

10.0 Source of Fuel for cooking

Cooking energy accounts for about 90 percent of all household energy consumption in the developing world countries. Worldwide, 2.5 billion people use biomass fuels for cooking. These include firewood, charcoal, dung and agricultural residues. Biomass fuels are often the only available energy source, especially in rural areas. In most Sub-Saharan countries, more than 80 percent of the population use biomass fuels for their daily cooking .

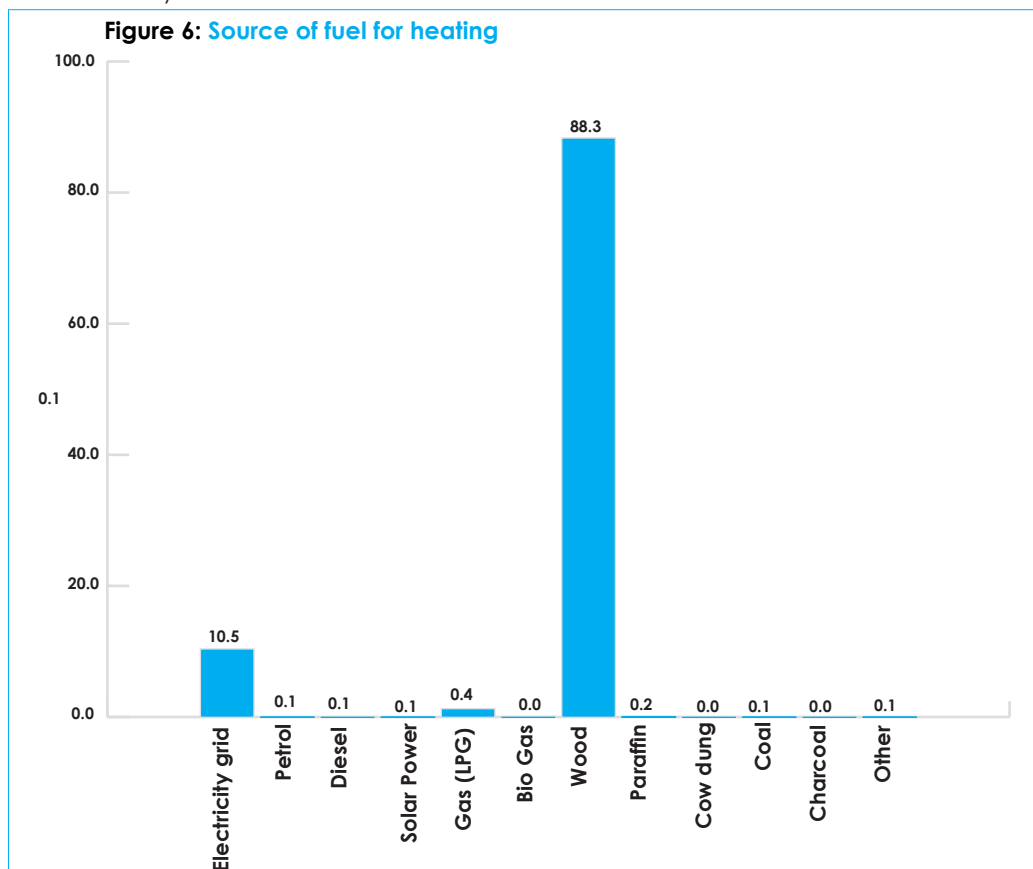

Figure 3 below shows that in Botswana, wood is, by far, the most used source of energy for household cooking. It was used 64.2 percent of households in the sub district. The use of wood was followed by that of biogas and electricity at 22.0 and 12.1 percent respectively. The use of firewood for cooking was highest in the rural villages where other alternatives are limited.

With a growing population, the demand for biomass fuels may far exceed sustainable supply which will lead to massive deforestation, land degradation and desertification. Additionally, the biomass fuels are mainly burnt in inefficient open fires which contribute to contamination of the atmosphere.

11.0 Source of Fuel for Heating

In a home the heating system normally serves two purposes. The primary purpose of heating is to maintain warm temperatures within the home during colder months. Keeping a house warm is important for the occupants of the home as well as the structure itself. The secondary purpose of a heating system is to heat domestic hot water for usage during all months of the year.

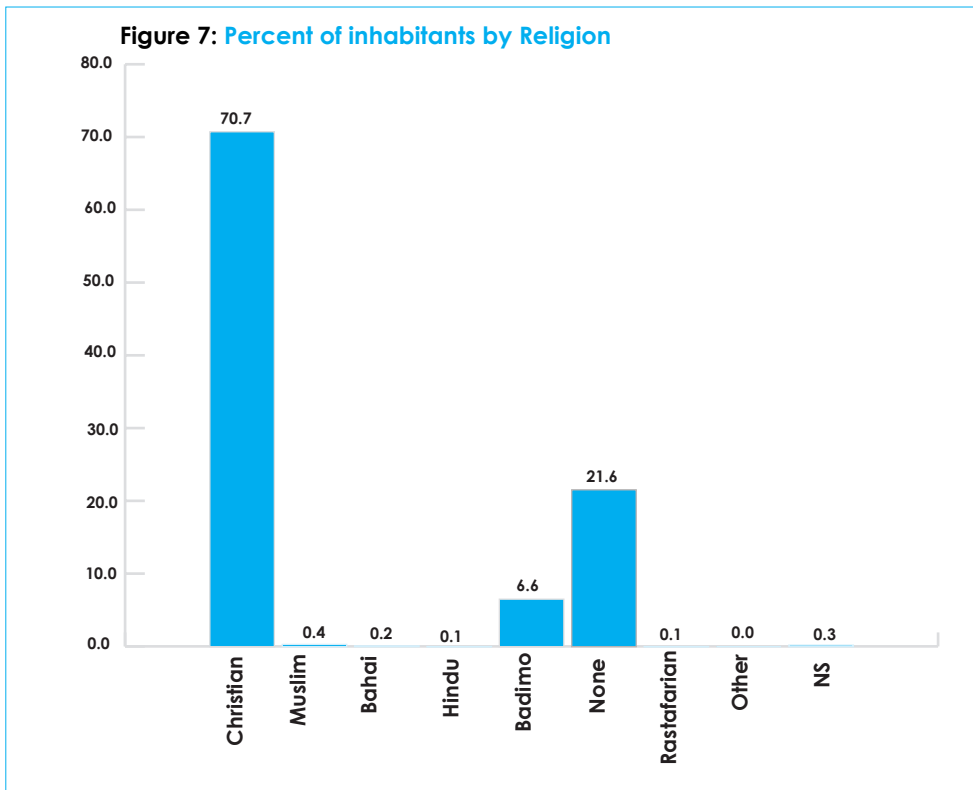

Just like cooking, wood is, by far the common fuel used for domestic or household heating. It was used by 88.3 percent of the sub district households. The proportion of those who used wood for heating was high for both rural and urban villages. For example, the urban village of Mahalapye, which had the lowest proportion of households using wood for heating still, had 78.2 percent of its households using firewood for heating.

The use of firewood was followed by those who used electricity at 10.5 percent. Mahalapye had the highest proportion of households using electricity for heating at 20.1 percent followed by Machaneng and Sefhare at 16.2 and 11.2 percent respectively.

12.0 Religion

A religion is defined as an organized collection of beliefs, cultural systems, and world views that relate humanity to an order of existence. Other scholars define religion as a collection of cultural systems, belief systems, and worldviews that establishes symbols that relate humanity to spirituality and, sometimes, to moral values .

Figure 7 shows that Christianity was the most followed religion with 70.7 percent of the sub district population reportedly following the denomination. A significant 21.6 percent of the sub district population reported not following any religion and a further 6.6 percent followed Badimo.

13.0 Marital Status

Marital status was asked for persons aged 12 years and above. That is, whether they were in any union at the time of the census. Though the country's legal age of marriage is 18 years, there are still cultures where young girls are married at ages below that, some as young as 12. One purpose of marriage is to create a stable home in which children can grow and thrive.

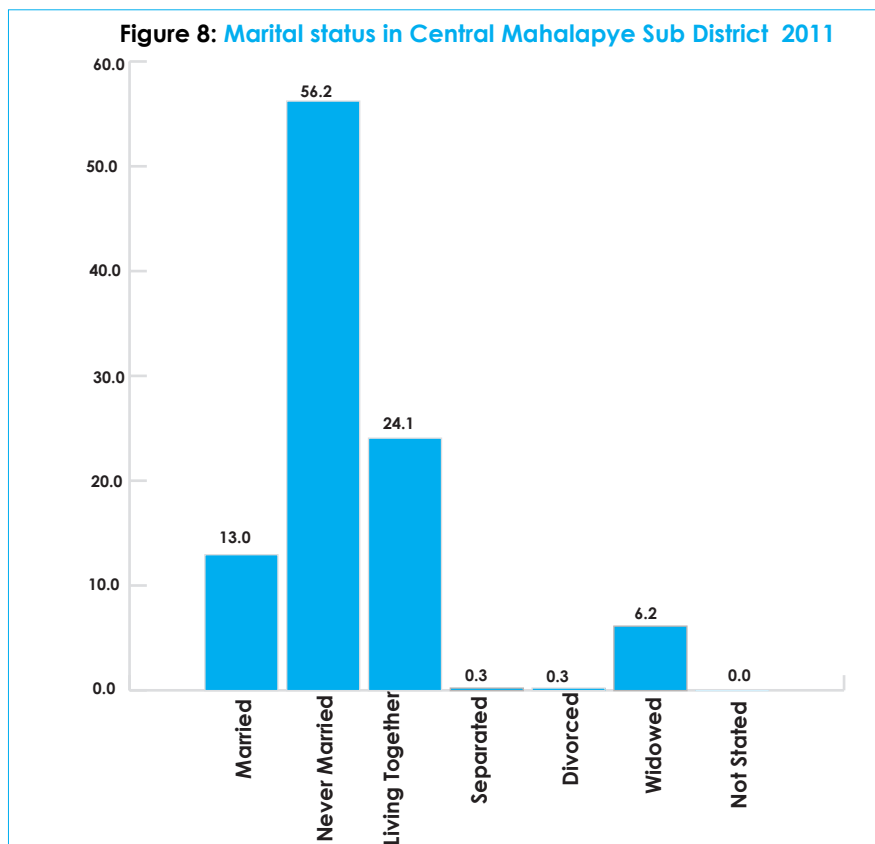

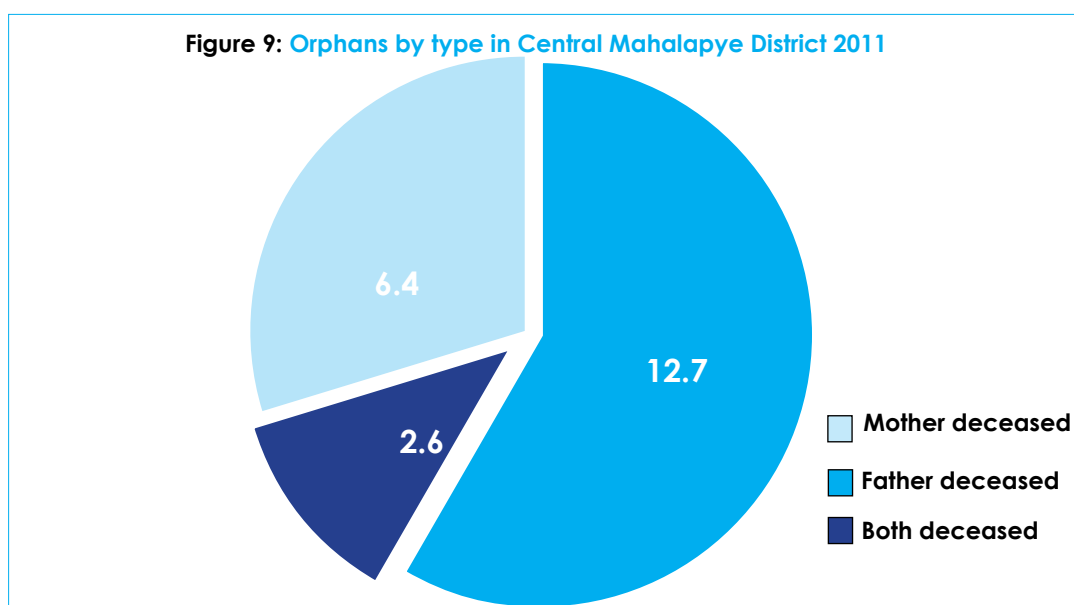

Figure 6 shows that only 13.0 percent of the population of the sub district aged 12 years and above were reportedly married. More than half (56.2 percent) of the group aged 12 years and above was reported to have never been married. The second highest group was those who were living together or cohabiting at 24.1 percent. There is a worrying trend of increasing rate of cohabitation against the declining percent of married population. This raises the need to continual efforts to promote marriage as an institution for procreation, child bearing and rearing.

14.0 Orphan-hood

The United Nations Children's Fund (UNICEF) and global partners define an orphan as a child who has lost one or both parents. Evidence clearly shows that the vast majority of orphans are living with a surviving parent, grandparent, or other family member. A further 95 percent of all orphans are over the age of five.

This definition contrasts with concepts of orphan in many industrialized countries, where a child must have lost both parents to qualify as an orphan. UNICEF and numerous international organizations adopted the broader definition of orphan in the mid-1990s as the AIDS pandemic began leading to the death of millions of parents worldwide, leaving an ever increasing number of children growing up without one or more parents. So the terminology of a 'single orphan' – the loss of one parent – and a 'double orphan' – the loss of both parents – was born to convey this growing crisis³.

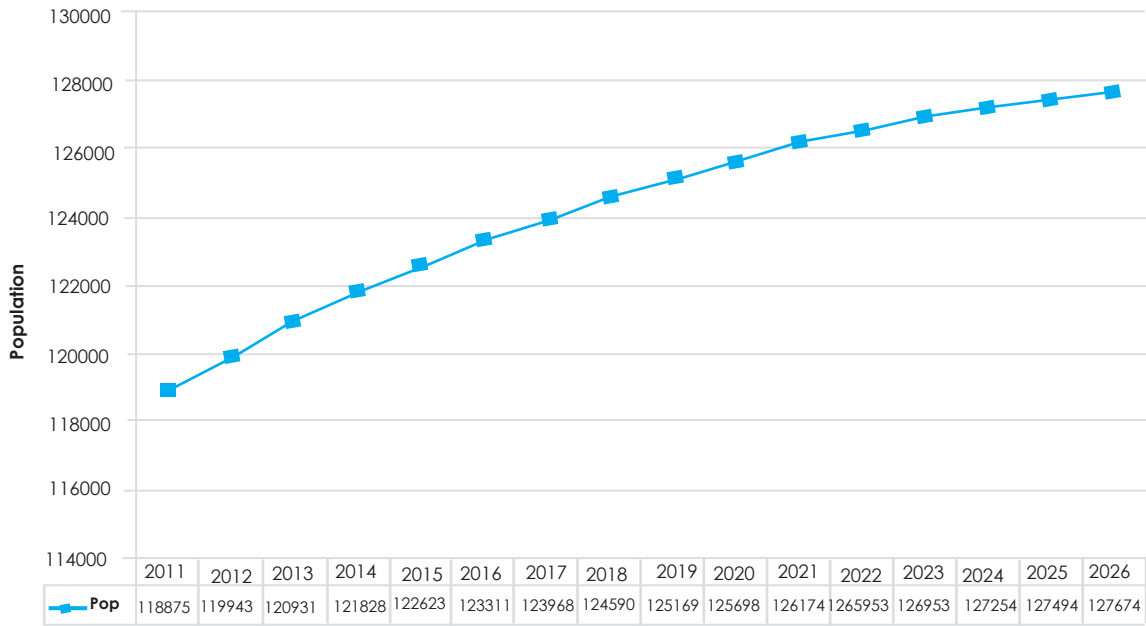

Botswana defines an orphan as a child aged below 18 who has lost one or both parents. Figure 9 shows that more than half (58 percent) of the orphans had lost a father but with the mother surviving. Only 12 percent had of the orphans lost both parents.

15.0 Projected Population 2011 – 2026

The population of the sub district was estimated to have grown by 8.3 percent between 2001 and 2011, thereby growing at 0.8 annually during the period. It is estimated that by 2026, the population of the sub district will reach 127674, which will be an addition of 8,799 inhabitants or a 7.4 percent increase from the 2011 figure of 118875.

The sub district is not attracting a lot immigrant to trigger a rapid growth. However, evidence elsewhere shows that the sub district's headquarters of Mahalapye has gained significance in its contribution to the country's economy and employment mainly in the construction and retail sectors. Such growth is likely to promote sustained growth of the sub district population for the foreseeable future.

Figure 12: Projected Population of Central Mahalapye 2011 - 2026

ANNEXES

Table 1: Population Growth by Village in Central Mahalapye District 2001 and 2011

Village	2001			2011			Total
