P R E F A C E

This is the thirty-first report presenting 2009 Health Statistics in Botswana.

Quality Statistical information is a prerequisite for evidence based and developmental programmes at different levels. The information in this report is about all activities for policy formulation monitoring and evaluation purposes.

All information in this report is based on routine data extracted from statistical returns compiled by health workers and medical records personnel from health facilities throughout the country. Data on non-institutional births and deaths have been included.

The report comprises five sections:

Section I: Health Facilities

Section II: Health Personnel

Section III: Out-patient Statistics

Section IV: In-patient Statistics

Section V: Mental Health Statistics

Statistics Botswana greatly appreciates the Ministry of Health and of Local Government for the continuous support and the effort put in by the health workers and all other stakeholders involved in this process.

I am grateful to the staff of the Department of Policy, Planning, Monitoring and Evaluation at the Ministry of Health (Health Statistics Unit) for working tirelessly and their dedication in the collection and compilation of this health report, ensuring its accuracy and reliability.

A N Majelantle
Statistician General

Introduction

This report analyzes national health statistics for 2009. The data are derived from service and administrative reports provided by public health facilities in Botswana.

The service data consists of outpatient and inpatient attendances. The outpatient data has been aggregated with the exception of eye-out and psychiatric out-patient whilst inpatient data is patient based. A patient who presents two diagnoses/conditions in one visit is recorded as two cases. In the revised tool (MH1049/Rev2003), consultation is recorded either as new or repeat case. New consultation refers to a case where a patient is seeking health service for a condition for the first time, whereas repeat, refers to cases where a patient is getting services for the same condition for the second and subsequent time.

Reported data are used to calculate the level of outpatient and inpatient morbidity and mortality, and to examine trends over time. The report also shows staffing patterns, access to health services, and non-institutional vital events nationally and by district. The non-institutional information is based on reported live births and deaths that occur outside the formal health system such as in homes. This report does not include information from private health practitioners.

Notifiable disease surveillance is published in the report for the Epidemiology and Disease Control Unit (Public Health) in the Ministry of Health to monitor and control the outbreak and spread of contagious diseases. Notifiable diseases are reported on a weekly and monthly basis by the same unit.

Objectives of the report

The report provides health statistics for Botswana in 2009. It includes a broad range of selected indicators, viz: health facilities, health personnel, outpatient and inpatient attendances, morbidity, mortality and obstetrics. Additionally, to provide a trend perspective, 2009 data is compared with the period 2002-2008.

Method of Data Collection and Processing

There were 29 Health administrative Districts in Botswana in 2009. These Health Districts coincide with census and administration boundaries. Each facility was assigned a unique 5-digit identification number. The first two digits designate the district. The third digit designates the type of facility; that is hospital, primary hospital, and clinic or health post. The last two digits represent a specific facility within a district. These codes were used in data processing.

Personnel data were collected in the last month (December) of the reporting year. Personnel printouts for the preceding year were sent to each unit in the Ministry of Health (including DHTs). The units then updated the printouts for the current year. Upon receipt of the latest staffing information, the HSU database was updated. Hence, the data does not show the staffing situation for the earlier months of the reporting year.

The outpatient and inpatient data sets received from the reporting units were checked for among other considerations, completeness and relevance. Reporting facilities were also monitored to ensure they reported in a timely manner, and if not, the necessary follow-up was undertaken.

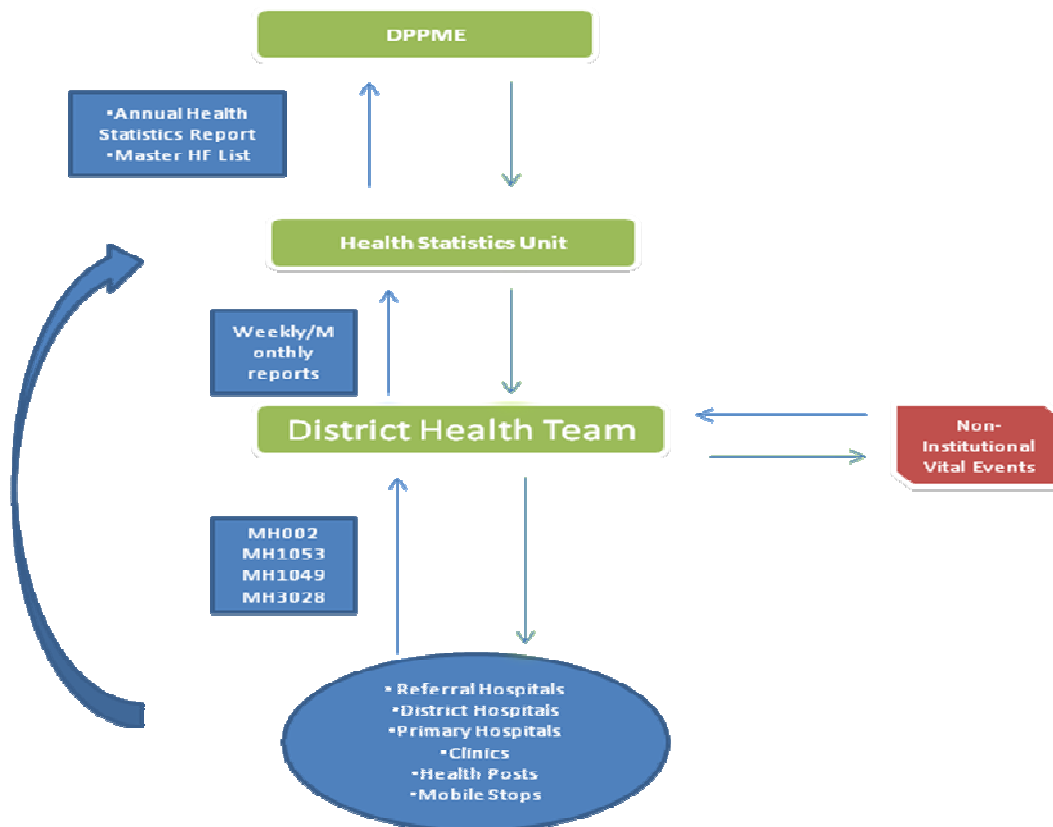

Since 2004, the revised data collection tools were implemented along with consideration of International Classification of Diseases 10th edition (ICD-10) codes. Hence, the data were coded according to the ICD-10th Edition (see appendix 2) and then captured and analyzed.

The Health Statistics Unit uses Cs-Pro (Census & Survey Processing System) package for data capturing. Tabulation is done in Statistical package for Social Sciences (SPSS).

Data Flow

As depicted in the schematic below, most data for the Annual Health Statistics Report originate in the health facilities, and reach the HSU through the District Health Team. There are a few notable exceptions when the HSU accesses the data directly from the health facilities. For instance, the Health Statistic Unit retrieves service data for Princess Marina, Nyangabgwe, Sekgoma Memorial and Maun hospitals through the Integrated Patient Management System (IPMS). In each health district, the Family Welfare Educators collect data on non-institutional births and deaths and transfer it to the DHTs which, in turn, register it with the HSU.

Data Flow Schematic Diagram

Quality of Data

This Annual Health Statistics Report reflects both successes and challenges related to the collection of health data in Botswana.

Achievements

- Botswana is amongst few countries in Africa which started using the ICD-10th edition, as of 2004.
- A good number of officers were trained in ICD-10th edition throughout the country so that initial coding could be done at the health facility level.
- Data from all public health facilities are included in this report.

Challenges

- The report does not examine data from private health facilities. As a result, the service data, especially in urban areas, cannot be taken as a comprehensive reflection of the overall service situation.
- Although all health facilities reports regularly using the standardized reporting instruments, there is still room for improvement. For instance, on processing data, the HSU staff often encounters missing values, poor legibility of records, and lack of internal consistency.
- Some health institutions consistently fail to provide up-to-date data on their staffing, resulting in underreporting of personnel data.
- Some of the health estimates maybe biased, especially in relation to the reporting of infant birth weight. First, the data on numerical birth weight exhibit considerable heaping on digits ending in 0 and multiples of 5. The heaping indicates that birth weight is rounded by medical personnel when they record it. For example, heaping at 3,100 grams and 2,500 grams was preferred. Exactly 3.9 per cent and 2.8 per cent of the infants were reported to have weighed 3,100 grams and 2,500g at birth, respectively. Misclassification of birth weights, especially at

2,500 grams, may possibly bias the prevalence of low birth weight downwards. Second, birth weight is not recorded for 0.7 per cent of infants. It is not clear whether these infants were never weighed, or data was simply never availed at the time of birth, it could also be that they were delivered at a different health facility.

- There has been a significant delay in the generation of this report due to multitude of factors. Nevertheless, the statistics were current at the time of collection and the report can still serve as a guide to the disease epidemiology and health service needs.

Despite the above limitations, statistics in this report highlight trends in key morbidity and mortality indicators in Botswana. Secondly, the statistics were confirmed by staff of the Health Statistics Unit in the Ministry of Health for completeness, and accuracy. Thirdly, Health Information Officers at the health facilities were trained on ICD-10th editions so that initial coding could be done at the level of the facilities. This arrangement provided coding quality assurance, and minimized the time spent on central-level coding. Moreover, the Health Information Officers at the facilities are well placed to quickly act on missing data by approaching the relevant healthcare provider.

RESULTS

1.0 HEALTH PERSONNEL

Overall, from 2008 to 2009 the number of health personnel has increased across all categories with the exception of 'other professionals'. Across districts, the number of professional doctors increased from 716 in 2008 to 819 in 2009; an increase of 14.4 per cent. This increase is a continuation of a trend in which the number increased from 591 in 2006 to 716 in 2008.

The number of professional nurses increased from 5,616 to 5,816 between 2008 and 2009. The 2009 figure represents a 3.6 per cent increase in the number of professional nurses, compared to 2008. The number of professional nurses had decreased by 2.6 per cent during the 2007/2008 period, from 5,765 in 2007 to 5,616 in 2008.

The number of finance and administration personnel in health facilities has been growing consistently between 2003 and 2007, with the latter year in particular recording a significant 32.7 per cent increase in the number of personnel. However, this category encompassed a large number of personnel with variable qualifications and occupations. It is debatable whether all personnel classified as such belong to this category. Figures from the 2008 analysis show that this category has shrunk. The shrinking of the finance and administration category was not a result of staff attrition, but rather because of the creation of a new category named 'industrial'. The creation of this new category was necessitated by the fact that the finance and administration category was found to be too large and too varied, and contained within it, a significant number of industrial occupations. Thus the industrial category includes many personnel who were hitherto classified under finance and administration, shrinking the latter category. The 2008 data show that finance and administration had only 969 personnel while the industrial category expanded to 5,411. In 2009 there were 1,164 finance and administration personnel and 6,383 industrial personnel (**see Figure 1.1**).

The 'other professionals' category also experienced a significant decline of 16.8 per cent: from 2,286 in 2008 to 1,901 in 2009. Again, the decline in the number of personnel in this category in 2008 is a result of the creation of the industrial category, which absorbed a significant number from the other personnel classification. The main characteristic of the newly created industrial category is that it represents low paying manual jobs, some of which are transient.

Figure 1.1 Trends in health personnel by category 2003-2009

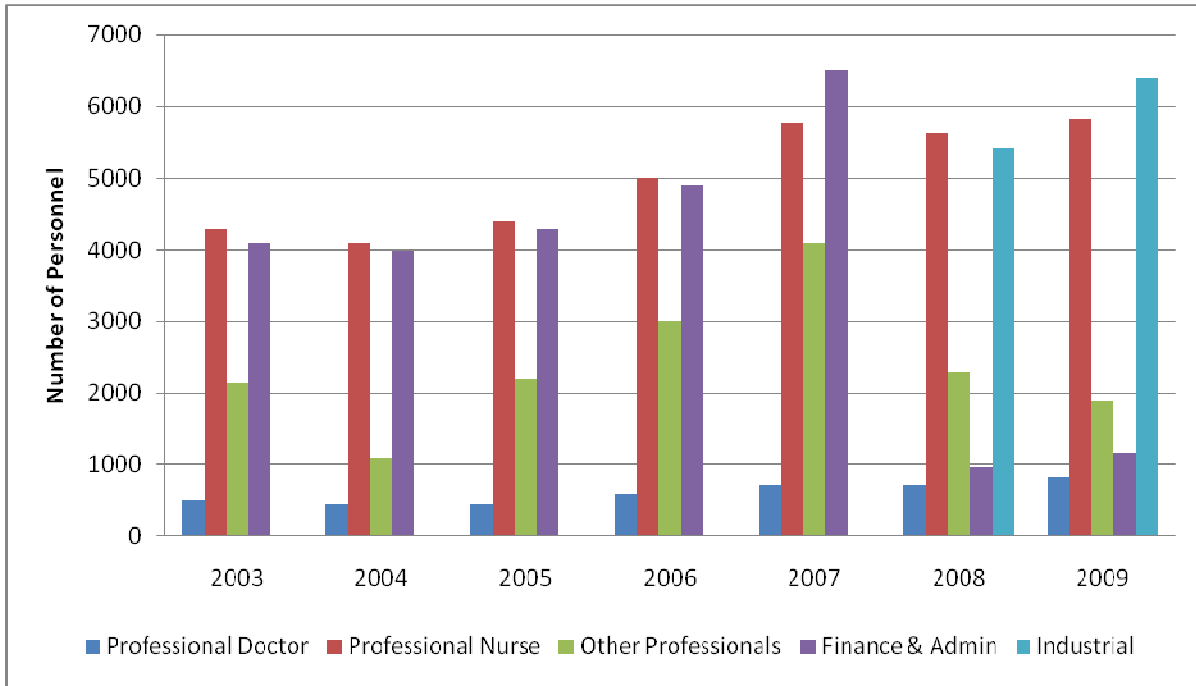

Figure 1.2 shows the percentage distribution of health personnel by location. In 2009, Hospitals, Primary Hospitals and District Health Management Team (DHMT) accounted for 40.1, 14.3 and 35.5 per cent of all health personnel, respectively. These proportions are consistent with those registered for the same categories in 2008. The Ministry of Health and the Institute of Health Sciences registered the lowest proportions of health personnel.

Figure 1.2 Percentages of Health Personnel by Location Type - 2009

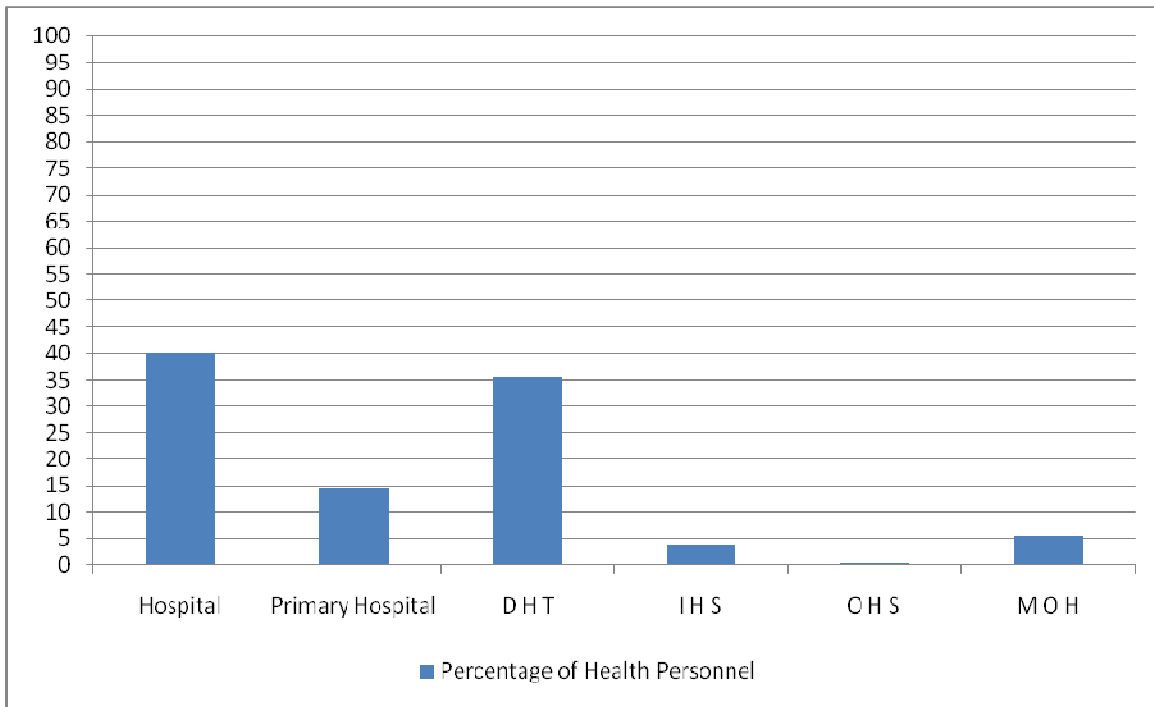

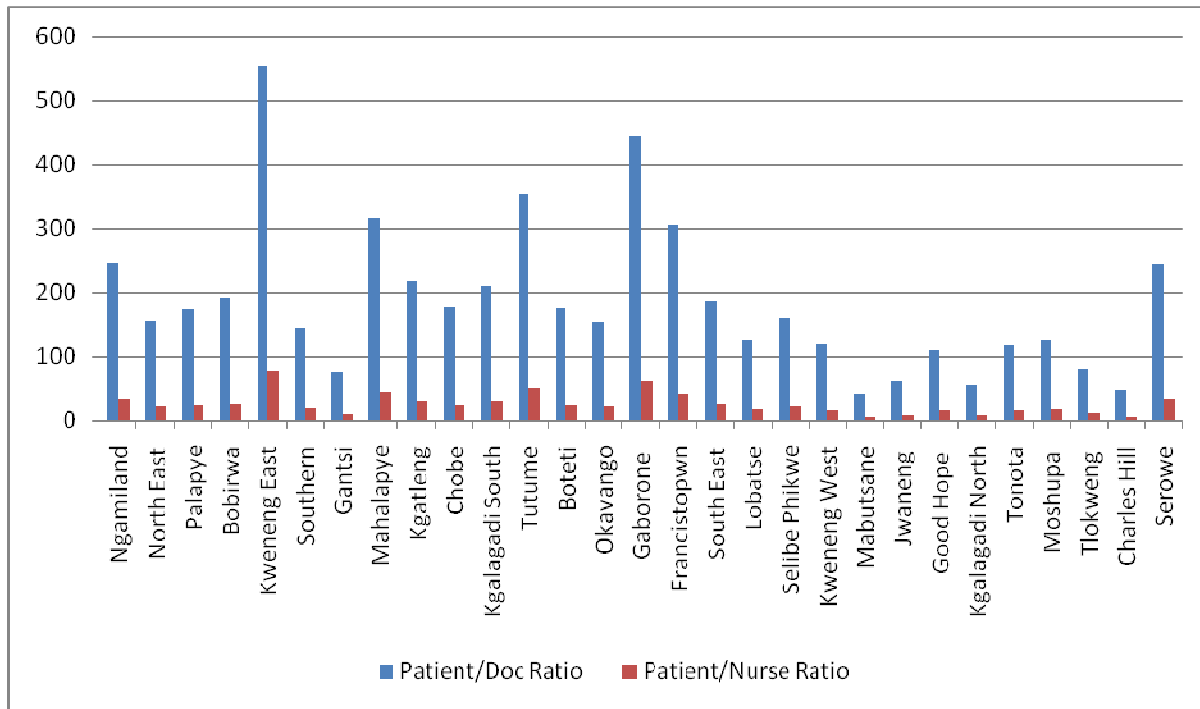

Figure 1.3 shows the ratio of outpatient attendees to doctors and nurses. This ratio is obtained by dividing the number of outpatient attendees during the year, by the number of doctors and nurses, respectively. This gives the number of patients per doctor or nurse.

Across all districts there is a relatively higher scarcity of doctors than nurses. In 2009 there were 819 professional doctors compared to 5,816 nurses. Consequently, the patient/doctor ratios are significantly higher compared to the patient/nurse ratios. **Figure 1.3** shows the patient/doctor and patient/nurse ratios by Health District. While most health districts have patient/doctor ratios in the order of 500 patients per doctor or below, eight (8) health districts have significantly higher patient/doctor ratios, some of which are three to four times those prevailing in other districts. For example, Kweneng East and Gaborone have doctor/patient ratios in excess of 500 and 400 patients per doctor respectively, while Tutume, Mahalapye and Francistown have doctor/patient ratios in excess of 300 patients per doctor.

Figure 1.3 Ratio of health personnel per outpatient attendance by health district 2009

Districts with underreporting: Gaborone, Francistown and Orapa/Boteti

Important to note that, two referral hospitals, Princess Marina in Gaborone health district and Nyangabgwe in Francistown health district, did not submit outpatient attendances. Therefore the ratio of professionals to outpatient attendances is underestimated for these districts.

1.1 Access to Primary Health Care Services in Botswana

In Botswana, healthcare is delivered through a decentralized system with primary health care being the pillar of the delivery system. Botswana has an extensive network of health facilities (hospital, clinics, health posts, mobile stops) spread over the twenty nine (29) health districts. Historically, health services were under the management of both the Ministry of Health (MOH), which is responsible for all hospitals (referral, districts and primary) and the Ministry of Local Government, which was in charge of clinics, health posts and mobile stops. However recently, the operation of all

health facilities, including clinics, health posts and mobile stops were transferred to the Ministry of Health.

Table 1.1.1 gives a summary of populations with access to health services within a 15 km, 8km and 5 km radius of the nearest Health Facility by Urban/ Rural Residence. At national level, 84 per cent of population is within a 5 km radius of the nearest health facility. There is 11 per cent of population which is within 5 km to 8 km radius, which translate into a total of 95 per cent population within an 8 km radius. The urban areas data show that 96 per cent of urban residents are within a 5 km radius of the nearest Health Facility compared to 72 per cent of rural residents. Only 4 per cent of urban residents live within 5km to 8km radius of the nearest health facility. This entire 4 per cent is found in Palapye and Jwaneng areas.

In rural areas, 72 per cent of population is within a 5 km radius of the nearest health facility, 17 per cent is within 5 to 8 km. Most of the remainder, 11 per cent is within 8 to 15 km radius.

North East, Southern and Kgalagadi South all have (100%) their inhabitants within 5 km radius of a health facility. Maun, Serowe (excl. Palapye), Mahalapye, Kgatleng, Tutume and Gumare have 80-99 per cent of their inhabitants within 5 km radius. Bobirwa, Ghanzi, Chobe and Kgalagadi North have 60-79 per cent of their inhabitants within a 5 km radius. Kweneng West has the lowest proportion of population within a 5 km radius at 5 per cent. South East is at 14 per cent, followed by Boteti with 22 per cent. Kweneng West tends to have the highest proportion of its inhabitants (55.0%) residing between 8 and 15 km radius of the health facility.

Table 1.1.1 Percentage of Population with Access to Primary Health Care Services within 15km, 8 km and 5 km Radius from Health Facility by Urban/Rural Residence - April 2007

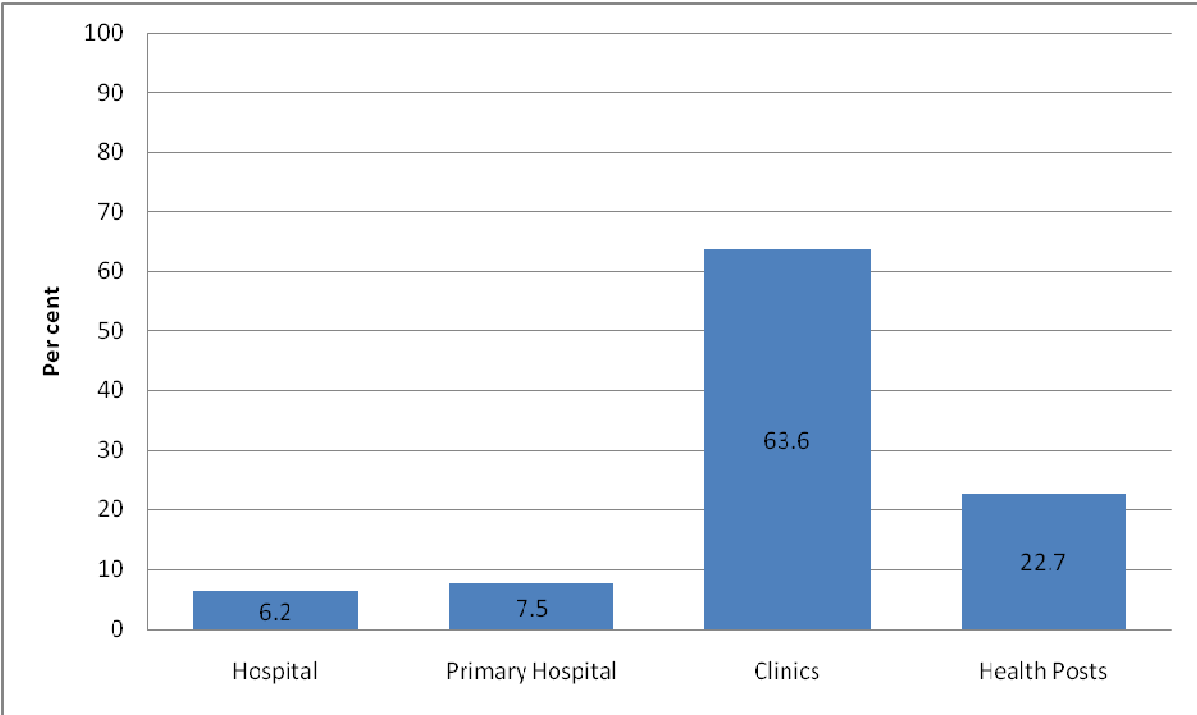

Residence	Percentage of population Between 8 and 15 km radius from facility	Percentage of population Between 5 and 8 km radius from facility.	Percentage of population Within 5 km radius from facility
Urban			
Gaborone	-	-	100

Gumare	-	5	95
South East (excl.Tlokweng)	34	52	14
Kweneng West	55	40	5
Rural Total	11	17	72
National Total	5	11	84

Note: The information in **Table 1.1.1** was collected between December 2006 and April 2007 in all health districts in Botswana. Health districts were requested to submit distances that clients travel to access primary Health Facilities. The Health Statistics Unit then calculated proportion of population in given localities as per the given distances from the nearest facility using the 2007 Population projections.

2.0 OUTPATIENT STATISTICS

Nationally, clinics are the most frequently used health facility for outpatient services. They account for 63.6 per cent of all outpatient attendances, followed by health posts (22.7%), hospitals (6.2%) and primary hospitals (7.5%). This pattern is consistent with government’s policy of encouraging patients to utilize clinics and health post services prior to visiting hospitals. This pattern reflects the fact that clinics and health posts are the most numerous, most geographically spread, and therefore the most accessible of all types of health facilities.

Figure 2.1.1 Percentage of Outpatient Attendances by Health Facility Type - 2009

2.2 Outpatient Morbidity

A total of 4,399,276 disease cases were recorded for outpatient attendances in 2009. This is an increase of 22.1 per cent from 3,601,739 cases in 2008. The major contributing condition in outpatient morbidity was ‘Other diseases/conditions’, most notably cough and cold (28.3%),

followed by diseases of the respiratory system (19.0%), and the musculoskeletal system (9.2%) (Table 2.2.1).

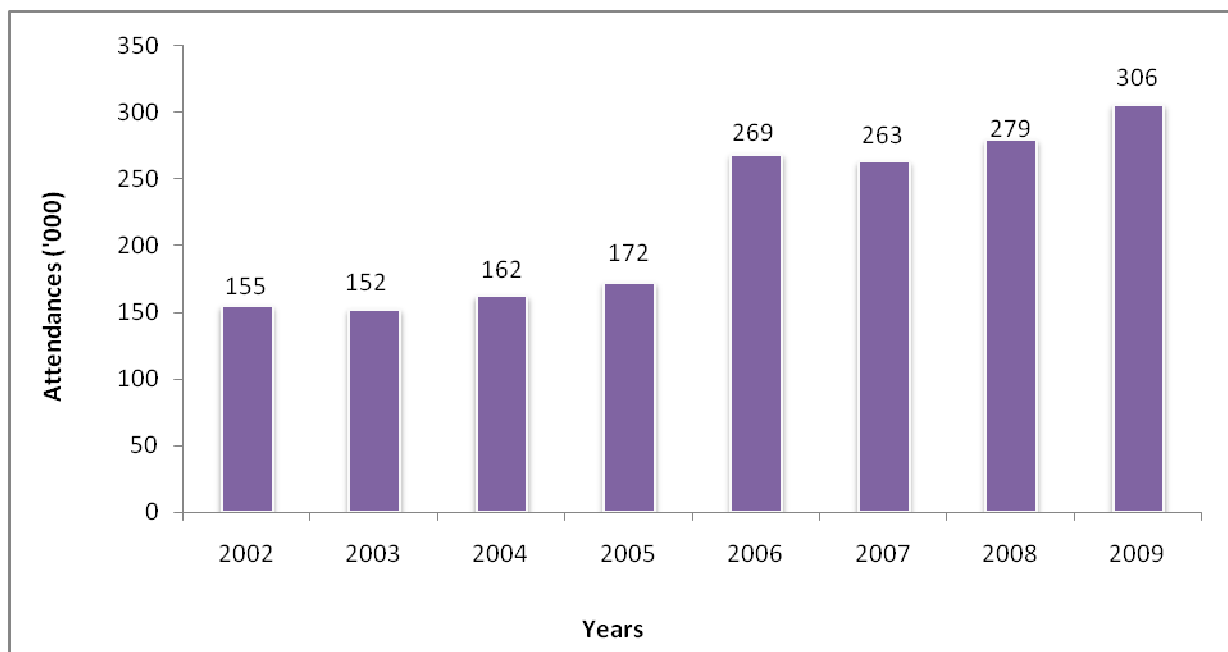

Table 2.2.1 Top 10 causes of outpatient morbidity – 2009

Diagnosis(Other diseases)	Attendances	Per cent
Other diseases/conditions	1,189,837	27.0
Diseases of respiratory system (e.g. cough and cold)	949,658	21.6
Diseases of musculoskeletal system	475,648	10.8
Skin conditions	411,315	9.3
Hypertension	349,393	7.9
Eye diseases/conditions	150,269	3.4
Tonsillitis	137,210	3.1
Other External causes of injuries	122,533	2.8
HIV positive	88,079	2.0
Ear diseases/conditions	86,577	2.0
Causes Specified Above	3,960,519	90.0
Other Diagnosis	438,757	10.0
Total(All attendances)	4,399,276	100.0

2.3 Sexually Transmitted Infections

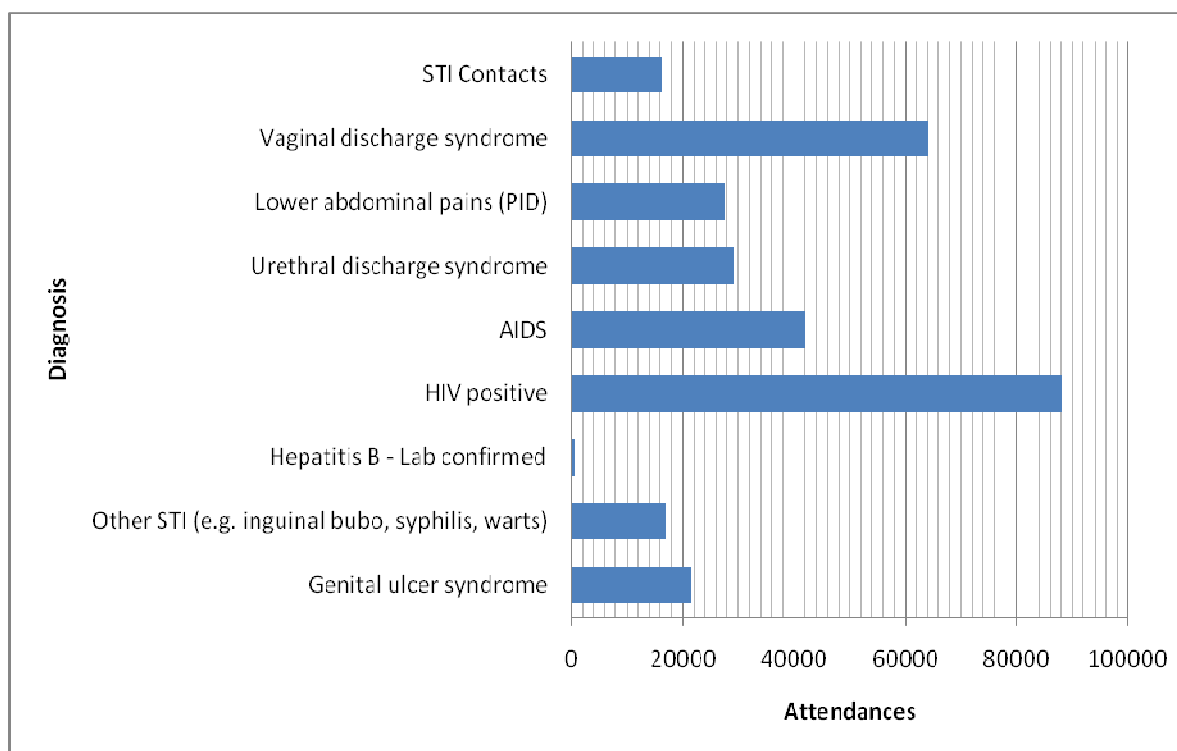

There were 305,932 total attendances for Sexually Transmitted Infections (STIs) in 2009, an increase of 9.5 per cent from 279,477 cases in 2008 (**Figure 2.3.1**). Notable is the increase in the STIs cases between 2003 and 2006; from 152,430 recorded in 2003 to 162,228 cases recorded in 2004 and a sharp rise to over 269,000 in 2006 (**Figure 2.3.1**). This increase probably is the result of reporting changes which in 2006 began to include HIV positive and AIDS cases in STI category.

Figure 2.3.1 Number of Sexually Transmitted Infection Attendances 2002-2009 ('000)

STIs reports are much higher amongst females (62.6%) than males (37.4%). Amongst age groups, STIs are higher within the age group 30 years and above (55.8%) while 0-14 is the lowest, constituting 4.3 per cent (**Table 3.5**). The most common diagnosis of STIs in 2008 was HIV positive (88,079 cases) accounting for 28.8 per cent of total attendances, followed by vaginal discharge syndrome (21.0%). Other common conditions were AIDS (13.7%), lower abdominal pains (9.0%) and urethral discharge syndrome (9.5%) (**Figure 2.3.2**).

Figure 2.3.2 Sexually Transmitted Infections Attendances – 2009

2.4 Family Planning (FP), Antenatal Care Visits and Condom Uptake

Family Planning (FP)

Family planning (FP) visits have decreased by 4.0 per cent from 2,161,849 in 2008 to 2,075,162 in 2009. The number of new attendances in 2009 was 425,362 compared to 1,383,863 of repeat attendances. **Table 3.7** shows the number of new and repeat FP visits in 2009 by preferred method of contraception. The preferred method of contraception for both new and repeat cases was the male condom 85.5 and 86.7 per cent, respectively. The second preferred method of FP was pill low dose (2.0% for new cases and 5.6% for repeat cases). Kweneng East health district reported the highest number of FP visits among all health districts in 2009 with a total of 477,327 attendances.

Antenatal Care Visits (ANC)

The total number of antenatal visits in 2009 was 343,995. This represented an increase of 9.5 per cent from 314,087 visits in 2008. In 2009 only 343,995 ANC visits were recorded, and of this number, 50,218 were new and 293,777 were repeat cases. This represents an increase of 8.5 per cent in new visits and 10.0 per cent in repeat visits from the 2008 figures.

The majority of attendances in 2009 were in the age groups 20-24 with 109,966 visits, followed by the age group 25-29 with 99,984 visits, and age group 30-39 with 81,299 visits. These figures represent an increase of 8.7, 14.7 and 11.9 per cent from the 2008 attendances for the same age groups respectively.

Gaborone health district recorded the highest number of antenatal visits at (38,991), followed by Kweneng East (32,957). Charleshill had the lowest number (1,705).

Figure 2.4.1 Number of Family Planning and Ante Natal Care Visits 2001-2009 ('000)

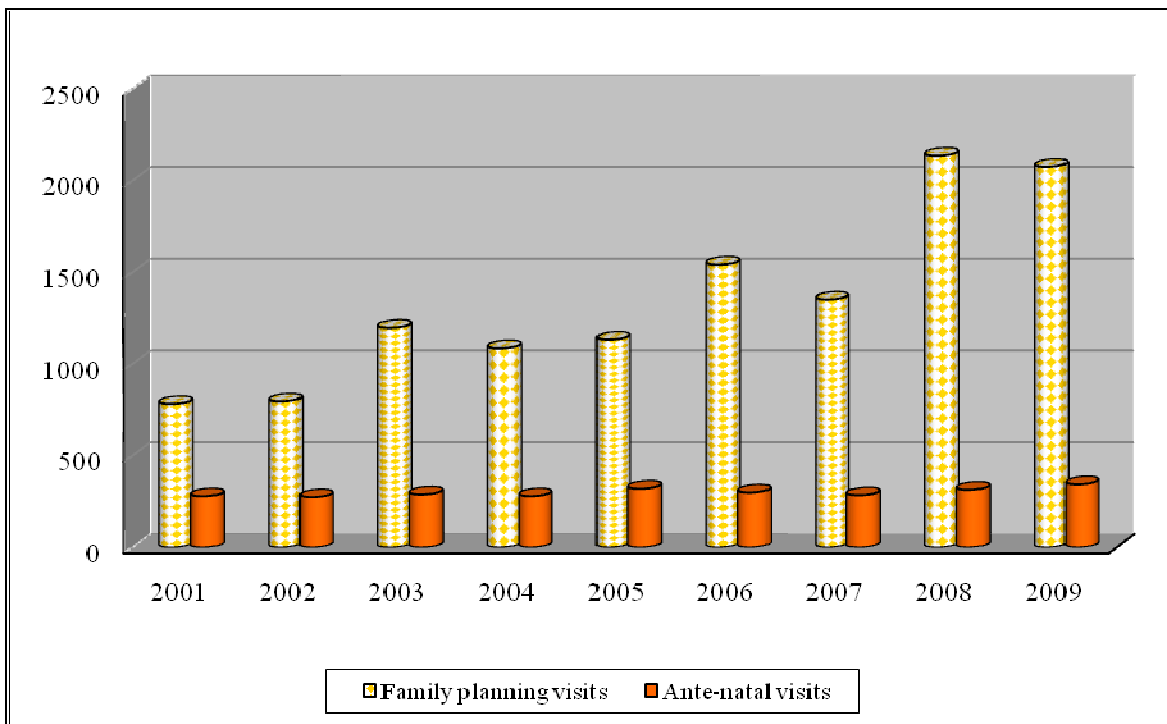

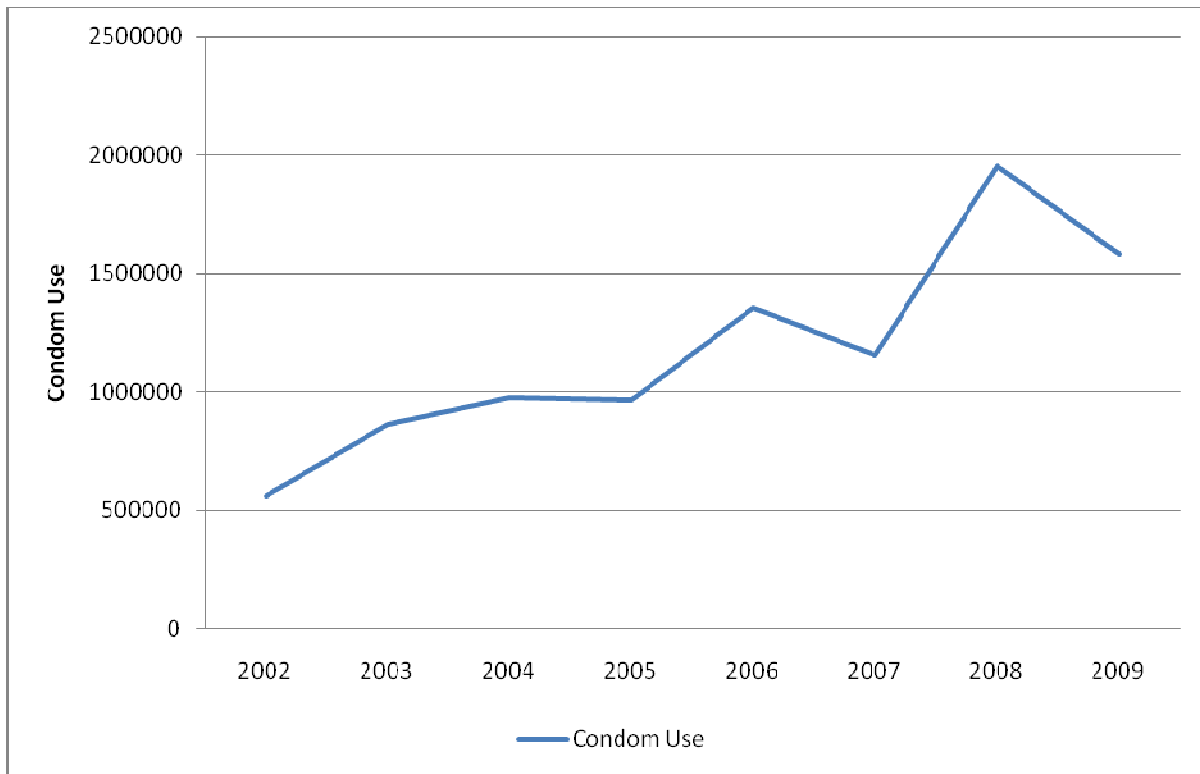

Figure 2.4.2 Condom Uptake 2002 - 2009

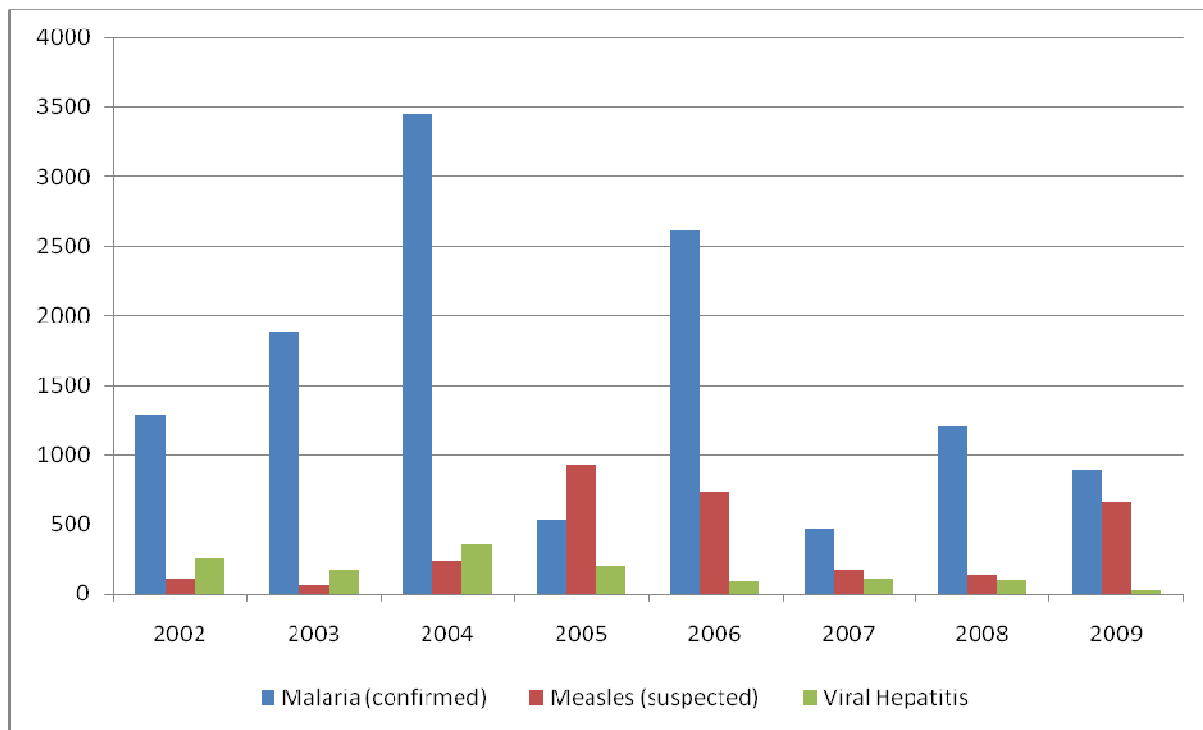

A trend analysis shows that use of condoms has been on the increase since 2002. For example, condom use increased from just fewer than 600,000 condoms in 2002 to just fewer than 1,000,000 condoms in 2004. Between 2004 and 2005, condom use slowed down before increasing sharply between 2005 and 2006. From 2006 to 2007 there was a decrease in condom use followed by a very steep rise between 2007 and 2008.

In 2009 male condom use declined to 1,626,838 from 1,956,105 in 2008 which represent a 16.8 per cent drop in condom use. The foregoing figures refer to both male and female condom use. Female condom use was first recorded in 2008. The 2008 figure shows an uptake of 38,171 female condoms, comprising 9,716 new visits and 28,455 repeat visits. In 2009 female condom use stood at 45,715 comprising 23,425 new and 22,290 repeat visits.

2.5 Notifiable Diseases

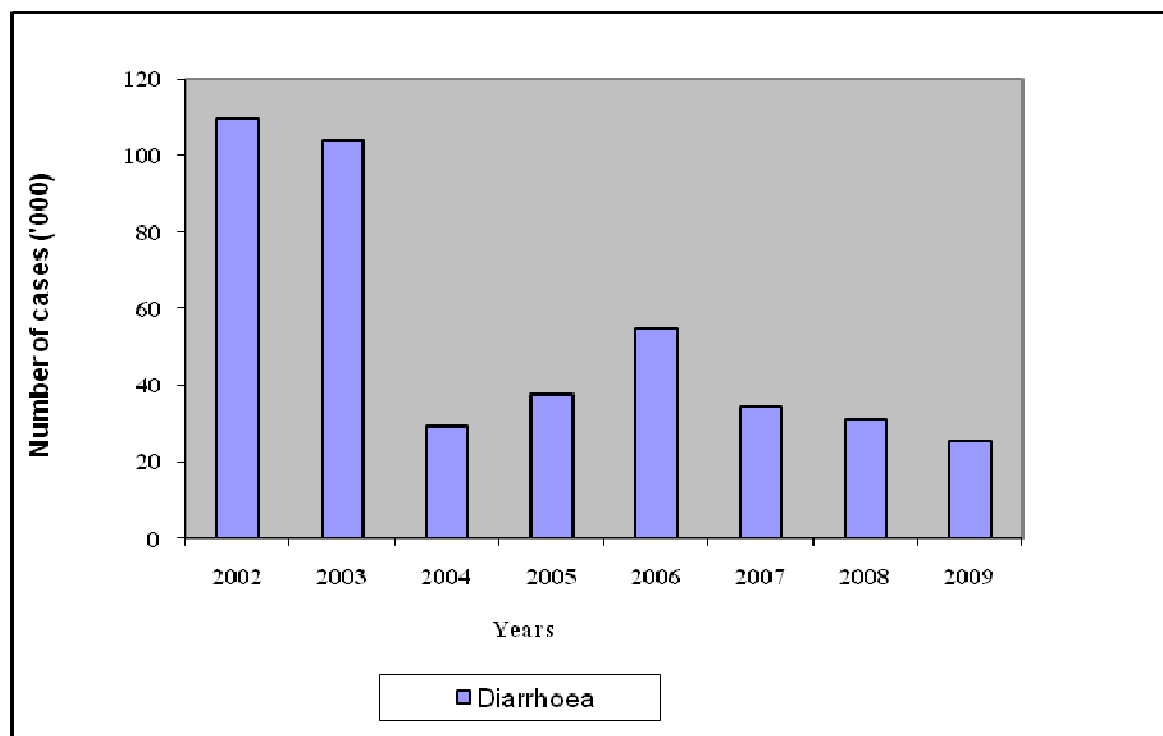

The notifiable disease category includes malaria, viral hepatitis, measles and diarrhoea. **Figure 2.5.1** reflects marginal fluctuations in the number of confirmed malaria, viral hepatitis and measles cases between 2002 and 2008. There was a marked increase in malaria cases during the period 2002-2004 (from 1,284 cases in 2002 to 3,453 cases in 2004, 168.9% increase), followed by a significant decrease in 2005 (530 cases, 84.7% decrease), and an increase in 2006 (2,606 cases, 391.7% increase). The number of malaria cases recorded in 2007 was the lowest recorded during the 2002-2009 periods. However, 2009 recorded less cases of malaria (885 confirmed cases) compared to 2008 (1,201 confirmed cases). From 2002 to 2009, the number of suspected measles and viral hepatitis were relatively low compared to malaria cases. The number of suspected measles cases was highest in 2005 and 2006 (926 and 732 cases respectively). In 2009 there was a sharp increase in the number of suspected measles cases. A total of 662 confirmed cases of measles were recorded in 2009 compared to 141 cases in 2008, representing a 369.5 per cent increase. Viral hepatitis decreased from 352 cases in 2004 to 85 cases in 2006. It increased slightly between 2007 and 2008 (108 and 105 cases, respectively).

Figure 2.5.1 Trends in Selected Notifiable Diseases, Botswana 2002-2009

The recorded cases of diarrhoea are substantial (**Figure 2.5.2**). They were high in 2002 and 2003 (109,466 and 103,724 cases respectively). The recorded cases dropped by 68.0 per cent from 103,724 in 2003 to 29,322 in 2004, followed by an increase to 55,015 cases in 2006. Finally, between 2007 and 2008 diarrhoea cases recorded a 9.0 per cent decrease followed by a further drop of 18.5 per cent in 2009 compared to 2008.

Figure 2.5.2 Trend in Outpatient Attendances for Diarrhoea 2002-2009

2.6 Eye Outpatient

The number of eye outpatient attendances in 2009 was 118,442 comprising 75,363 new and 43,079 repeat case compared with 104,720 in 2008 made up of 68,710 new and 36,010 repeat attendances. This represents a modest increase of 13.1 per cent from the 2008 total figure of 104,720 visits. The most age group attending most was 15 to 44 years which recorded 51,347 (43.4%) visits, followed by 65 years and above with 27,899 (23.6%). Females constituted 68,962 (58.2%) of the total number. These patterns of attendance by age group and gender are similar to those observed in 2008.

2.7 Non Institutional Statistics

In 2009, there were 220 non-institutional live births, which represent a decrease of 70.6 per cent compared to 749 recorded in 2008. However, between 2007 and 2008 there was an increase of

210.8 per cent from 241 non-institutional live births in 2007 to 749 live births in 2008. Most cases were reported at Gantsi health district followed by Bobirwa health district with 169 and 23, respectively (**Table 3.12**).

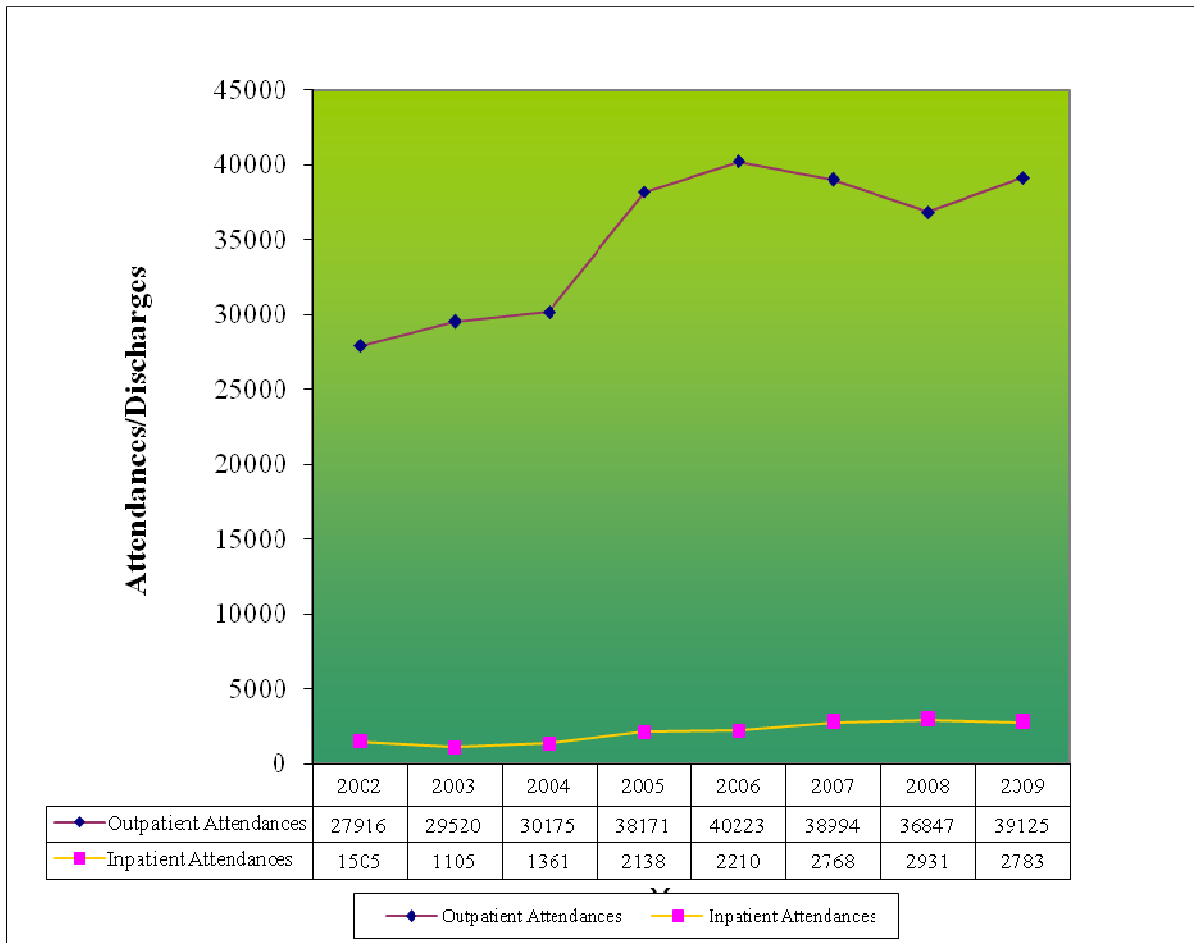

A total of 104 non-institutional deaths were reported in 2009, a drop of 56.8 per cent compared to 241 cases in 2008. Goodhope health district reported most deaths with 34 cases followed by Bobirwa and Gantsi health district with 24 cases each.

2.8 Mental Health

There has been an upward trend in the psychiatric attendances for the period 2002 to 2006 followed by a drop in 2007 (2% decrease from 42,433 in 2006 to 41,762 in 2007) and a further drop in 2008 (5% decrease from 41,762 in 2007 to 39,778 in 2008) followed by a moderate rise in 2009 (5% increase from 39,778 in 2008 to 41,908 in 2009) (**See Figure 2.8.1**).

The highest number of psychiatric attendances recorded in 2009 was for schizophrenia with a total of 16,704 outpatient (42.7%) and 609 inpatient (21.9%). Other conditions that recorded high numbers are depressive episodes with a total of 5,547 outpatient (14.2%) and 109 inpatient (3.9%), other specified mental disorders due to brain damage and dysfunction and to physical disease with a total of 4,551 outpatient (11.6%) and 28 inpatient (1.0%), and schizoaffective disorders with 1,965 outpatient (5.0%) and 197 inpatient (7.1%). Other acute and transient psychotic disorders also recorded relatively high frequency at 1,813 outpatient (4.6%) and 259 inpatient (9.3%). Overall, male attendances were higher than female attendances in almost all the age groups and conditions. There were 20,585 male (52.6%) and 18,540 female outpatient psychiatric attendances (47.4%). The number of inpatient psychiatric attendances was 1,810 males (65.0%), and 973 females (35.0%).

Figure 2.8.1: Trend of Psychiatric Attendances and Discharges: 2002 -2009

3.0 INPATIENT STATISTICS

3.1 Hospital Activities

Hospital activities were recorded and reported for general hospitals, primary hospitals and clinics with maternity wards. For the most recent five years (2005-2009), the number of beds increased from 3,955 to 4,561 (15.3%) and inpatient admissions decreased from 175,125 to 174,867 (0.1%) respectively from 2005 to 2009 (**Table 3.1.1**). There was also an increase in number of patient days from 908,300 to 1,276,294 (40.5%) in the same period (**Table 3.1.1**). The frequency of inpatient deaths fluctuated between 2003 and 2005. There was a slight decrease (2.9%) in the number of inpatient deaths in 2009 (7,491) compared to 2008 (7,714).

Bed turnover rate is the average number of patients during the year that has occupied each bed at a given facility. The bed turnover rate for 2009 was 39.0 patients per bed. This rate varied only marginally from 2005-2009; in the range 39 to 42. There has been a relatively steady increase in occupancy rate between 2003 and 2009 (**Table 3.1.1**). The occupancy rate for 2009 was 76.7 per cent, the highest observed since 2003. The average length of stay increased to seven (7) days.

Table 3.1.1 Trends in hospital Activities by Type: 2003-2008

	2003	2004	2005	2006	2007	2008	2009
Number of Beds	3,816	3,889	3,955	4,059	4,155	4,239	4,561

3.2 Morbidity and Mortality

In 2009 there were 126,381 inpatient morbidities. This number represents a 0.5 per cent decrease from the 127,008 registered in 2008. Inpatient morbidity attendances had previously increased

between 2003 and 2005, then dropped slightly in 2006 before rising again in 2007, and declining in 2008 (Figure 3.2.1).

There was a decline in inpatient mortality (7.1 %) from 7,487 registered deaths in 2008 to 6,952 deaths in 2009. The number of deaths between the periods 2007 to 2009 and 2004 to 2006 remained relatively stable compared to morbidity, with very slight decrease in 2003 and 2004 (Figure 3.2.1).

Figure 3.2.1 Inpatient Morbidity and Mortality 2000-2009

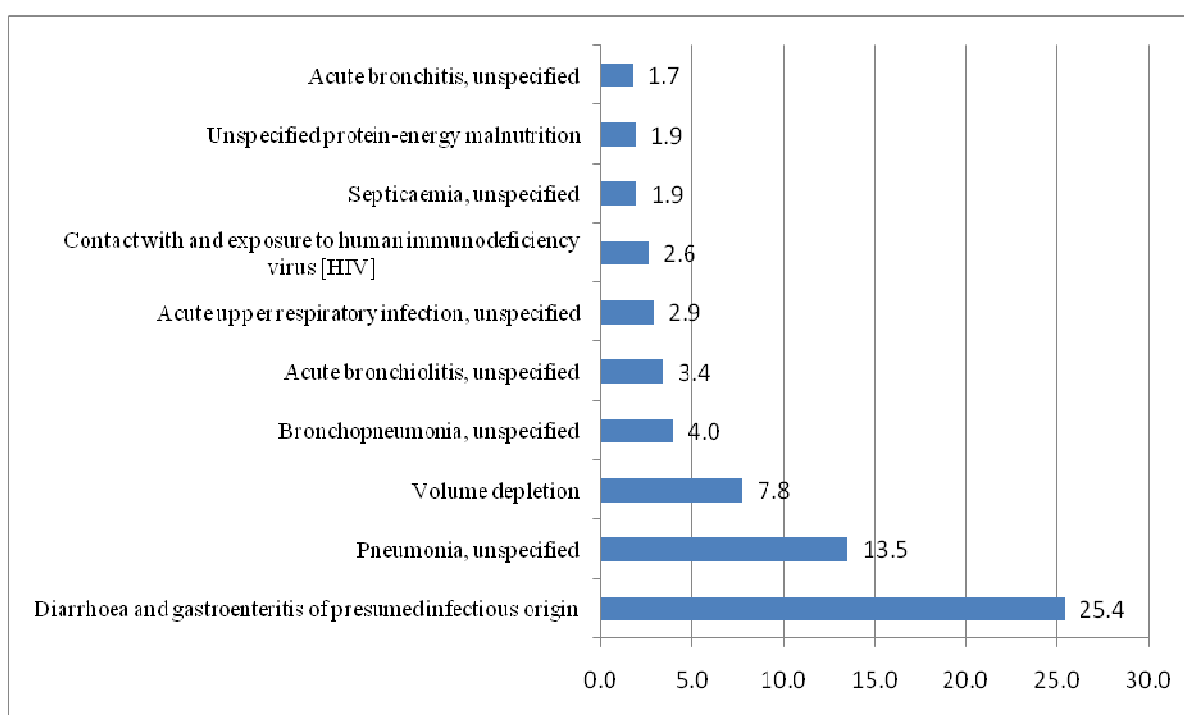

3.3 Morbidity of Infant, Children (<5yrs) and All Ages

Causes of Infant Morbidity

Figure 3.3.1 shows major causes of infant morbidity in 2009. The results show that diarrhoea (25.4%), pneumonia (13.5%) and malnutrition/volume depletion (7.8%) accounted for a large

portion of infant morbidity in 2009, while other causes each accounted for about 3.4 per cent or fewer of infant sicknesses.

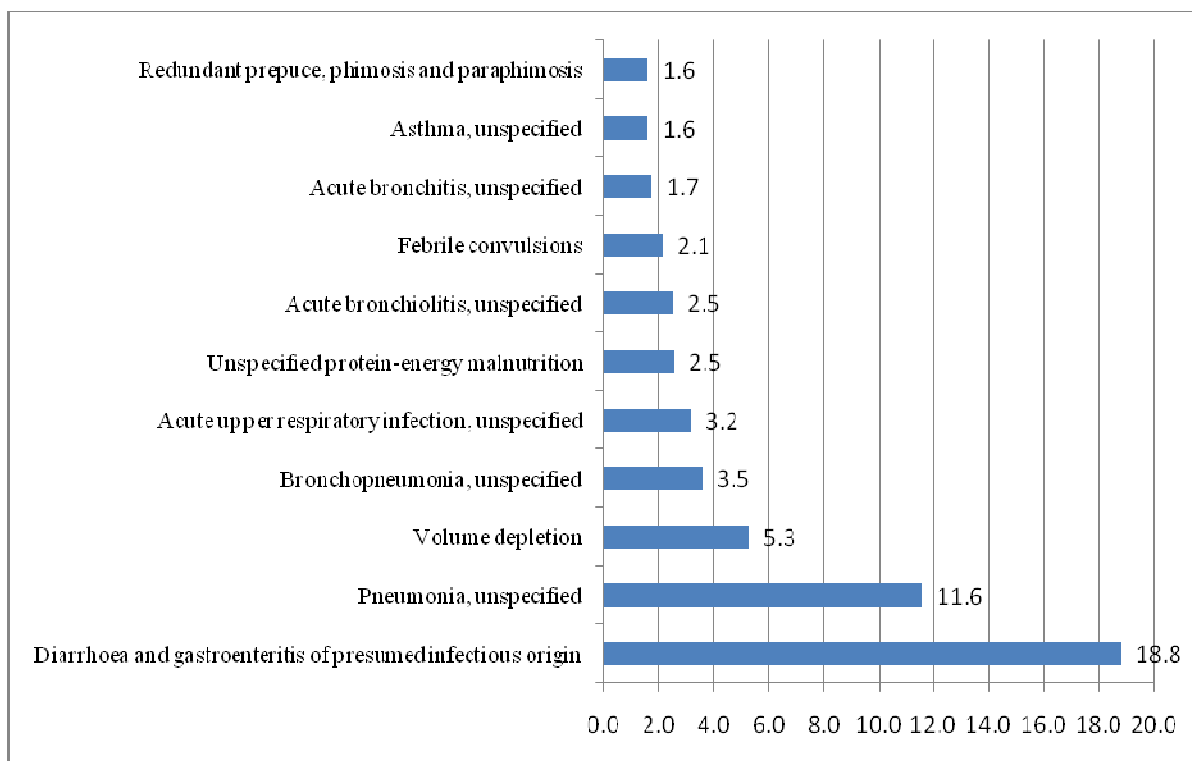

Figure 3.3.1 Major Causes of Infant Morbidity - 2009

Causes of Child Morbidity

Figure 3.3.1a shows major causes of child morbidity in 2009. The results show that diarrhoea accounted for a fifth (18.8%) of child morbidity, followed by pneumonia (11.6%). The rest of the major causes each accounted for less than one in every twenty cases of child morbidity.

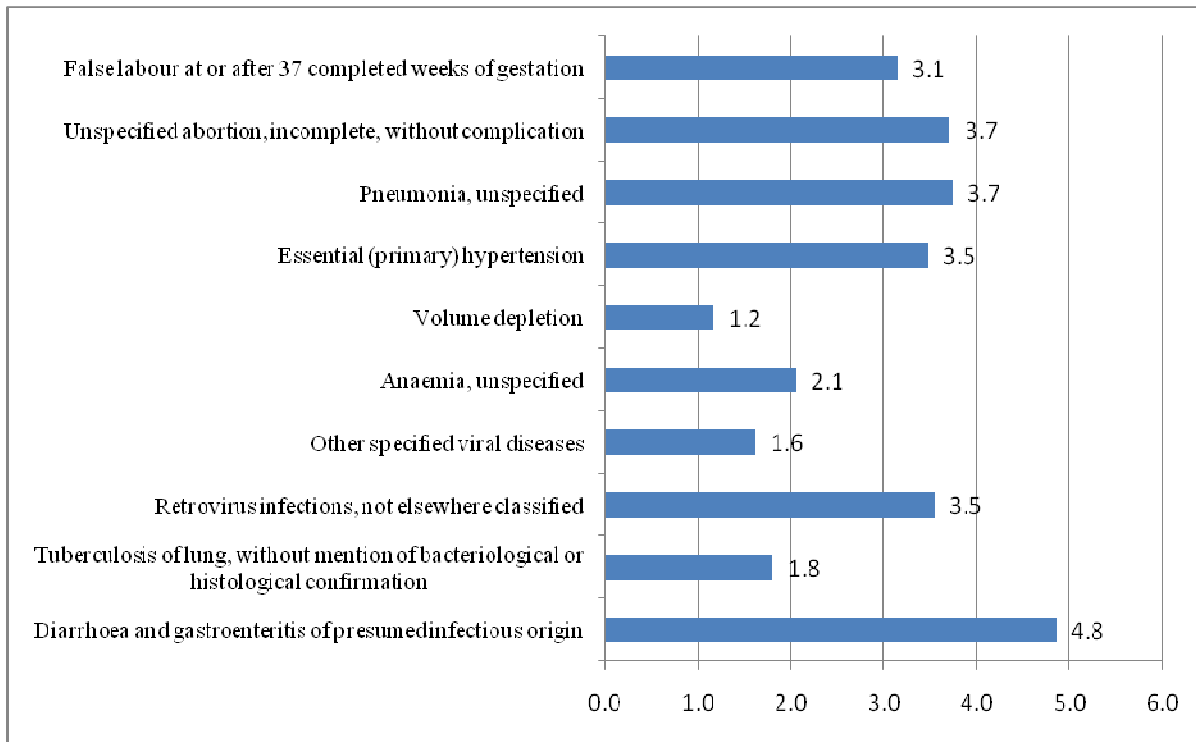

Figure 3.3.1a Major Causes of Child Morbidity - 2009

Causes of Inpatient Morbidity

Figure 3.3.1b shows major causes of inpatient morbidity in 2009. While diarrhoea is still the most significant cause of general inpatient morbidity, it accounts for a relatively small percentage (4.8%) of all cases of inpatient morbidity compared to infant and child morbidity cases. Significantly, all of the identified major causes of general inpatient morbidity, with the exception of diarrhoea, each accounted for less than 4 per cent of the cases of inpatient morbidity in 2009.

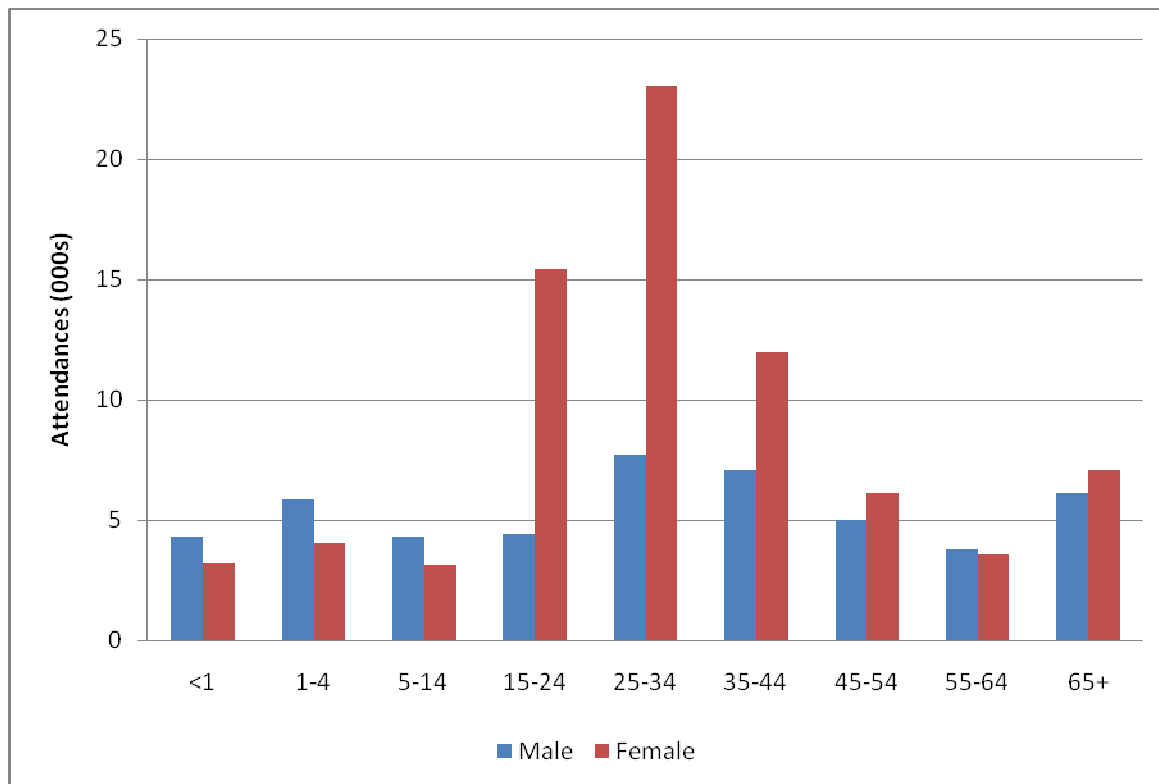

Figure 3.3.1b Major Causes of Inpatient Morbidity - 2009

Morbidity by Age and Sex

Figure 3.3.1c shows morbidity by age group and sex. Attendance starts off low for younger ages, and reaches a peak for patients in the late twenties to mid-thirties before declining among those over 45 years. The pattern of attendance differs between males and females. At ages below fifteen, the number of males is slightly higher than that of females. However, beyond age 15 and into the mid-thirties, there are significantly more females than male attendees. Among men, the age groups 25-34, 35-44 and 65+ account for 16.0 per cent, 14.6 per cent and 10.0 per cent of morbidity cases, respectively. Among women, age groups 15-24, 25-34 and 35-44, account for 19.9 per cent, 30.0 per cent and 15.0 per cent of morbidity cases, respectively. **Figure 3.3.1c** further shows higher morbidity for male aged 1-4 (12.0%) compared to females children (5.0%) in the same age group.

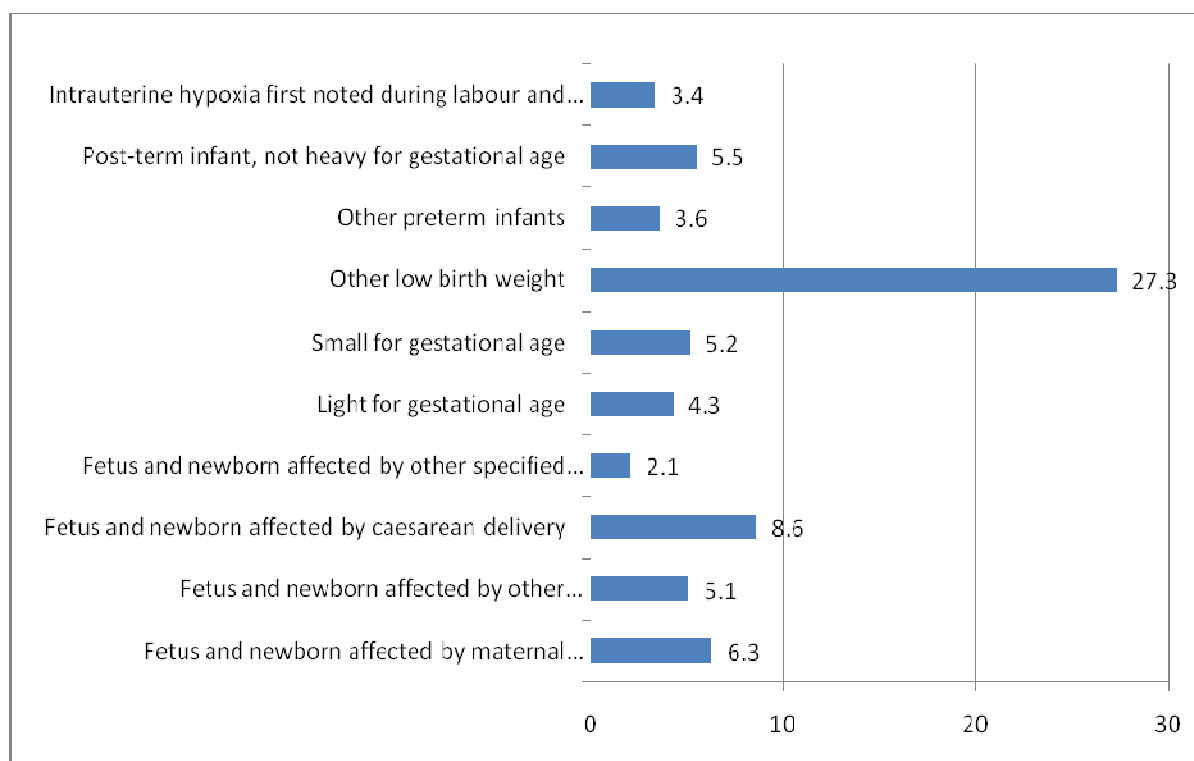

Figure 3.3.1c Inpatient Morbidity by age group and sex - 2009

3.4 Neonatal Morbidity

Table 4.12 shows that there were 13,527 inpatient attendances for neonatal (aged less than 28 days) morbidity in 2009 compared with 12,541 inpatient attendances in 2008. The plurality of inpatient neonatal morbidity was caused by ‘disorders related to length of gestation and fetal growth’ (49.8%), followed by fetus and newborn affected by maternal factors and by complications of pregnancy, labor and delivery (33.5%). The most frequent cause of neonatal morbidity (among the major causes of morbidity), was ‘Other low birth weight’ which accounted for 27.3 per cent of inpatient attendances followed by fetus and newborn affected by caesarean delivery accounting for 8.6 per cent (**Figure 3.4.1**).

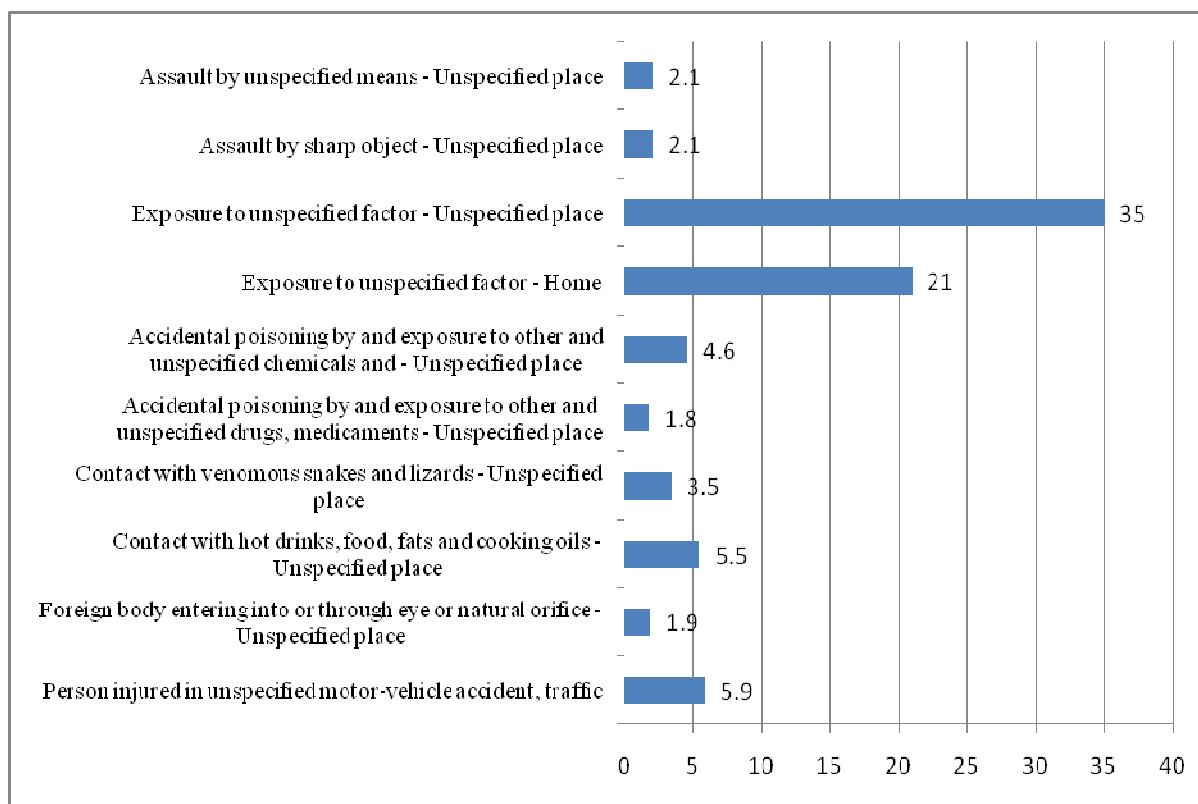

Figure 3.4.1 Major Causes of Neonatal Inpatient Morbidity - 2009

3.5 External Causes of Morbidity

In 2009, there were 11,659 external causes of injuries resulting in inpatient attendance in Botswana (**Table 4.19**). This represents a decrease of 1.5 per cent from 2008 when there were 11,833 attendances. Males accounted for 7,039 (60.5%) in 2009 while females accounted for 4,600 (39.5%) of these attendances. Among men, the age group with the highest frequency of injuries by external causes was men from 25-34 with 1,737 attendances (24.6% of all male external causes of morbidity). The greatest frequency of inpatient external injuries was caused by accidental exposure to unspecified factors constituting 56.2 per cent of all the injuries (**Figure 3.5.1**).

Figure 3.5.1 Per cent distribution of Inpatient External Causes of Injuries (all ages excluding neonatal) - 2009

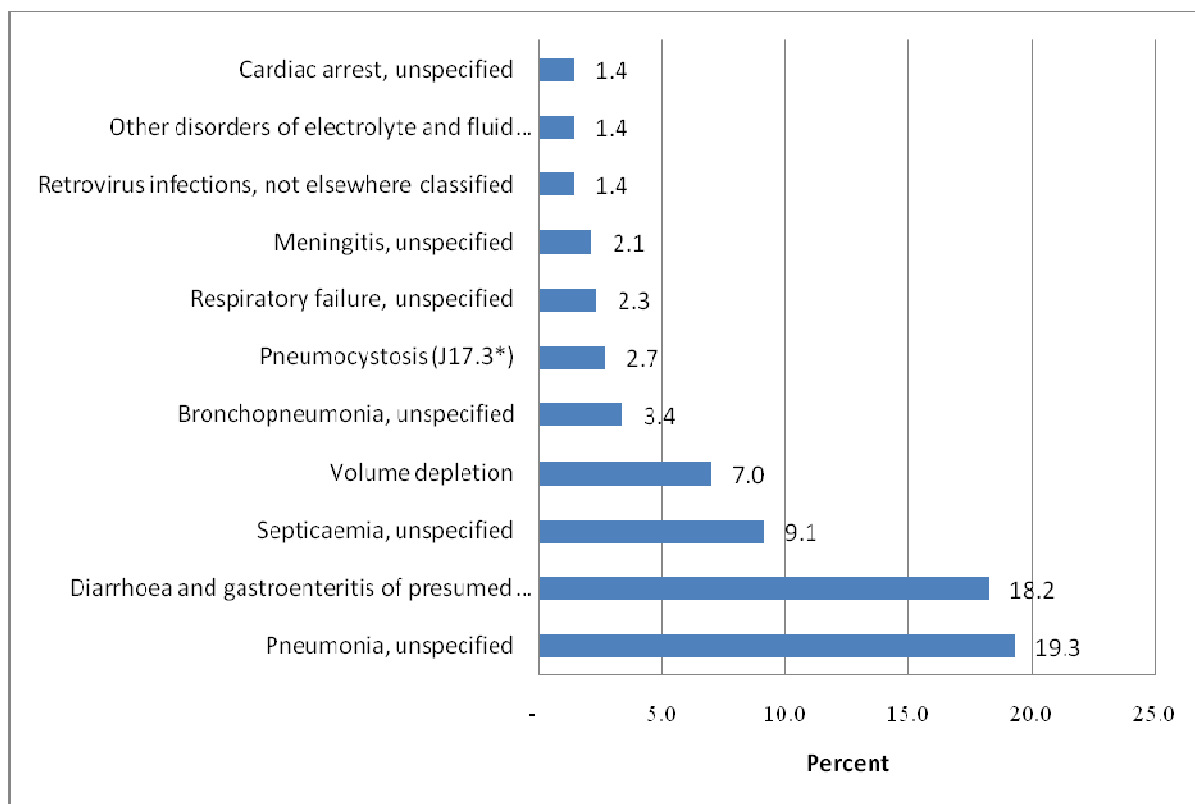

3.6 Mortality of Infant, children and all ages

Major Causes of Infant Mortality

Figure 3.6.1 shows major causes of infant inpatient mortality. They are pneumonia (19.3%); diarrhoea (18.2%); septicemia (9.1%); volume depletion (7.0%) and Broncopneumonia unspecified (3.4%). Additional identified major causes each accounted for a less than 3 per cent of the cases recorded in 2009.

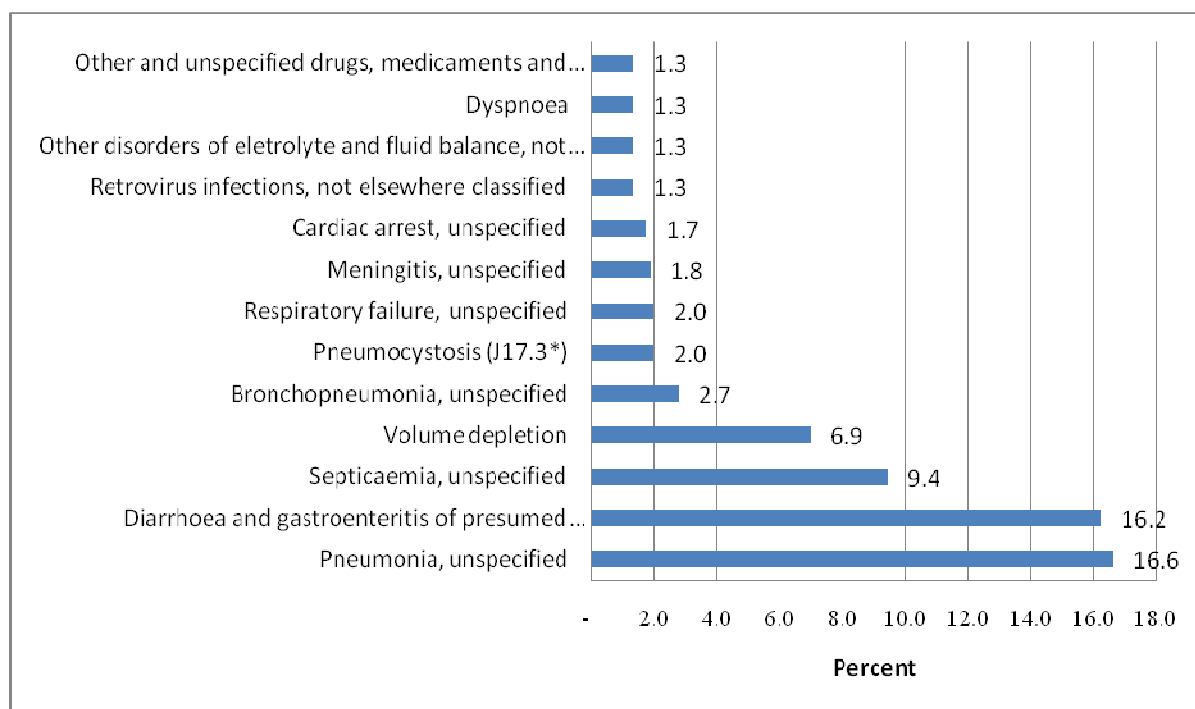

Figure 3.6.1 Major Causes of Infant Mortality - 2009

Major Causes of Child Mortality

Figure 3.6.1a shows the major causes of child mortality in 2009. Diarrhoea accounts for less than a fifth (16.2%) of child deaths, and is placed second to Pneumonia which leads the pack with 16.6 per cent of child deaths.

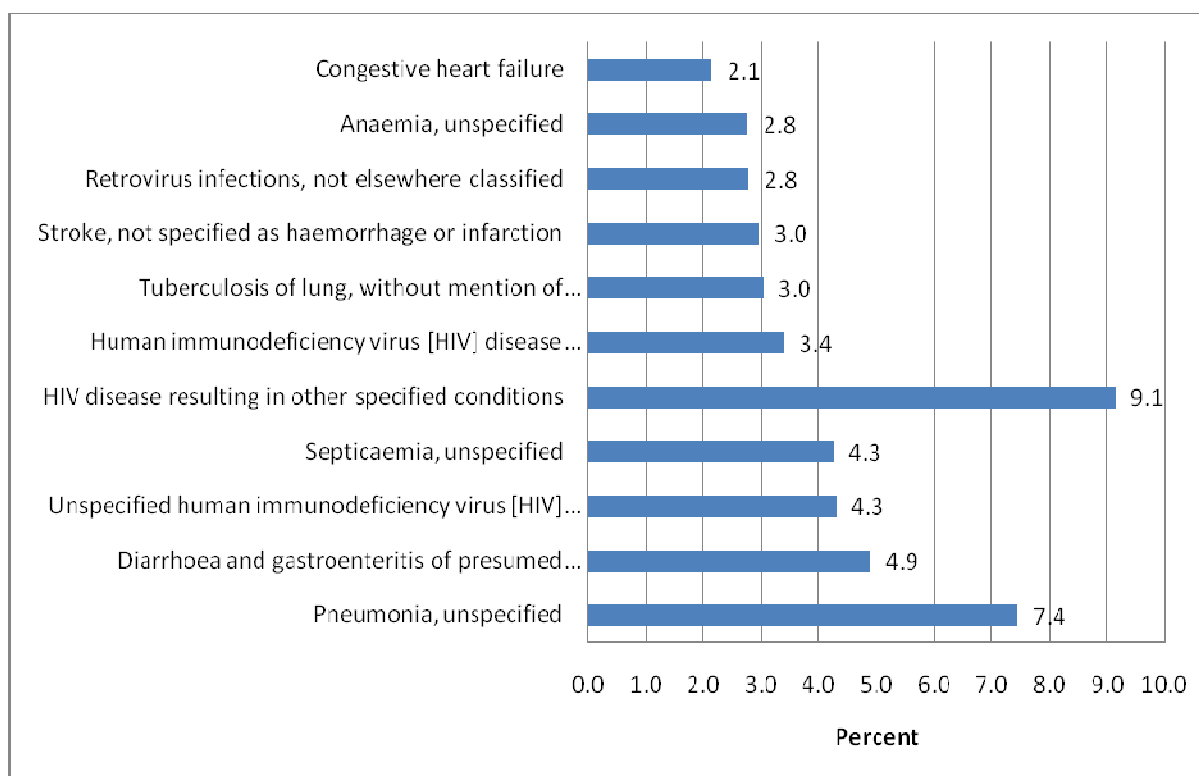

Figure 3.6.1a Major Causes of Child Mortality, 2009

Major Causes of Inpatient Mortality

Figure 3.6.1b shows the major causes of general inpatient mortality in 2009. The results show that HIV disease resulting in other specified conditions accounts for 9.1 per cent of all deaths, followed by pneumonia (7.4%) and diarrhoea and gastroenteritis (4.9%).

Figure 3.6.1b Major Causes of Inpatient Mortality - 2009

3.7 Neonatal Mortality

In 2009, there were 547 institutional neonatal deaths (aged less than 28 days) in Botswana compared with 616 institutional neonatal deaths in 2008. Males accounted for 306 (55.9 %) of this number while females accounted for 241 (44.1 %). The data also show that the greatest proportion of deaths occurred among one day olds (18.3 %) (**Figure 3.7.1**). The plurality of inpatient neonatal mortality was caused by 'respiratory and cardiovascular disorders specific to the perinatal period' (38.9%), followed by 'disorders related to length of gestation and fetal growth' (22.5%). The most common cause of neonatal deaths (among the major causes) was bacterial sepsis of newborn, unspecified (97 cases) accounting for 17.7 per cent of all neonatal deaths, followed by respiratory distress syndrome of newborn with 58 cases (10.6%)(**Figure 3.7.2**).

Figure 3.7.1 Age of a Neonate at death - 2009

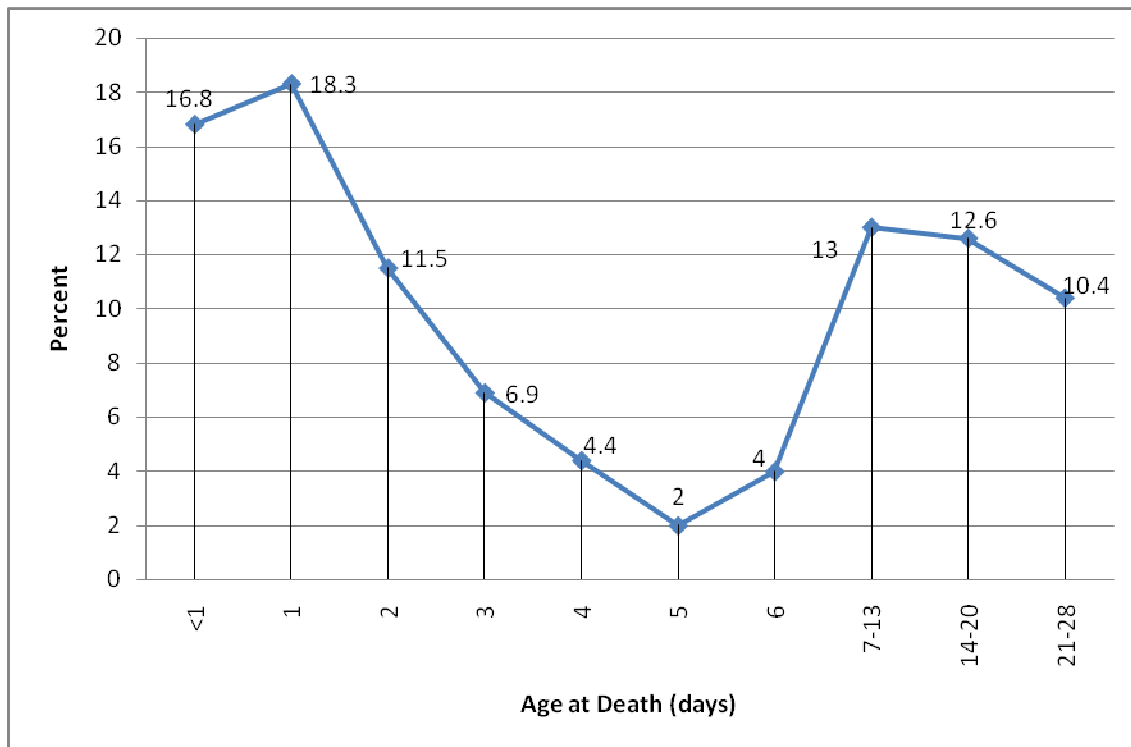

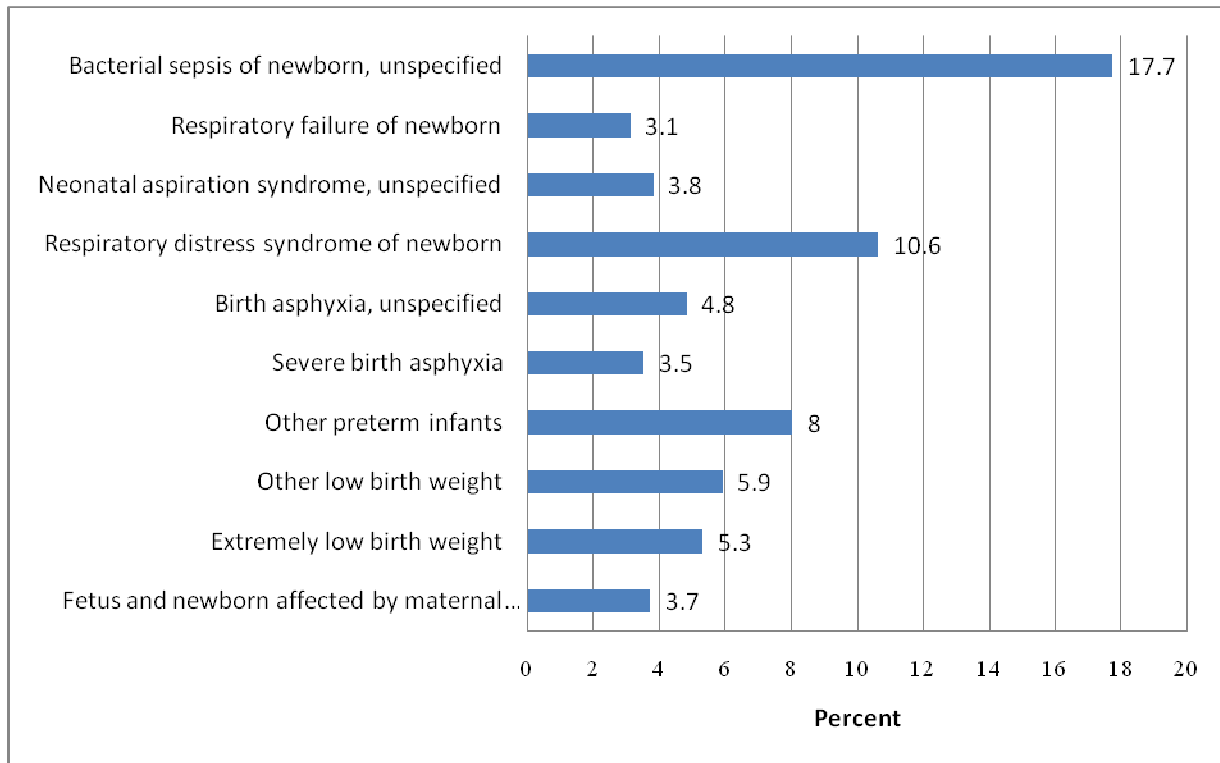

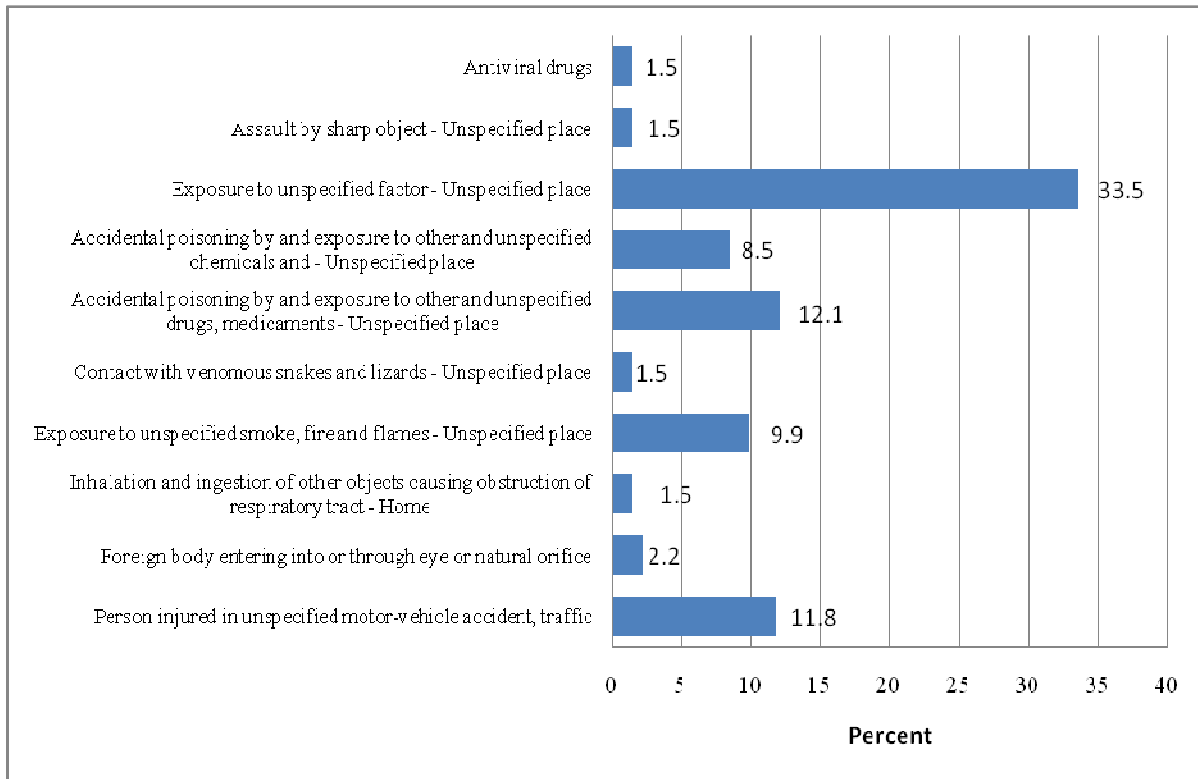

Figure 3.7.2 Per cent Distribution of Major Causes of Inpatient Neonatal Mortality-2009

3.8 External Causes of Death

In 2009, there were 272 deaths among inpatients admitted for external cause related morbidity. This represents a 19.5 per cent decrease from 2008 when there were 338 deaths attributed to external causes. Males accounted for 177 (65.1%) of the deaths, while females numbered 95 (34.9%). The age group with the most frequent mortality due to external causes was 25-34 year olds, accounting for 64 (23.5%) of deaths. The most common underlying external cause of death (major causes only) was exposure to unspecified factor (33.5%), followed by accidental poisoning by and exposure to other and unspecified drugs, medicaments, unspecified place(12.1%) and persons injured in unspecified motor-vehicle accident (11.8%) (**Figure 3.8.1**).

Figure 3.8.1 Per cent distribution of External Causes of Death among Inpatients (all ages excluding neonatal) - 2009

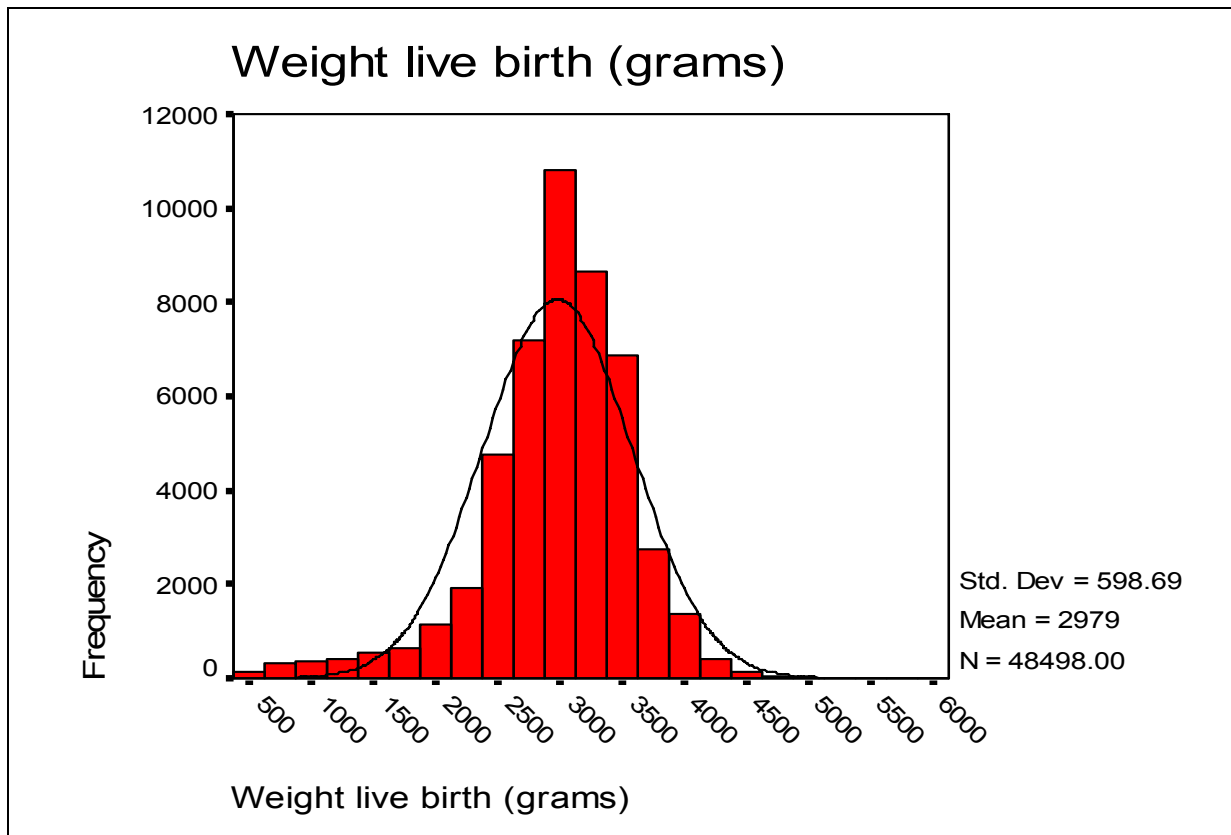

3.9 Births

In 2009 there were 48,708 inpatient births, of which 25,672 (52.7%) were male and 23,036 (47.3%) female. This shows an increase when compared with the 2008 figure of 40,878 inpatient births (19.2% increase). A small percentage (2.0%) of all births observed in 2009 was non-institutional. A total of 42,892 births (89.1% of all inpatient births) were through normal delivery, and 4,516 (9.4%) were through cesarean section. The most frequent age of an inpatient mother giving birth was 20-24 years, accounting for 15,005 (31.2%) of all mothers. Out of all institutional births, 699 were single stillbirths (1.5%) and 32 were twin stillbirths (<0.1%). The outcome of delivery was unspecified for 18 births (<0.1%) (See Table 4.14).

3.10 Birth weight

Table 4.18 indicates that birth weight was reported for almost all infants (99.6%). Almost 9 in 10 (85.3%) of infants were reported to have weighed more than 2,500 grams at birth. A total of 6,941 (14.3%) of infants had a birth-weight under 2,500g. The percentage of infants with birth weight under 2,500 grams was variable by sex and district. The proportion of births with a weight less than 2,500 grams was 6.9 per cent among males and 7.3 per cent among females, and it varied from five per cent in South East District to 20 per cent of births in Gantsi and Chobe. **Figure 3.10.1** presents the birth weight distribution. The frequency distribution of birth weight is normal, but with an extended tail of very low birth weight infants (<1000 grams) and a small excess of large births (>4500 grams). Recorded birth weight ranged from 400 to 6,060 grams.

Figure3.10.1 Frequency Distribution of Birth Weight- 2009

3.11 Maternal Mortality

As part of a collaborative effort to enable and improve the availability and quality of maternal mortality information, Statistics Botswana through its HSU and Ministry of Health are jointly ensuring the availability of number of live births and maternal deaths data. This section provides information on Maternal Mortality Ratio (MMR) in Botswana (**Table 3.11.1**).

The 2009 data show that there were 86 cases of maternal deaths recorded in Botswana resulting in the MMR of 184.5 maternal deaths per 100,000 live births. This compares with 88 maternal deaths and MMR of 195.60 in 2008. The most affected age group was 25-29 and 30-34 years. About a quarter (25.6%) of the deaths occurred to women in each of these age groups. HIV/AIDS constituted 12.8 per cent of maternal deaths. Immediate postpartum hemorrhage was 9.3 per cent and genital tract and pelvic infection following abortion and ectopic and molar pregnancy constituted 8.1 per cent (**Table 4.17**). The World Health Organization's International Classification of Diseases – Volume 10 (ICD 10) was used for the purpose of classification.

Table 3.11.1 Botswana Maternal Mortality Ratio- 2009

Institutional live births	46,404
Non-Institutional live births	220
Total Live Births	46,624
Maternal Deaths	86
Maternal Mortality Ratio (per 100,000 live births)	184.5

Conclusion

This report examined health statistics on a broad range of indicators. The findings reveal disparities in health outcomes by year, health facility, health district and socio-demographic factors such as age, and sex. For instance, health risks for morbidity and mortality differ by age groups. Pneumonia, diarrhoea, septicemia and dehydration are significant causes of infant mortality. Children under the age of five usually die from diarrhoea and pneumonia. Inpatient deaths among all ages are mainly due to pneumonia, diarrhoea and tuberculosis.

Data on maternal mortality ratio show a decrease in maternal deaths per 100,000 live births between 2008 and 2009, from 195.60 to 184.5. Child size at birth is variable by sex and district. The percentage of infants with a birth weight under 2,500 grams constitutes 6.9 per cent of all births for males and 7.3 per cent for females, and it ranges from 5 per cent in South East District to 20 per cent in Gantsi and Chobe. It is also worth noting that while Botswana has good access to modern health services and infrastructure, there are disparities in terms of doctor/patient ratios. Most of the districts had a patient/doctor ratio of fewer than 300 patients per doctor with the exception of Kweneng East which had a patient/doctor ratio of more than 500 patients per doctor. The scarcity of doctors in certain areas has implications for efficient health care provision in the country.

The findings in this report are important for two reasons; first, the statistics convey valuable information about the health of Botswana society on a range of important indicators, secondly, the information could be useful for health planning, health management and program evaluation.

Female (000's)	9,1	9,4	10,7	11,5
Population Distribution (%)				
0-4	17.6	18.8	14.6	11.7
5-14	29.9	28.8	28.6	25
15-64	46.9	47.6	51.8	58.3
65 and older	5.6	5.1	4.9	5
Percentage of Females aged 15-49 (out of total females)	42.8	42.9	46.5	52.4
Dependency Ratio (per 1000)	113	110	93	71.5
Child-woman Ratio (per 1000)	759	819	602	430.1
Sex Ratio (Males per 100 Females)	84	89	92	93.8
Percentage Urban	9	17.7	45.7	54.2
Population Density (per km)	1	1.6	2.3	2.9
Crude Birth Rate (per 1000)	45.3	47.7	39.3	28.9
Crude Death Rate (per 1000)	13.7	13.9	11.5	12.4
Natural Rate of Increase (% per annum)	3.1	3.4	2.7	1.7
General Fertility Rate (per 1000 women aged 15-49)	189	210	161	106.9
Mean Age (years) at childbearing	30.5	30.6	30	30.3
Total Fertility Rate (births per woman)	6.5	6.6	4.2	3.3
Infant Mortality Rate	-	-	-	56
Child Mortality Rate	-	-	-	19
Under 5 Mortality	-	-	-	74
Life Expectancy at Birth (years)	55.5	56.5	65.3	55.6
Males	52.5	52.3	63.3	52
Females	58.6	59.7	67.1	57.4
Mean Age (years)	23.4	22.7	23	24.8
Males	22.6	22	22.4	24.2
Females	24.1	23.4	23.5	25.3
<i>Median Age (years)</i>	15	15.3	16.8	20.1
<i>Males</i>	13.5	15	16	19.4
<i>Females</i>	16.7	16.5	17.4	20.8

Source: National Census 1971, 1981, 1991 and 2001

Health facilities are grouped into health districts that coincide with selected census and administration boundaries. Each facility is assigned a unique 5-digit identification number. The first two digits designate the district; the third digit designates the type of facility, that is hospital, primary hospital, clinic and health post; and the last two digits represent each specific facility within a district. These codes are used for data processing.

Health personnel data are collected in the last month (December) of the reporting year. Previous year health personnel printouts for all units of the Ministry of Health are sent to the respective units to update to the current year. When we get back the printouts, we also update our database. This is actually the snapshot of the health staff at a particular point in time and as such, it does not show the staffing situation for the earlier months of the reporting year.

Outpatient data received from the periphery units are checked for missing information, that is, diagnosis entry and additions. Reporting facilities are also monitored to ensure they reported on monthly basis and if not, necessary follow-ups are made.

Inpatient data are first checked for missing variables such as diagnosis, age and sex. Facilities reporting are closely monitored and follow-ups are made where necessary. The data are coded according to the ICD-10th Edition (see Appendix 2) and then captured and analysed using microcomputers in the unit.

Mental health data are coded according to the ICD-10th Edition and then captured using microcomputers. Tabulation is done in SPSS.

1.2 Output

In general, information presented in this report gives data on national aggregates by age, region, facility; type of services rendered and reasons of visiting a Health facility (Diagnosis). Basic ratios and rates are calculated for certain variables. Data capturing and analysis are done using microcomputers in the unit by CsPro program and exported to SPSS for tabulation.

Article I. ICD 10 Chapters

In tabulating in-patient statistics, Botswana adheres to the Tenth International Classification of Diseases [ICD 10](see World Health Organisation, Manual of the International Statistical Classification of Diseases, and Causes of Death, Tenth Revision, Volume 1 and 2, Geneva, 2004)

The Basic Tabulation List containing 2 038 three - and four - digit rubrics is used to code and classify diagnoses.

A "rubric" is a term under which conditions, descriptions, diseases or disorders are classified. To help readers, each three-digit rubric from the List is cross referenced below to one of the 21 major chapters of ICD.

ICD10 Chapter : Basic tabulation list code

I. Infectious and Parasitic

- A00-A09 Intestinal infection disease
- A15-A19 Tuberculosis
- A20-A28 Certain zoonotic bacterial diseases
- A30-A49 Other bacterial diseases
- A50-A64 Venereal diseases
- A65-A69 Other spirochaetal disease
- A70-A74 Other diseases caused by chlamydiae
- A75-A79 Rickettsiosis
- A80-A89 Viral infections of the central nervous system
- A90-A99 Arthropod-borne viral fevers and viral haemorrhagic fevers
- B00-B09 Viral infections characterized by skin and mucous
- B15-B19 Viral hepatitis
- B20-B24 Human immunodeficiency virus (HIV) diseases
- B25-B34 Other viral diseases
- B35-B49 Mycoses
- B50-B64 Protozoal diseases
- B65-B83 Helminthiases
- B85-B89 Pediculosis, acariasis and other infestations

B90-B94 Sequelae of infectious and parasitic diseases

B95-B97 Bacterial, viral and other infectious agents

B99 Other infectious diseases

II. Neoplasms

C00-C14 Malignant neoplasm of lip, oral cavity and pharynx

C15-C26 Malignant neoplasm of digestive organs of peritoneum

C30-C39 Malignant neoplasm of respiratory and intrathoracic organs

C40-C41 Malignant neoplasm of bones and articular cartilage

C43-C44 Malignant neoplasm of skin

C45-C49 Malignant neoplasm of mesothelial and soft tissue

C50 Malignant neoplasm of breast

C51-C58 Malignant neoplasm of female genital organs

C60-C63 Malignant neoplasm of male genital organs

C64-C68 Malignant neoplasm of urinary tract

C69-C72 Malignant neoplasm of eye, brain and other parts of central nervous system

C73-C75 Malignant neoplasm of thyroid and other endocrine glands

C76-C80 Malignant neoplasm of ill-defined, secondary and unspecified

C81-C96 Malignant neoplasm, stated or presumed to be primary, of lymphoid, haematopoietic and related tissue

C97 Malignant neoplasms of independent (primary) multiple sites

D00-D09 In situ neoplasms

D10-D36 Benign neoplasms

D37-D48 Neoplasms of uncertain or unknown behaviour

III. Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism.

D50-D53 Nutritional anaemias

D55-D59 Haemolytic anaemias

D60-D64 Aplastic and other anaemias

- D65-D69 Coagulation defects, purpura and other haemorrhagic conditions
- D70-D77 Other diseases of blood and blood-forming organs
- D80-D89 Certain disorders involving the immune mechanism

IV. Endocrine, nutritional and metabolic diseases.

- E00-E07 Disorders of thyroid glands
- E10-E14 Diabetes mellitus
- E15-E16 Other disorders of glucose regulation and pancreatic internal secretion
- E20-E35 Disorders of other endocrine glands
- E40-E46 Malnutrition
- E50-E64 Other nutritional deficiencies
- E65-E68 Obesity and other hyperalimentation
- E70-E90 Metabolic disorder

V. Mental and behavioural disorders

- F00-F09 Organic, including symptomatic, mental disorders
- F10-F19 Mental and behavioural disorders due to psychoactive substance
- F20-F29 Schizophrenia, schizotypal and delusional disorders
- F30-F39 Mood (affective) disorders
- F40-F48 Neurotic, stress-related and somatoform disorders
- F50-F59 Behavioural syndromes associated with physiological disturbances and physical factors
- F60-F69 Disorders of adult personality and behaviour
- F70-F79 Mental disorders
- F80-F89 Disorders of psychological development
- F90-F99 Behavioural and emotional disorders with onset usually occurring in childhood and adolescence
- F99 Unspecified mental disorders

VI. Diseases of the Nervous system

- G00-G09 Inflammatory diseases of the central nervous system
- G10-G13 Systemic atrophies primarily affecting the central nervous system
- G20-G26 Extrapyrarnidal and movement disorders
- G30-G32 Other degenerative diseases of the nervous system
- G35-G37 Demyelinating diseases of the central nervous system
- G40-G47 Episodic and paroxysmal disorders
- G50-G59 Nerve, nerve root and plexus disorders
- G60-G64 Polyneuropathies and other disorders of the peripheral nervous system
- G70-G73 Diseases of myoneural junction and muscle
- G80-G83 Cerebral palsy and other paralytic syndromes
- G90-G99 Other disorders of the nervous system

VII. Diseases of the eye and adnexa

- H00-H06 Disorders of eyelid, lacrimal system and orbit
- H10-H13 Disorders of conjunctiva
- H15-H22 Disorders of sclera, cornea, iris and ciliary body
- H25-H28 Disorders of lens
- H30-H36 Disorders of choroids and retina
- H40-H42 Glaucoma
- H43-H45 Disorders of vitreous body and globe
- H46-H48 Disorders of optic nerve and visual pathways
- H48-H52 Disorders of ocular muscles, binocular movement, accommodation and
- H53-H54 Visual disturbances and blindness
- H55-H59 Other disorders of eye and adnexa

VIII. Diseases of the ear and mastoid process

- H60-H62 Diseases of external ear

H65-H75 Diseases of middle ear and mastoid

H80-H83 Diseases of inner ear

H90-H95 Other disorders of ear

IX. Diseases of the circulatory system

I00-I02 Acute rheumatic fever

I05-I09 Chronic rheumatic heart diseases

I10-I15 Hypertensive diseases

I20-I25 Ischaemic heart diseases

I26-I28 Pulmonary heart disease and diseases of pulmonary circulation

I30-152 Other forms of heart diseases

I60-I69 Cerebrovascular diseases

I70-I79 Diseases of arteries, arterioles and capillaries

I80-I89 Diseases of veins, lymphatic vessels and lymph nodes, not elsewhere

I95-I99 Other and unspecified disorders of the circulatory system

X. Diseases of the respiratory system

J00-J06 Acute upper respiratory infections

J10-J18 Influenza and pneumonia

J20-J22 Other acute lower respiratory infections

J30-J39 Other diseases of upper respiratory infection

J40-J47 Chronic lower respiratory diseases

J60-J70 Lung diseases due to external agents

J80-J84 Other respiratory diseases principally affecting the interstitium

J85-J86 Suppurative and necrotic conditions of lower respiratory tract

J90-J94 Other diseases of pleura

J95-J99 Other diseases of the respiratory sys

XI. Diseases of the digestive system

K00-K14 Diseases of oral cavity, salivary glands and jaws

K20-K31 Diseases of oesophagus, stomach and duodenum

K35-K38 Diseases of appendix

K40-K46 Hernia

K50-K52 Noninfective enteritis and colitis

K55-K63 Other diseases of intestines

K65-K67 Diseases of peritoneum

K70-K77 Diseases of liver

K80-K87 Disorders of gallbladder, biliary tract and pancreas

K90-K93 Other diseases of the digestive system

XII. Diseases of the skin and subcutaneous tissue

L00-L08 Infection of the skin and subcutaneous tissue

L10-L14 Bullous disorders

L20-L30 Dermatitis and eczema

L40-L45 Papulosquamous disorders

L50-L54 Urticaria and eczema

L55-L59 Radiation-related disorders of the skin and subcutaneous tissue

L60-L75 Disorders of skin appendages

L80-L99 Other disorders of the skin and subcutaneous tissue

XIII. Diseases of the musculoskeletal system and connective tissue

M00-M25 Arthropathies

M30-M36 Systemic connective tissue disorders

M40-M54 Dorsopathies

M60-M79 Soft tissue disorders

M80-M94 Osteopathies and chondropathies

M95-M99 Other disorders of the musculoskeletal system and connective tissue

XIV. Diseases of the genitourinary system

N00-N08 Glomerular diseases

N10-N16 Renal tubulo-interstitial diseases

N17-N19 Renal failure

N20-N23 Urolithiasis

N25-N29 Other disorders of kidney and ureter

N30-N39 Other diseases Of urinary system

N40-N51 Diseases of male genital organs

N60-N64 Disorders of breast

N70-N77 Inflammatory diseases of female pelvic organs

N80-N98 Non-inflammatory disorders of female genital organs

N99 Other disorders of genitourinary tract

XV. Pregnancy, childbirth and the puerperium

000-008 Pregnancy with abortive outcome

010-016 Oedema, proteinuria and hypertensive disorders in pregnancy, childbirth and the puerperium

020-029 Other maternal disorders predominantly related to pregnancy

030-048 Maternal care related to the fetus and amniotic cavity and possible delivery problems

060-075 Complications of labour and delivery

080-084 Delivery

085-092 Complications predominantly related to the puerperium

095-099 Other obstetric conditions, not elsewhere classified

XVI. Certain conditions origination in the perinatal period

P00-P04 Fetus and newborn affected by maternal factors and by complication of pregnancy, labour and delivery

- P05-P08 Disorders related to length of gestation and fetal growth
- P10-P15 Birth trauma
- P20-P29 Respiratory and cardiovascular disorders specific to the perinatal period
- P35-P39 Infections specific to the perinatal period
- P50-P61 Haemorrhagic and haematological disorders of fetus and newborn
- P70-P74 Transitory endocrine and metabolic disorders specific to foetus and newborn
- P75-P78 Digestive system disorders of fetus and newborn
- P80-P83 Conditions involving the integument and temperature regulation of fetus and newborn
- P90-P96 Other disorders originating in the perinatal period

XVII. Congenital malformations, deformations and chromosomal abnormalities

- Q00-Q07 Congenital malformations of the nervous system
- Q10-Q18 Congenital malformations of eye, ear, face and neck
- Q20-Q28 Congenital malformations of the circulatory system
- Q30-Q34 Congenital malformations of the respiratory system
- Q35-Q37 Cleft lip and cleft pala
- Q38- Q45 Other congenital malformations of the digestive system
- Q50-Q56 Congenital malformations of genital organs
- Q60-Q64 Congenital malformations the urinary system
- Q65-Q79 Congenital malformation and deformations of the musculoskeletal
- Q80-Q89 Other congenital malformations
- Q90-Q99 Chromosomal abnormalities, not elsewhere classified

XVIII. Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified

- R00-R09 Symptoms and signs involving the circulatory and respiratory system
- R10-R19 Symptoms and signs involving the digestive system and abdomen
- R20-R23 Symptoms and signs involving the skin and subcutaneous tissue
- R25-R29 Symptoms and signs involving the nervous and musculoskeletal system
- R30-R39 Symptoms and signs involving the urinary system

- R40-R46 Symptoms and signs involving cognition, perception, emotional state and behaviour
- R47-R49 Symptoms and signs involving speech and voice
- R50-R69 General symptoms and signs
- R70-R79 Abnormal findings on examination of blood, without diagnosis
- R80-R82 Abnormal findings on examination of urine, without diagnosis
- R83-R89 Abnormal findings on examination of other body fluids, substances and tissues, without diagnosis
- R90-R94 Abnormal findings on diagnostic imaging and in function studies, without diagnosis
- R95-R99 Ill-defined and unknown causes of mortality

XVII. Injury, poisoning and certain other consequences of external causes

- S00-S09 Injuries to the head
- S10-S10 Injuries to the neck
- S20-S29 Injuries to the thorax
- S30-S39 Injuries to the abdomen, lower back, lumbar spine and pelvis
- S40-S49 Injuries to the shoulder and upper arm
- S50-S59 Injuries to the elbow and forearm
- S60-S69 Injuries to the wrist and hand
- S70-S79 Injuries to the hip and thigh
- S80-S89 Injuries to the knee and lower leg
- S90-S99 Injuries to the ankle and foot
- T00-T07 Injuries involving multiple regions
- T08-T14 Injuries to unspecified parts of trunk, limb or body region
- T15-T19 Effects of foreign body entering through natural orifice
- T20-T32 Burns and corrosions
- T33-T35 Frostbite
- T36-T50 Poisoning by drugs, medicaments and biological substances
- T51-T65 Toxic effects of substances chiefly nonmedicinal as to source

- T66-T78 Other and unspecified effects of external causes
- T79 Certain early complications of trauma
- T80-T88 Complications of surgical and medical care, not elsewhere
- T90-T98 Sequelae of injuries, of poisoning and of other consequences of external causes

XVIII. External causes of morbidity and mortality

- V01-V09 Pedestrian injured in transport accident
- V10-V19 Pedal cyclist injured in transport accident
- V20 -V29 Motorcycle rider injured in transport accident
- V30-V39 Occupant of three-wheeled motor vehicle injured in transport accident
- V40-V49 Car occupant injured in transport accident
- V50-V59 Occupant of pick-up truck or van injured in transport accident
- V60-V69 Occupant of heavy transport vehicle injured in transport accident
- V70-V79 Bus occupant injured in transport accident
- V80-V89 Other land transport accidents
- V90-V94 Water transport accidents
- V95-V97 Air and space transport accidents
- V98-V99 Other and unspecified transport accidents
- W00-W19 Falls
- W20-W49 Exposure to inanimate mechanical forces
- W50-W64 Exposure to animate mechanical forces
- W65-W74 Accidental drowning and submersion
- W75-W84 Other accidental threats to breathing
- W85-W99 Exposure to electric current, radiation and extreme ambient air temperature
- X00-X09 Exposure to smoke, fire and flames
 - X10-X19 Contact with heat and hot substances
 - X20-X29 Contact with venomous animals and plants

- X30-39 Exposure to forces of nature
- X40-X49 Accidental poisoning by and exposure to noxious substances
- X50-X57 Overexertion, travel and privation
- X58-X59 Accidental exposures to other and unspecified fact
- X60-X84 Intentional self-harm
- X85-Y09 Assault
- Y10-Y34 Event of undetermined intent
- Y35-Y36 Legal intervention and operations of war
- Y40-Y84 Complications of medical and surgical care
- Y85-Y89 Sequelae of external causes of morbidity and mortality
- Y90-Y98 Supplementary factors related to causes of morbidity and mortality

XVII. Factors influencing health status and contact with health services

- Z00-Z13 Persons encountering services for examination and investigation
- Z20-Z29 Persons with potential health hazards related to communicable diseases
- Z30-Z39 Persons encountering health services in circumstances related to reproduction
- Z40-Z54 Persons encountering health services for specific procedures and health care
- Z55-Z65 Persons with potential health hazards related to socio-economic and psychosocial circumstances
- Z70-Z79 Persons encountering health services in other circumstances
- Z80-Z99 Persons with potential health hazards related to family and personal history and certain Condition influencing health status

Ward Midnight Census Form

This form is to be completed for each ward in the health facility, and sent to Health Statistics Unit one week after end of reporting month. See instruction on the back.

Morbidity, Mortality and Obstetric In-Patient Form

MH 017/Rev 2003

This form is to be used for in-patients in all health facilities regarding information on diagnosis/injuries, causes of death and obstetrics. Section (1) is used at admission. Section (2) at time of discharge and section (3) for obstetrics. See instruction on the back.

Facility:	Medical record number:
District:	Serial no.:

Section 1 Admission

Date of admission:	Ward/Doctor:
Patients Surname:	Re-admission: Yes: <input type="checkbox"/> No: <input type="checkbox"/>
Forenames:	Date of birth: Sex:
Nationality:	Occupation:
Patients address:	Chief: Headman:
Next of kin:	Next of kin (tel./address/relationship):

Section 2 Discharge

Discharge: Date:	Alive: <input type="checkbox"/>	Referral: <input type="checkbox"/>	Death: <input type="checkbox"/>
Treatment/operation:			

MORBIDITY Diagnostic information

Main condition:
Other conditions:

MORTALITY Cause of death

Cause of death		Approximate interval between onset and death
I Disease or condition directly leading to death* Antecedent causes Morbid conditions, if any, giving rise to the above cause, stating the underlying condition last	(a)	
		due to (or as a consequence of)
	(b)	
		due to (or as a consequence of)
	(c)	
		due to (or as a consequence of)
	(d)	
		due to (or as a consequence of)
II Other significant conditions contributing to the death, but not related to the disease or condition causing it.		

*This does not mean the mode of dying, e.g. heart failure. It means the disease, external causes of fatal injury, or complications that caused death.

Section 3 Obstetric

Date of delivery:	Gestation (duration of pregnancy):	weeks
Result of delivery	Single: <input type="checkbox"/> Multiple (number):	Sex (number): M F
Weight live birth (grams):	(if more than one)	
Number delivered:	Alive: Still birth: Premature: Full term:	
Method of delivery:		

Completed by Block letter	Designation	Telephone	Address, health facility	Date completed	Signature
