## Preface

This report follows our strategic resolve to disaggregate the 2011 Population and Housing Census report, and many of our statistical outputs, to cater for specific data needs of users. Therefore, data and commentary contained herein is one of a series of district profiles presenting disaggregated data to the level of villages, abstracted from the 2011 Population and Housing Census results.

For definitive interpretation, villages covered in this report are of 500 or more inhabitants. The analysis aims at providing ready information to facilitate planning and policy making. It therefore presents information on composition, distribution and gender.

In addition, it presents information on marital status, orphan-hood, and religion, access to water and sanitation, as well as sources of energy, among others. It is our sincere hope that information and analysis contained herein, is not only found to be very useful, but also ignites reciprocal engagements with data users to offer feedback on how forthcoming reports can be improved.

---

Proportion of Population 12 Years and Over who are Cohabiting		17.6
Proportion of Population 17 Years and Less with Mother Deceased		27.5
Proportion of Population 17 Years and Less with Father Deceased		58.8
Proportion of Population 17 Years and Less with Both Parents Deceased		13.7

## 1.0 Background and Commentary

The Population and Housing Census is the most representative form of enumeration since it covers as many people and variables as possible. It is the total enumeration of households throughout the country. The census is carried out after every ten (10) years in Botswana. This report covers indicators and counts of the 2011 census and makes comparisons, in some instances, with the previous census of 2001. There are two types of enumeration methods. One is the De Jure type and the other is the De Facto method. The De Jure method refers to the enumeration of population according to usual residence. It excludes visitors but includes absent residents. The De Facto method, on the other hand, refers to the enumeration of population according to where one spent the census night. It includes visitors but excludes absent residents.

The 2011 Population and Housing Census used the De Facto enumeration. An important aspect of the 2011 census is its wide disaggregation of information by the important variables of sex, gender and locality, among others. The disaggregation forms the basis of this report. The report presents information on localities that have 500 or more inhabitants.

### 1.1 Background to the Report

This report was necessitated by the need for disaggregated data at all levels. Statistics Botswana, with the assistance of the United Nations Population Fund (UNFPA), undertook work on producing geographically disaggregated and gender sensitive information.

### 1.2 Importance of the Report

The need to have data disaggregated to the district level cannot be over emphasised. District level data provides the base for socio-economic planning in the district, which would be consolidated to produce national development plans. Furthermore, there has been a data gap at districts. This data gap would then compel district planners to come up their own data, which may not be validated.

The report provides analysis of selected indicators for villages with a population of 500 and more people. However, in the districts where there are few "village" settlements, all the villages are included in the analysis. Otherwise small localities are lumped under "other". Moreover, small un-affiliated localities are lumped under "no affiliation".

## 2.0 Population Distribution

In terms of population distribution, the only sizable population concentrates were found in Tati Siding and Masunga at 13.6 percent and 9.4 percent respectively. The majority of the settlements in the district have a population of less than 1,000 people. Overall, the area is sparsely populated with an average density of 11.8 persons per square kilometre.

**Figure 2: Population Distribution by Age-Sex – 2001 and 2011**

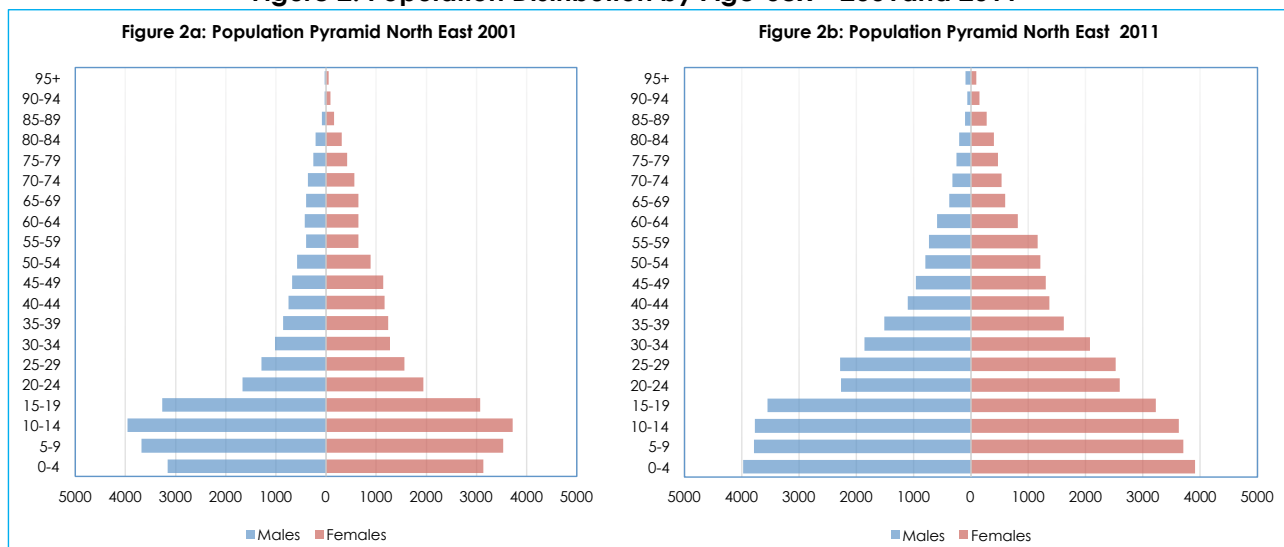

Figure 2 above shows a broad base structure. The population in 2011 PHC was more concentrated in the lower age groups than in the upper age groups. It is highly concentrated in the age groups 0-4 to 15-19. The population declines as the age increases.

## 2.1 Population Age Structure

The 2011 Population and Housing Census results show that 60,264 persons were enumerated in the North East Sub District, compared with 49,399 enumerated in the 2001 Population and Housing Census. The age composition of the district shows that the population is predominantly young. ; Children from ages 0-14 and the youth from 15-29 years constitute the majority of the population. The sex ratio in the North East Sub District favours females over males, estimated at 90.3 percent. The relatively high sex ratio is significant. It is attributed to the major economic mainstay in small localities due to arable and pastoral farming. However, the sex ratio varies across villages. The statistics reveal that it varied across the age brackets. The lower ages (00-29 years) were dominated by males. As the age increased, females tended to dominate the sex ratio.

## 2.2 Labour Force

Labour force is defined as the population aged 15 to 64 years regardless of whether they are currently engaged in any economic activity or not. This population constituted 67.9 percent of the sub district's population. Most villages in this sub district have around 50 percent of their population in the labour force. Masunga village had the highest percentage of persons in this age bracket at 71.0 percent followed by Tati siding at 63.0 percent. This was followed by Tsamaya, Tshesebe and Matsiloje at 59.9 percent, 59.3 percent and 59.1 percent respectively. The village of Jackalas No 2(42.7 percent) had the lowest percentage of people within the labour force.

## 2.3 The Youth

The youth are described as those aged between 18 and 35 years. This group made up 33.6 percent of the sub district's population. Masunga had the highest proportion of youths at 38.3 percent, followed by Tati Siding and Matshelagabedi at 31.7 percent each. Zwenshambe and Mbalambi has the lowest proportion of youths at 17.9 percent and 17.4 percent respectively.

## 2.4 The Elderly

The elderly population refers to those aged 65 years and above. The group is assumed to be economically inactive. It is also classified as a dependent group. A high proportion in this age bracket presents the country with a huge dependency burden, as this group has special needs, including special care and pensions, among others.

Overall, 7.8 percent of the North East Sub District's population were the elderly. This proportion is higher than the national average of 5.5 percent. The village of Moroka had the highest proportion of the elderly population at 11.1 percent, followed by Kgari at 10.5 percent. The village was closely followed by Nlakhwane (10.4 percent) Mosojane (10.3 percent) and Gulubane (10.1 percent). Masunga had the lowest percentage of the elderly population at 2.2 percent.

## 3.0 Language

The data displayed on Table 12 shows that the most dominant (46.4 percent) language spoken at home during the 2011 PHC in the North East Sub District was Ikalanga, followed by Setswana and Ndebele at 44.0 percent and 5.5 percent respectively. Other languages were also spoken in the two districts but to a lesser extent. These include Seyei, Sembukushu and Sesarwa. All were very insignificant accounting for less than 1 percent.

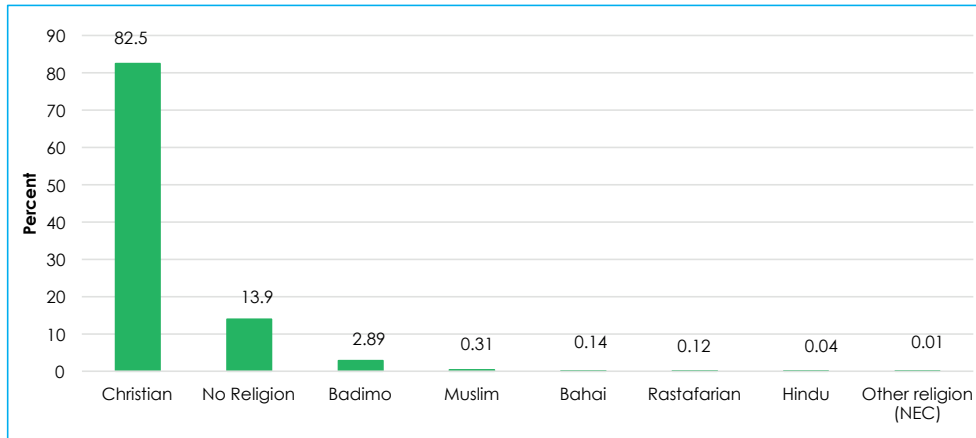

## 4.0 Religious Affiliation

A religion is defined as an organised collection of beliefs, cultural systems, and world views that relate humanity to an order of existence. Other scholars define religion as a collection of cultural systems, belief systems, and worldviews that establishes symbols that relate humanity to spirituality and, sometimes, to moral values<sup>1</sup>.

Figure 3 below shows that the highest proportion (82.5 percent) of people in the North East District indicated that they were Christians. This was followed by those who reported that they had no religion and those who followed Badimo at 13.9 percent and 2.9 percent respectively. Other religions such as Muslim, Bahai, Hindu and Rastafarianism contributed less than one percent each.

<sup>1</sup> The Free Dictionary by Farlex

**Figure 3 : Percentage of Population by Religion in North east District 2011**

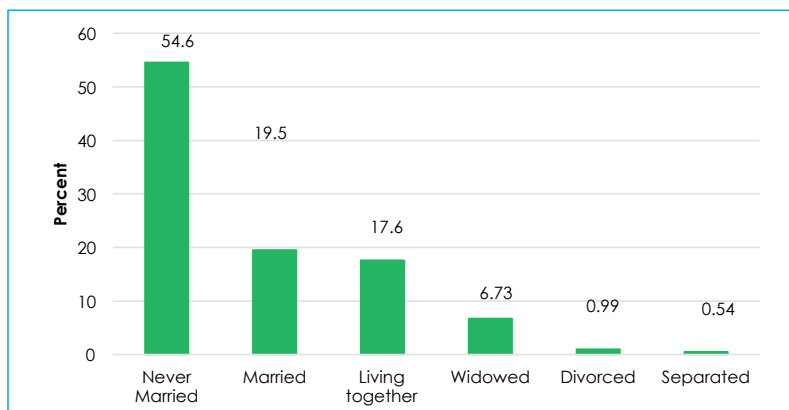

## 5.0 Marital Status

Under the Marriage Act which was amended in 2001, the legal age of marriage is 18 for both sexes, conditional on parental consent. Without parental consent, the legal age is 21. This age limit, however, does not apply to marriages contracted under customary or religious law.

However, in the 2011 Population and Housing Census, it was realized that some cultures contentiously allowed marriage at the ages of 12 years, despite the provision of the statutory instrument. Marital status was asked for persons aged 12 years and above. That is, whether they were in any union at the time of the census. Although the country's legal age of marriage is 18 years, there are still cultures where

**Figure 4 : Distribution of Marital Status - North East District**

young girls are married at ages below that, some as young as 12. One purpose of marriage is to create a stable home in which children can grow and thrive.

Figure 4 shows that during the 2011 PHC, only 19.5 percent of the population of the North East District reported to be in formal marriages. Furthermore, a significant number (54.6 percent) of the population were never married, while 17.6 percent were living together, followed by the widowed and divorced at 6.7 percent and about 1 percent respectively.

## 6.0 Disability

Disability may be generally defined as a condition which may restrict a person's mental, sensory, or mobility functions to undertake or perform a task in the same way as a person who does not have a disability.

The population of the sub district was assessed for its ability to see in one or two eyes, ability to hear in one or both ears, speaking, ability to use one or both legs, ability to use one or both arms and retardation. Although disability in the sub district was low, the most common form of disability was defects of seeing in one or both eyes as it affected 1.4 percent of the population. This form of disability

was more prevalent in Mambo where it affected 5.4 percent of the village population. The second most common form of disability in the sub district was inability to hear in one or both ears. It affected 0.63 percent of the sub district's population.

Disabilities may have far-reaching consequences at household and societal levels. These include increased need for care by the family; social relationships may be disturbed and the family structure may disintegrate; economic burdens on families may lead to poverty; low socio-economic level and low education lead to less development and lower productivity in society and the demand for care by the society/state may be increased<sup>2</sup>.

## 7.0 Employment and Unemployment

Employment was estimated for persons aged 15 years and above. The overall labour force for the sub district was 29,200 or 24.6 percent of the sub district's population. Overall, unemployment for the North East Sub District was estimated at 26.0 percent and showed that males had a lower unemployment rate than their female counterparts at 24.9 percent compared to 27.2 percent for females.

Table 11 shows that Gungwe had the highest unemployment rate at 53.8 percent, followed by Siviya at 53.2 percent. The lowest unemployment rate was recorded in Kalakamati and Moroka at 8.7 percent and 12.8 percent respectively.

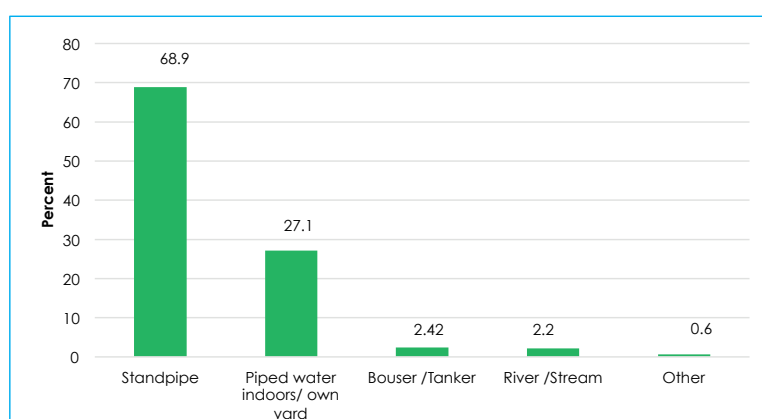

## 8.0 Household Size

The average household size in the North East District was 3.8 persons. Furthermore, the highest household size (4.91 persons) was recorded in Gungwe, followed by Mabudzane at 4.8 persons. The lowest household size (2.2 persons) was recorded in localities with no affiliation.

## 9.0 Access to Portable Water

Providing safe drinking water has been a priority for government since the early years of independence. As a signatory of the Millennium Declaration, Botswana is committed to ensuring that the majority of its population have access to improved water source. Improved water source refers to piped water indoors or outdoors, a neighbour's tap, a communal tap, a bowser or a tanker and a borehole. More than half (68.9 percent) of the population of the North East District had access to stand piped water. About 27.1 percent of the population reported to had access to stand piped water indoors.

**Figure 5 : Percentage Distribution by Source of Water- North East District 2011**

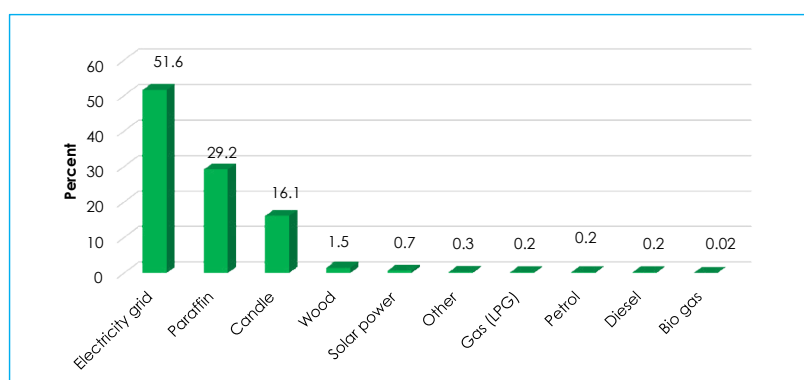

## 10.0 Source of Fuel for Lighting

Figure 6 shows that paraffin and electricity were the leading sources of energy for lighting for more than 80 percent of the sub district's households.

The most common sources of fuel for lighting in this district were candle and paraffin, which were used by more than one third of households. Candle was the leading source as it was used by 33.7 percent of the households, followed closely by paraffin at 33.6 percent. Only 20.8 percent of households used electricity.

Other sources of energy for lighting were used at less than 1 percent each by households in the sub district.

**Figure 6 : Distribution by Source of Lighting in North East District 2011**

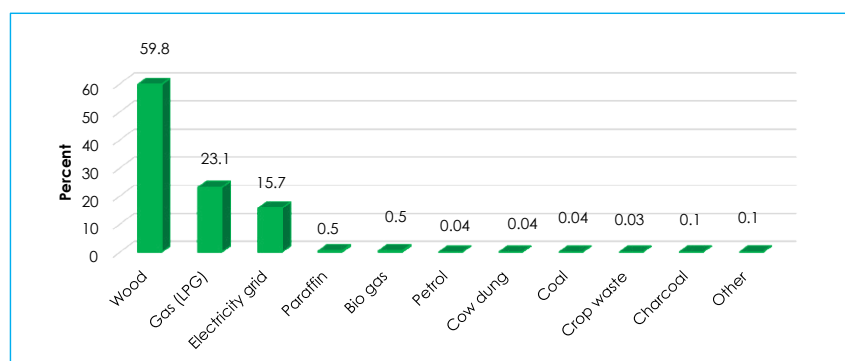

### 10.1 Source of Fuel for Cooking

Cooking energy accounts for about 90 percent of all household energy consumption in developing countries. Worldwide, 2.5 billion people use biomass fuels for cooking. These include firewood, charcoal, dung and agricultural residues. Biomass fuels are often the only available energy source, especially in rural areas. In most Sub-Saharan countries, more than 80 percent of the population use biomass fuels for their daily cooking<sup>3</sup>.

Figure 7 below shows that in the North East District, wood was by far, the most used source of energy for household cooking. It was used by 59.8 percent of households in the district. This was followed by households that used gas (LPG) and the electricity grid by 23.1 percent and 15.7 percent respectively. The use of firewood for cooking was highest in the rural villages where other alternatives are limited.

**Figure 7 : Percentage Distribution By Source of Cooking - North East District 2011**

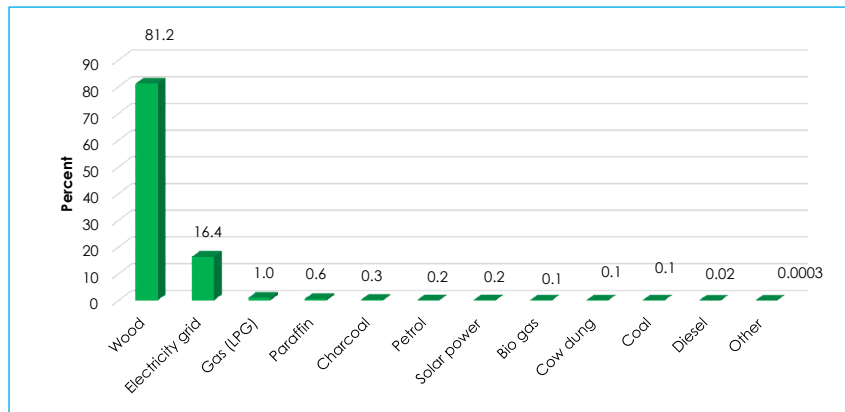

### 10.2 Source of Fuel for Heating

In a home the heating system normally serves two purposes. The primary purpose of heating is to maintain warm temperatures within the home during colder months. Keeping a house warm is important for the occupants of the home as well as the structure itself. The secondary purpose of a heating system is to heat domestic hot water for usage during all months of the year.

Just like cooking, wood was by far the most common fuel used for domestic or household heating. It was used by 81.2 percent of the sub district's households. It was observed that some households used electricity (16.4 percent) for heating. Other sources of heating were each used by less than 1 percent of households in the North East District.

<sup>3</sup> GTZ, 2014. Cooking Energy: Why it really matters if we are to halve poverty by 2015.

**Figure 8 : Percentage Distribution by Source of Fuel for Heating in North East District 2011**

## 11.0 Orphan-hood

The United Nations Children's Fund (UNICEF) and global partners define an orphan as a child who has lost one or both parents. Evidence clearly shows that the vast majority of orphans are living with a surviving parent, grandparent, or other family member. A further 95 percent of all orphans are over the age of five.

This definition contrasts with concepts of orphan-hood in many industrialised countries, where a child must have lost both parents to qualify as an orphan. UNICEF and numerous international organisations adopted the broader definition of orphan in the mid-1990s as the AIDS pandemic began leading to the death of millions of parents worldwide, leaving an ever increasing number of children growing up without one or more parents. So the terminology of a 'single orphan' – the loss of one parent – and a 'double orphan' – the loss of both parents – was born to convey this growing crisis<sup>4</sup>. Botswana defines an orphan as a child aged below 18 who has lost one or both parents.

**Figure 9: Distribution of Orphans by Type in North East District 2011**

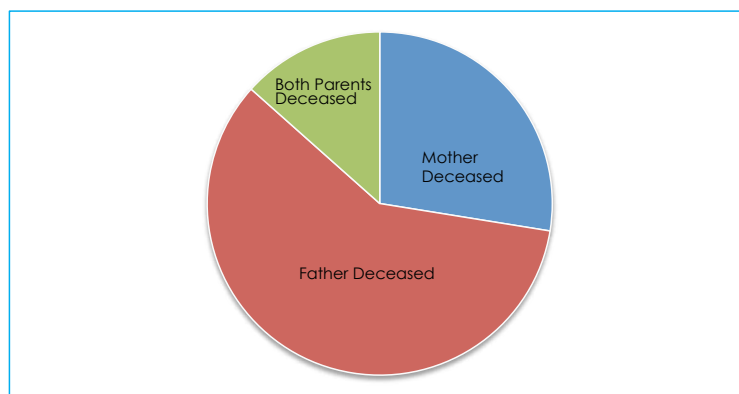

Figure 9 shows that more than half (59 percent) of orphans had lost a father but with the mother surviving. About 14 percent had lost both parents<sup>5</sup>.

## 12.0 Projected Population 2011 – 2026

The population of the district was estimated to have grown between 2001 and 2011. It is estimated that by 2026, the population of the sub district will reach 78,366. This will be an addition of 18,102 inhabitants, an increase from the 2011 figure of 60,264.

**Figure 10: Projected population of North East District 2011-2026**
