## BOTSWANA INTERNATIONAL MERCHANDISE TRADE STATISTICS

Monthly Digest - February 2016
No. 2016/04

## Preface

This International Merchandise Trade Statistics (IMTS) Monthly Digest presents statistics on Botswana's total imports and exports of goods at the end of February 2016. This digest follows the January 2016 Digest published at the end of March 2016. Data is complete up to February 2016. Statistics Botswana receives new data on a monthly basis, and there is continuous data editing as various tables and reports are produced. The database is therefore updated from time to time. As a result of editing and revision of data, figures on previous Monthly Digests and those on the current Monthly Digest (for the corresponding months) may differ.

Changes in data for corresponding months when comparing the current digest and the previous ones, may also be attributed to data from transactions which had deferred customs duty assessments. The data for these transactions will only become available at a later stage after customs duty assessments have been completed.

This Monthly Digest presents summaries of Total Merchandise Trade from January 2012 to February 2016 as presented on Table 1. Trade by Principal Commodity groups is presented on Table 2.1 for imports and Table 2.2 for exports. Table $\mathbf{2 . 3}$ gives trade on diamonds only. Direction of trade is given for the recent twelve months and this appears on Tables 3.1A and 3.2A for imports and exports respectively. Tables 3.1B (imports) and Table 3.2B (total exports) present Principal Commodity groups by partner and region for February 2016 only.

Five graphical presentations appear in this digest. Chart 1.1 shows imports, total exports and trade balance from January 2009 to February 2016. Charts 2.1 and 2.2 show Principal Commodity groups for imports and exports respectively, for February 2016 only. Charts 3.1 and 3.2 show imports and exports by major trading partners for the month under review.

Tables 4.1; A \& B present Statistics on commodities that were mostly imported for the months of January 2016 and February 2016 respectively, while exports are given on Tables 4.2; A \& B for the same months. Trade at Chapter Level (2 digits of the Harmonized Commodity Description \& Coding System) appears on Table 5, giving data for January 2016 and February 2016.

Table 1 distinguishes domestic exports from re-exports while other tables show total exports only, which is the sum of the two (domestic exports and re-exports).

### 1.0 TOTAL TRADE

Total merchandise trade as presented in this section refers to imports, domestic exports, re-exports and trade balance.

### 1.1 Data Revision

Table A presents revised data for November and December 2015 as well as January 2016. Imports for January 2016 increased by 0.8 percent (P32.9 million), mainly because of data from transactions that had deferred customs duty assessment.

Total Exports for December 2015 and January 2016 show slight increases of 0.1 percent (P4.3 million) and 0.4 percent (P25.0 million) respectively, when comparing figures from the January 2016 and February 2016 digests, which could be as a result of corrections of errors and omissions.

## Discussions on Sub-Sections $\mathbf{1 . 2}$ to 1.4 are based on Table 1.

### 1.2 Imports

Discussions on imports are based on cost, insurance and freight (CIF) value and associated figures are presented on Table 1. February 2016 total imports were valued at P5, 852.6 million, showing an increase of 47.7 percent ( $\mathrm{P} 1,890.9$ million) from the January 2016 revised value of $P 3,961.7$ million. This is attributable to the high value of diamond imports for aggregation, during February 2016 as compared to imports of the same commodity during January 2016.

Comparison of February 2016 import figure to February 2015 import value shows a decrease of 12.7 percent (P854.9 million), from P6, 707.5 million recorded during February 2015 to P5, 852.6 million recorded during the reference month. The decrease in import value in this case is mainly due to the low value of diamond imports for aggregation when comparing the two months.

### 1.3 Total Exports

In February 2016, total exports were valued at P6, 401.9 million, showing a decline of 8.6 percent (P604.2 million) from the January 2016 revised value of P7, 006.1 million. The decline was as a result of less export of rough diamonds during the current period. Total exports for February 2016 show a rise of 20.9 percent (P1, 108.2 million) from the February 2015 value of P5, 293.7 million.

### 1.4 Trade Balance

February 2016 shows a trade surplus of P549.3 million.
Chart 1.1: Total International Merchandise Trade - January 2009 to February 2016 (Million PULA)

### 2.0 TRADE BY PRINCIPAL COMMODITIES

Principal commodity groups refer to selections of related commodities grouped together to form major groups. Commodities forming a group may be of related chapters, for example; "Machinery \& Electrical Equipment" which combines machines and electrical appliances; "Vehicles \& Transport Equipment" which combines vehicles and other equipment used for transport purposes.

In some cases it becomes challenging to come up with further groups of related chapters or commodities. This occurs when commodity groupings' contributions to the total remain minimal. In such cases, the commodities are grouped together under the general category called "Other".

### 2.1 Principal Imports

Imports by Principal Commodity Groups together with associated percentage distributions, appear on Table 2.1, covering January 2012 to February 2016. Percentage distributions are however only shown for totals of the years 2014 and 2015, as well as for January and February 2016. Chart 2.1 gives graphical presentation of Principal Import Commodity groups for February 2016 only.

Composition of imports by principal commodities for February 2016 shows that Diamonds contributed the most to total imports (P5, 852.6 million), with 41.5 percent (P2, 430.1 million), followed by Machinery \& Electrical Equipment with 11.0 percent ( P 645.9 million); Food Beverages \& Tobacco with 9.9 percent (P581.2 million), Fuel with 9.4 percent (P547.7 million) and Chemical \& Rubber Products with 7.9 percent (P461.8 million). Percentage distributions for February 2016 for other commodity groups can be seen on Table 2.1.

Chart 2.1: Principal Imports Composition - February 2016

Note: Other Goods include all Other Goods not specified as in Table 2.1

### 2.2 Principal Exports

February 2016 total exports were valued at P6, 401.9 million, with 85.2 percent (P5, 453.9 million) attributed to exports of Diamonds. These exports consist of diamonds from diamond polishing companies as well as those from the aggregation process.

Copper Nickel, Machinery \& Electrical Equipment and Meat \& Meat Products contributed 6.6 percent (P420.0 million), 2.5 percent (P162.1 million) and 1.3 percent (P81.7 million) respectively, to total exports during the month under review.

Percentage distributions for major export groups can be observed on Table 2.2, while Chart 2.2 gives graphical presentation for February 2016 only. Total exports discussed here are the sum of domestic exports and reexports.

Chart 2.2: Principal Exports Composition - February 2016

Note: Other Goods: include all Other Goods not specified as in Table 2.2

### 3.0 TRADE BY REGION AND MAJOR PARTNERS

Direction of trade gives imports by source while exports are presented by last known destination. Only major trading partners are considered individually, while smaller trading partners are grouped together under a general category. Data for the most recent twelve months appear on Table 3.1A for imports and Table 3.2A for exports, while data by region, major trading partners and principal commodities for imports and exports appear on Table 3.1B \& Table 3.2B respectively.

### 3.1 Imports by Region and Major Trading Partners

Imports for February 2016 were valued at P5, 852.6 million, with South Africa contributing 61.2 percent (P3, 582.3 million), while Namibia contributed 13.0 percent (P758.0 million).

During the month under review, the European Union (EU) supplied imports valued at P248.4 million, accounting for 4.2 percent of total imports. The main supplier of imports from this region was Belgium, having contributed 2.2 percent (P126.7 million) while Germany supplied 1.0 percent (P60.1 million) of total imports during the same period. Canada supplied 11.4 percent (P666.3 million) of total lmports during the month under review.

Asia as a region, supplied imports valued at P395.0 million, representing 6.7 percent of total imports during February 2016. Israel contributed 2.2 percent ( P 128.4 million) while China supplied 1.6 percent (P94.5 million) of total imports during the same period.

Imports at regional and country level (for major trading partners) are presented on Table 3.1A; however, percentage distributions do not form part of this table. Chart 3.1 gives the graphical presentation of major trading partners for February 2016 only.

Chart 3.1 shows that South Africa, Namibia and Canada supplied most imports at 61.2 percent, 13.0 percent and 11.4 percent respectively. These are the three countries that supply imports of diamond for aggregation and this is further supported by values of diamond imports from these three countries as displayed in Table 3.1 B.

Chart 3.1: Imports by Major Trading Partners-February 2016

### 3.2 Exports by Region and Major Trading Partners

Total exports for February 2016 were valued at P6, 401.9 million, with 32.8 percent ( $\mathrm{P} 2,098.0$ million) destined to SADC. South Africa and Namibia received 16.2 percent ( $\mathrm{P} 1,034.1$ million) and 15.6 percent ( P 998.0 million) respectively, of total exports during the month under review.

Asia as a block received exports valued at P1, 845.4 million, representing 28.8 percent of total exports (P6, 401.9 million) during February 2016. India, Singapore and Israel received most of the exports destined to Asia during the month under review, having received 10.9 percent ( P 697.2 million), 5.8 percent ( P 371.0 million) and 5.5 percent ( P 354.5 million) respectively, of total exports.

Exports destined to the EU were valued at P1, 416.9 million, representing 22.1 percent of total exports during the period under review. Belgium received most exports destined to EU, having received 20.2 percent (P1, 294.8 million) of total exports during February 2016.

Other countries that received significant portions of Botswana exports during the month under review include Canada, Norway and the United States of America (USA), having received 8.7 percent (P553.9 million), 5.4 percent ( P 343.0 million) and 1.3 percent ( P 82.6 million) respectively.

Other destinations for exports can be observed on Table 3.2A; however, percentage distributions do not form part of the table. Chart 3.2 gives the graphical presentation of major trading partners for February 2016 only.

Chart 3.2 shows that exports are mainly destined to Belgium ( 20.2 percent), South Africa ( 16.2 percent), Namibia ( 15.6 percent) and India ( 10.9 percent). These are the main destinations for diamond exports. Some significant portions of diamond exports go to Canada, Singarepore and Israel as can be seen on Table 3.2 B. Exports to Norway consist of Copper/Nickel mainly.

### 5.0 TECHNICAL NOTES

IMTS are compiled by the International Merchandise Trade Statistics Section of Statistics Botswana. International Merchandise Trade refers to external trade in goods only. International Service Trade Statistics (ISTS) are however not compiled by this section. The primary source of international merchandise trade data is the Customs \& Excise Division at the Botswana Unified Revenue Service (BURS). The Customs \& Excise Division is responsible for data capture for both computerized and manual borders, and the monthly raw data files are transferred to Statistics Botswana for data processing.

Until the April 2009 Monthly Digest, Botswana was practicing Relaxed Special Trade Type. The Relaxed Special Trade Type takes into account goods that are exported or imported for inward or outward customs processing while the Strict Special Trade Type does not include the same. Strict Special Trade Type comprises imports for home consumption, permanent exports, re-exports and goods cleared out of warehouse (ex-warehouse) only.

In June 2009, the Botswana External Trade Database was revised to cater for General Trade Type as per the United Nations Statistics Division (UNSD) recommendations. The General Trade Type gives complete coverage of external trade as compared to the Special Trade Type. As a result of this, trade reported in the monthly digests for May 2009 onwards is based on the General Trade Type.

Imports are valued CIF (cost, insurance \& freight) while exports are valued FOB (free on board). The value of imports includes transport and insurance costs to the importing country. The Exports value consists only of the value of goods as they leave the exporting country.

### 5.1 Time of Recording of Trade

IMTS is compiled using date of recording of trade as opposed to date of assessment of goods by customs. This means that as goods cross the border, trade is recorded and this is the reference month for compilation of IMTS. Some of these goods may however be held by customs for some time pending final assessment for tax or duty purposes.

If the final assessment is done later, for example two or three months, or even more, after the goods had crossed the border, the affected trade will then update trade for the particular month when the goods crossed the border, therefore it does not form part of trade for the month during which the final assessment was done. This is mostly common with imports. Revision of data for the month preceding the one under review will normally show high values as compared to revisions for other months due to more goods (from the previous month) being released after final assessment.

### 5.2 Concepts and Definitions

Domestic Exports: These are goods originating from the compiling country, being permanently exported out of the country for consumption in the outside world. This includes products from customs inwards processing; for example, if a country imports wheat, processes the wheat into bread flour and exports the bread flour and bye products from the milling process, these will all leave the country as domestic exports.

Re - Exports: These are exports of foreign goods that were initially recorded as imports into the compiling country. These goods are exported in the same state that they came in except for wear and tear. An example will be re-exportation of a motor vehicle that was initially imported into the compiling country and after being used it is now being exported to a foreign country.

Total exports: This is the sum of domestic exports and re-exports
Imports: These are goods imported from the outside world, into the compiling country, for local consumption. This includes re-importation of locally produced goods that were initially exported and are now being imported back into the country.

Trade Balance (Net Export): This refers to the total value of goods exported minus the total value of goods imported by a given economy in a given period of time. A positive trade balance (trade surplus) indicates that a country is exporting more in value terms than it is importing. A negative trade balance (trade deficit) indicates that the country is importing more than it is exporting.

### 5.3 Treatment of Diamonds from Aggregation Process

In July 2012, the Diamond Trading Company International which was undertaking aggregation of diamonds relocated from the United Kingdom to Botswana. This meant that the process of aggregation of diamonds was now to be done in Botswana. Following the relocation, initially it was not clear how this trade was to be recorded as there was no prior common understanding of the processes involved between all the relevant parties. After thorough discussions with key stakeholders, Statistics Botswana decided to record this trade as imports for processing and that export of the same after aggregation be recorded as direct permanent exports. This was based on IMTS 2010 Compilers' Manual (Page 225) and IMTS 2010 Concepts \& Definitions;
Page 16; Paragraph 1.20 concept that mixing of goods of different qualities to produce goods of a new quality is part of processing in compilation of IMTS.

### 5.3.1 Sorting out Diamonds imports

These imports will mainly be from Canada, Namibia and South Africa. Some of these may include diamonds that were originally bought from Botswana and are now being sold back to Botswana. The original declaration will not indicate whether the consignment is a mixture of diamonds from various countries. However, a followup document, referred to as "attached document" will show a disaggregation of these imports according to the various countries that contributed to the consignment.
I. In case the consignment was from one country, this will be recorded as imports into Botswana from that particular country
II. In case the consignment was from various countries, the recording of these imports will be according to the various countries that contributed to the consignment
III. If part of the consignment was originally from Botswana, that part is recorded as re-import and will form part of total imports.

### 5.3.2 Sorting out Diamonds exports

These exports will be from the aggregation process and will consist of exports of Botswana origin and exports of diamonds that were originally imported. The original declaration will give an aggregated export which will be a consignment bought by an individual trader. This consignment will consist of diamonds of the same colour, shape and size but originating from various countries. The "attached document", giving a disaggregation of the consignment in value and carats by countries that contributed, will be used to record trade accordingly. As per IMTS 2010 Concepts \& Definitions, goods resulting from processing are to be included in merchandise trade at their full value and as direct permanent exports (Domestic exports) in case they are exported (IMTS Concepts \& Definitions; page 16, paragraph 1.20). As a result of this, diamonds that originated from outside Botswana as well as those originating from Botswana are recorded as direct permanent exports or domestic exports.

Both diamonds originating from Botswana and those that originated from elsewhere have always been recorded under Domestic Exports. There was however an error in the explanation notes provided in the January 2015 IMTS Digest with regard to how these are recorded. The error was that diamonds that originated from elsewhere are recorded as re-exports and the correction is that they are exported as direct permanent exports or domestic exports. Values for diamonds that originated from elsewhere can be provided separately if needed.

### 5.4 Exclusions from IMTS

## - Goods in Transit

This is trade that is simply passing through the compiling country solely for the purpose of being transported to another country

## - Goods temporarily admitted or dispatched

These are goods that at the time of admission/dispatch, are intended to stay in the receiving country temporarily and that after their stay they will be returned in the same state. These goods include display equipment for trade fairs and exhibitions, commercial samples, means of transport, containers, equipment for working etc.

- Monetary Gold

This is gold to which the monetary authorities have title and is held as reserve assets.

- Issued banknotes and securities and coins in circulation

These goods represent evidence of financial claims and are excluded from IMTS
The above list of exclusions from IMTS is however not exhaustive and only a few that are common, simple, straightforward and easy to understand have been picked as examples.
